Famous among photographers—

PORTLAND Head Light, pictured above, is one of the most famous photographic subjects on the picturesque coast of Maine.

And, among critical photographers everywhere, Ansco Cykora is one of the most famous enlarging papers. They like it, and you'll like it, for the way it helps bring out the best in your negatives.

The distinctive quality of Cykora prints makes for more appealing portrait and exhibition enlargements.

Try Cykora. You'll like it. **Ansco, Binghamton, New York.**

"VELOUR BLACK"

TO BRING OUT THE HIDDEN EXTRAS THAT TELL A BETTER STORY

First school days are camera days . . . that day, for instance, when a little boy turns away from the complete freedom of babyhood and takes his first step toward manhood.

That picture may not be a salon winner . . . but it's the grand prize winner in your own collection. It's a better picture, too, because it is printed on "Defender Velour Black" projection paper. Details in highlight and shadow alike are there to give the picture distinction, to recreate the full meaning of the scene. It's all there, because of the complete range of tones "Velour Black" is capable of reproducing.

When you have a great picture in your camera, make sure that you have "Velour Black" on your darkroom shelf. Your dealer has it in the distinctive blue and yellow package.

PICTURES OF PEOPLE 62-74

People at work, people at play—friends, relatives, strangers; all these are grist for the photographic mill. People rank up front among the list of subjects which photographers find most engrossing. And so we bring to you this month, people's pictures.

FEDERAL'S NEW 4x5 ENLARGER

COMPLETE WITH OCTAR 4 ELEMENT ANASTIGMAT LENS

$112.50 TAX INCLUDED

Once again FEDERAL—Makers of "America's Fastest Selling Enlargers"—leads the field with an entirely new and expanded line of enlargers—incorporating many new features designed to give "Photo Fans", as always, *the most for their money.*

Not only do these 4 new Federals now cover negative sizes from miniature to 4" x 5", but they embody design ideas that anticipate the latest trends in enlarging;—*color photography and variable contrast paper control.*

Whether you are a beginner or professional you'll be completely sold on Federal when you experience the advantages of these features—

- New novel self-ventilating and cooling lamp house
- New combination negative carrier-color filter and mask holder with built-in focusing target
- New plastic-coated double extension bellows
- Calibrated swivel head with automatic stops at 0 and 90 degrees*
- New universal size removable lens board—new precision mounted special enlarger lenses
- New concealed spring counter balance*
- Removable red filter. Holder accepts series VII ring mount 1 5/16"
- New hand size control knobs with micro-friction drive
- New hand clutch for finger control positioning
- All metal construction that assures perfect alignment and freedom from vibration
- New non-warping, roomier, reinforced steel baseboard

*Included on all models except No. 312

Canadian Distributors: Canada Photo Products, Ltd., 137 Wellington St., West Toronto 1, Can.

COURTESY OF METROPOLITAN MUSEUM OF ART

BOLEX H-16
illustrated here employs the famous Kern-Paillard, Switar 1" f/1.4, Yvar 3" (telephoto) f/2.5, and Yvar 15mm (wide angle) f/2.8 lenses. Other lenses are also available.

In the 18th Century, gentlemen of fashion and wealth carried the "Necessaire" as part of their traveling equipment. This was a rather elegant accessory which contained, in addition to a clock, bottles and compartments for toiletry and shaving needs. The "Necessaire", wrought of gold and encrusted with jewels is an outstanding specimen of old craftsmanship.

Today, tens of thousands of people, from all walks of life, carry a Bolex motion picture camera with them to record daily happenings or notable scenes which they wish to record and keep. And Bolex never fails because Bolex, built in the world famous Paillard factories, is made in the best traditions of modern as well as time-honored craftsmanship. Just as in generations gone by, present-day Paillard craftsmen take deep pride in the products they create. From the tiniest gears to the completion of the beautiful case, there is, in every Bolex, the kind of craftsmanship that spells dependability which, in turn, means faultless movies and long years of trouble-free performance.

Only Bolex cameras . . . Models H-8 and H-16 . . . provide frame counters, automatic threading, parallax-correcting viewfinders, filming by hand crank, "still" mechanism, magnified critical visual focusing, and other exclusive advantages. If you want economy, if you want simplicity, if you want beauty, if you want a camera which produces the finest movies, see your photographic dealer, ask for, and insist on Bolex. Write for free illustrated catalog.

Miracle of Photography in Modern Industry

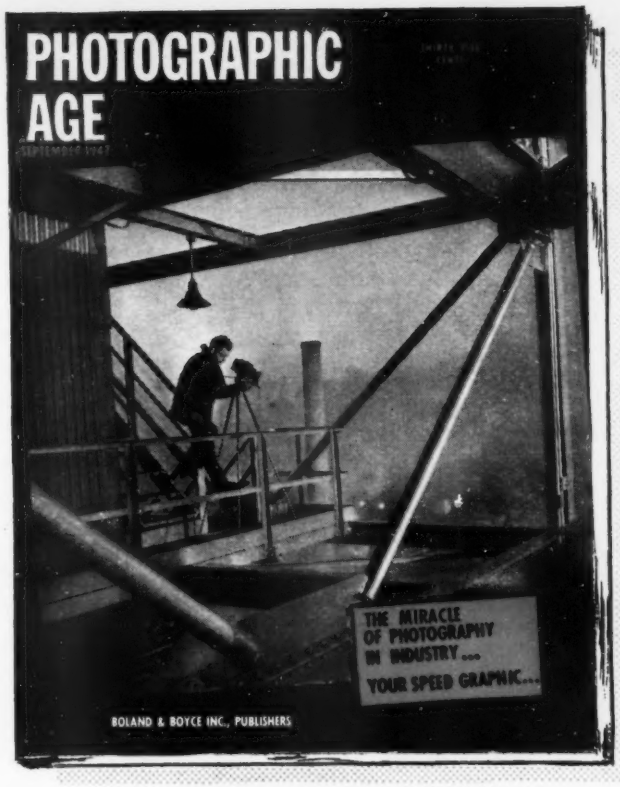
Presenting photography in its exciting new adaptations . . . describing new concepts and discoveries that are making photography the biggest new factor in business and industry today . . . Photography as you want to read about it. This article shows the entirely new developments in the new fields of photographic achievement. Business and industry now spend over $100,000,000 on these new uses of photography. It is a production and research tool in industry and engineering . . . photography is a force in our lives bigger than electronics! Take advantage of the NEW opportunities in photography. Send in your subscription to PHOTOGRAPHIC AGE today.

Your Speed Graphic

A complete technical description and all the uses of the remarkable Speed Graphic. Here you will find a thorough explanation and analysis of this camera. All its varied uses are described and all operating data are compiled into an article that is a fascinating story to all photographers. Indeed, this article makes the September issue a permanent reference for your library!

PHOTOGRAPHIC AGE is inaugurating a new group of articles on cameras and other equipment. For the purpose of helping you select new equipment and discover more uses and adaptations of that which you already have, these articles will be invaluable.

Send in for your first issue of PHOTOGRAPHIC AGE today.



Articles such as these

MONTH AFTER MONTH!

- COLOR PHOTOGRAPHY - BASIC THROUGH ADVANCED
- LIGHTING FOR ALL PURPOSES
- DARKROOM OPERATION
- ARTICLES AND SYMPOSIUMS ON ALL EQUIPMENT
- SUCCESS STORIES IN PHOTOGRAPHY
- CONSTRUCTION OF STUDIO AND LAB EQUIPMENT
- STORIES OF PHOTOGRAPHY IN BUSINESS & INDUSTRY
- KNOWING THE CHEMISTRY IN PHOTOGRAPHY
- BETTER PICTURES . . . FROM VIEW FINDER TO FINAL PRINT

Photography is an asset to ANY department in EVERY type of business. No matter what your position is . . . photography IS WORKING for you!

MANAGEMENT . . . Your company can use photography in hundreds of ways with much greater efficiency, profit, and prestige.

ADVERTISING . . . Photography is modern advertising's greatest tool.

SALES . . . The coming method of selling everything from needles to tractors. Controlled sound and vision selling through movies is being utilized by every company today.

ENGINEERING . . . Photography is a means of research into formerly inaccessible regions. It is an aid in styling and development of designs—a means of faster and more accurate planning.

RECORDS . . . All the facts and figures in a filing cabinet are condensed into your pocket or desk drawer through microfilming.

PRODUCTION . . . Photography will be used in the actual manufacture of every product by 1950!

TRAINING . . . In employee-training and orientation the ONLY thorough method is through films.

QUALITY-CONTROL . . . Photography is magic in it's ability to detect flaws. It saves lives, time, integrity and money through accurate inspection.

PRESS

By A. J. EZICKSON

AN AMATEUR photographer again has scored a page one picture scoop. He is Peter Cocchio, 27, of Brooklyn, who obtained the first photo when the giant United Airlines "Mainliner" exploded and crashed in flames, killing 41 passengers and two of the crew on a takeoff from La Guardia Field in New York. A civilian employe of the Army Air Base at Newark, N. J., Cocchio was a night student at the Academy of Aeronautics at La Guardia when the plane crashed. An eyewitness of the disaster, he grabbed his camera, ran out of the building and saw a trail of fire—burning gasoline—leading across the nearby Grand Central Parkway to a marsh where the airliner had come to a halt.

By then the plane was aflame from nose to tail. With the one negative he had left in his camera, Cocchio took a closeup shot. The spectacular picture later showed the pilot, Capt. B. R. Baldwin, who had staggered out of the burning wreckage, silhouetted against the flaming plane. Cocchio related how he and other students helped the pilot into the school building and gave him preliminary first aid. Cocchio returned to the wreck to aid in rescue work, but the heat and flames were so bad it was impossible to approach the wreckage. He then rushed with his camera containing the one exposed film to the *New York Mirror* office where it was immediately processed and printed. It was a perfect shot—given a double-page spread in an early edition.

Ray Mills (right) of International News Photos, newly elected president of the Miami Press Photographers Association, is shown accepting the gavel from retiring president Michael Ackerman of Acme. Other officers elected are: Stephen Cresse, Ft. Lauderdale News, vice-president; Ernie Bennett, Miami News, secretary; Ted Frutkoff, Turf Pix, treasurer; William Kuenzel, Miami Herald, marshal, and Ed Killingsworth, assistant secretary.

THE law in Brooklyn deals harshly with persons who attack working news photographers. Magistrate Charles F. Murphy held three Brooklynites for trial after they had assaulted cameramen William Meuer of the *New York Daily News;* Harry Hirsch, *New York Daily Mirror,* and Seymour Zolotorofe, *New York Journal-American.* The photographers were taking pictures of Irving Cohen, who was awaiting sentence for grand larceny in the Mergenthaler Linotype Company swindle, when three relatives of Cohen rushed toward the cameramen and began to attack them. When the defendants, Norman Cohen, Sanford Cohen, and Samuel Okun, were brought before him in Week-End Court, Brooklyn, Magistrate Murphy refused to allow them to explain their actions to the court. "Not while I'm around," said Magistrate Murphy. "Do you think these men should risk their lives when some goon takes it into his head to beat them up? I have found that newspaper men and newspaper photographers are not only friends of mine but are friends of the people."

Acme

Margaret Mohlin, 20, chosen "Miss Photoflash of 1947" by the Chicago Press Photographers Association, is shown at Columbia Studios in Hollywood with Jean Louis, Columbia stylist, getting a fitting in one of the gowns she will wear as she plays a part in a Hollywood movie.

* * *

WILLIAM L. SEITER, *Detroit News* photographer, has been named first prize winner in a nationwide competition for newspaper writers and photographers conducted by the Propeller Club of the United States. The competition covered maritime developments in the past year. Seiter's prize-winning picture shows a tug pulling a barge on the Clinton River. He will receive $250, a plaque, and a trip to New York.

* * *

GOOD news for members of the West Virginia News Photographers Association! Governor Clarence Meadows has affixed his signature to membership cards for the association which gives members proper credentials on assignment in areas where they are not known to local authorities. Governor Meadows is an honorary member of the association. Presi-

The MAGAZINES

By Robert Fuhring

Executive Secretary of the American Society of Magazine Photographers

ALL IN THE FAMILY. Under contract to shoot fashion pictures for *Charm,* HAL REIFF was allowed to do several special photos for *Mademoiselle* on the condition that they not appear over his real name.

Of all his work, it was, of course, one of these shots that was singled out by the Art Directors Club for its 26th annual exhibition at the Metropolitan Museum of Art. In the printed program, a strange new by-line made its appearance: Vishnevskaia-Hal Reiff. The first part of it is his mother's maiden name.

* * *

Hal, incidentally, did eight *Charm* covers in a row and appeared in the magazine's "Contributor's" column. His early exposure and development in his father's studio were sketched, but his first photographic chore was overlooked. This was hosing out the bear rug in the back yard after each baby "sitting."

* * *

DICK TUCKER, the ballet and night-life photographer from Boston, is appearing in the magazines with double exposure lately. That is, his pictures appear, and so does he. It all comes from knocking

TABLETOP PHOTOGRAPHY

Yvonne Halsman

The latest piece of indispensable camera equipment invented by a resourceful magazine photographer is the Halsman Kitchen Table for Ocean Photography. Philippe Halsman (see sturdy male bathing beauty in photo) has been promoting his invention among fellow members of the American Society of Magazine Photographers. His simple, utterly impractical gadget was invented on a bathing-suit assignment in Florida for *Life.* Philippe called for waves to splash the model, and they obediently splashed—on both the girl and camera.

"A kitchen table," commanded the master, with that instantaneous recognition of the exact thing required—which some writers tell us is the mark of genius. The table worked, as the photo shows. Holding down one end of it is a spare model. On the other end is a famous spare tire known as Dick Pope, a big figure in Florida publicity. Halsman recommends such tables to all photographers doing beach work. "Never go out without one—and the heavier it is, the better," he advises.

A COMPLETLY *NEW* LIGHTING IDEA

☆ ACME-LITEPAK No. 1 ☆

HERE'S a NEW indoor photo lighting development amateurs have needed for years . . a *complete* outfit, scientifically designed to give everything needed for correct lighting techniques, all in a single carry-all package . . *all at new low cost!* Now, you don't have to guess . . you don't have to take chances . . you save time and expense . . and, *you get better pictures.*

WHAT ACME-LITEPAK NO. 1 *IS:*

The new ACME-LITEPAK consists of a handsome, specially designed, durable container divided into several compartments. There is a separate section for each of the following items: (a) 2 clamp-on reflectors for No. 2 bulb, (b) 1 clamp-on reflector for No. 1 bulb, (c) 15 foot approved extension cord for 3-way service with switch, attachment plug, and 10 amp. switch-in-line, (d) compartment holding hand clamps and fittings, (e) spare compartment for several bulbs, (f) reinforced outer sleeve with grip handle . . you can carry LITEPAK like a suitcase.

WHAT ACME-LITEPAK NO. 1 *DOES:*

This new *PACKAGED LIGHTING* idea provides the exact number of scientifically shaped reflectors needed to produce better than average pictures. Enough light, correctly controlled, avoids under-exposure. And, to make sure that you get superior results we have included *4 tested lighting plans.* Simply position your lites as illustrated on the chart included in ACME-LITEPAK. You'll be surprised and delighted with the results. Then, when your pictures have been taken, simply pack each reflector and your accessories into the special compartments where they belong.

See ACME-LITEPAK No. 1 at your dealer's store. Write for book describing 30 New ACME-LITE Models including reflectors and stands . . the world's best lighting values.

The Things You Want...

Of course you want a home of your own—perhaps a new car—most certainly, happiness and security for your loved ones! Are you assured of these in your present job? If so, you are indeed fortunate. But, if you cannot see this happy future before you, decide right now to *study photography at home.*

Photographic training can give you *financial security* in work that you will enjoy doing. New York Institute Home Study Training will help you get the things you want. Our files hold hundreds of letters from N. Y. I. Home Study graduates who are now successful professional photographers. They no longer worry about punching time clocks in the morning or pink slips on payday. They are ambitious men and women who studied at home in their spare time while they held other jobs and continued their normal home life.

The New York Institute of Photography has a background of 37 years of photographic training for men and women who wish to get ahead. It is the oldest and most famous photographic school in the country. Our Home Study Courses are planned to make your advancement simple and rapid, even if you have had no previous experience. The teachers who work with you are outstanding photographers, and our Home Study students receive constant help and practical ideas for the improvement of their work.

Courses include Commercial, Advertising, News, Fashion, Industrial, Portrait, and Color Photography. Our pay-as-you-learn plan is easy on your budget, *and no expensive equipment is necessary.*

Remember, experience is the best teacher—our experience makes us *your best teacher.* Send the coupon *today* for full details.

NEW YORK INSTITUTE of PHOTOGRAPHY
10 WEST 33 STREET
NEW YORK 1, N. Y.

PHILIP GENDREAU

RESIDENT TRAINING

Our spacious studios and laboratories are devoted exclusively to resident photographic instruction under the guidance of highly-trained, *fulltime* expert instructors.

- Nine studios equipped with every up-to-the-minute facility for top-notch professional results.
- Retouching studio with a unique method of individual fluorescent illumination.
- Twelve airy printing and enlarging rooms containing the latest equipment.
- Glass enclosed, stainless steel chemical laboratory.
- Available under G. I. Bill of Rights. Write today for full details.

PIX-QUIZ

Here's another set of photographic puzzlers, helpfully complicated by Popko's inimitable illustrations. Pick up your pencil, sharpen your wits, and see how high a score you can make on this month's Pix Quiz. Remember to put a check in the box before the correct answer, and when you have completed the quiz, you can find the correct answers on page 150. If you can credit yourself with only one right answer—cheer up, for there's always next month. Two right is average, and three right is up at the head of the class.

I Could monomethyl paraminophenol sulfate be a bacteriologist's name for an ordinary house-fly? Perhaps, but a photo-lab expert would label it as

- ☐ 1. a type of photo-neuroses, described by the famous Freud as "hypo-inhibition."
- ☐ 2. Metol, a developing agent.
- ☐ 3. an alum solution used to harden photographic emulsions after processing.
- ☐ 4. a restrainer for choride emulsions.
- ☐ 5. an athletes-foot remedy.

submitted by R. W. Macri, Dallas, Texas

II Is "Actinic Ray" the nickname of Raymond Dzepleswicz, enthusiastic little camera collector, or is it

- ☐ 1. the radiation from a special sun lamp.
- ☐ 2. those portions of the electromagnetic spectrum affecting photographic emulsions.
- ☐ 3. radiations due to sun spot activity, visible only through Polaroid.
- ☐ 4. wavelength similar to infrared, used in a new rapid development process.
- ☐ 5. "Death-Ray" claimed to destroy everything but mice and men.

submitted by Frank H. Tooker, West Orange, N. J.

III No, "spotting" is not a way to check a change of course aboard an ocean liner, but photographers know it as

- ☐ 1. a process of removing lipstick from white shirts.
- ☐ 2. focusing a spotlight.
- ☐ 3. retouching small imperfections on a negative or on a print.
- ☐ 4. painting over a sound track at spliced scenes to prevent them from making a noise when passing over the sound drum.
- ☐ 5. using your hands to dodge parts of a print, while making an enlargement.

submitted by R. M. Johnston, Glendale, Calif.

Popular Photography's Traveling Salons

Popular Photography's Traveling Salons, which are made up of the prize-winning pictures entered in our picture contests, are available free of charge for exhibit at libraries, museums, department stores, banks, public utility offices, or any other organization or institution open to the public. If a Popular Photography Salon has not been exhibited in your city ask your local camera club officers, photographic dealer, librarian, department store manager, or banker to write Popular Photography Traveling Salon Dept., 185 N. Wabash Avenue, Chicago 1, Illinois, for information.

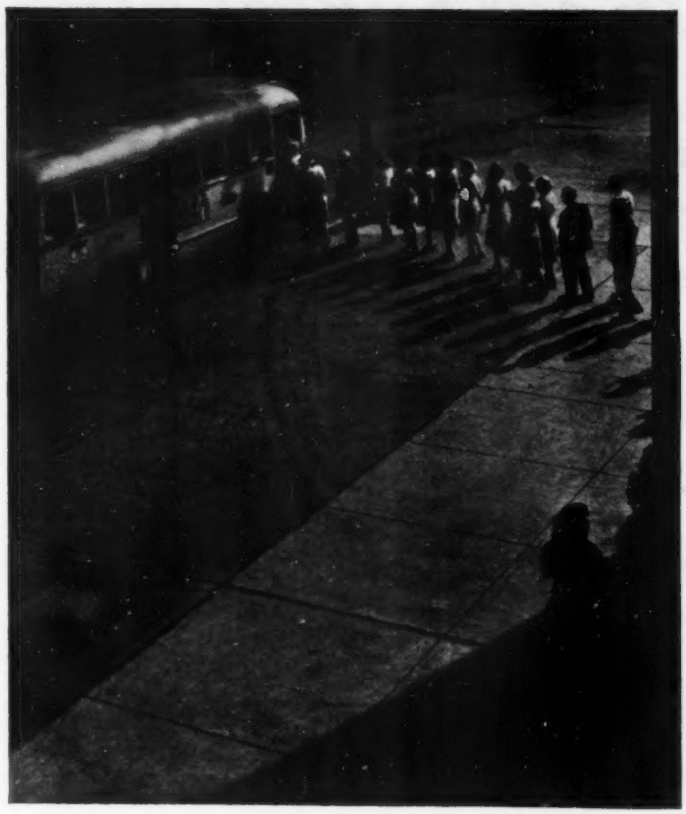
West Lafayette, Ind., Purdue Camera Club, October 1 to October 15.



5:15 by J. Elwood Armstrong, member Photographic Guild of Detroit—Winner in 3rd Annual Dassonville Print Competition. This print, which has been exhibited in 20 salons to date, is made on Charcoal Black B.

Leading photographers make good pictures better

Trail's end in photography is the paper your picture is printed on. Here is the market place where your work meets the critical eyes of the observer. On the expressive surfaces of Dassonville Charcoal Black and Charcoal Ember leading photographers are making good pictures better. This was dramatically demonstrated in the recent Dassonville International Print Competition where the world's top amateurs and professionals vied for high honors.

Charcoal Black, a fast bromide, provides strong blacks and pure whites. Charcoal Ember, a warm-toned chlorobromide, possesses wide latitude in exposure and development. Both papers in your darkroom afford an exquisite medium for achieving e-x-t-r-a qualities in moods and expressions. Ask for them at your favorite Dassonville dealer, or write for brochures.

CENTRAL CAMERA CO.
Photographic Headquarters Since 1899
CENTRAL CAMERA COMPANY CCC SINCE 1899
230 S. WABASH
CHICAGO 4
ILLINOIS

Faster! Speed counts when you photograph wild life; and you get your camera on your subject *faster* with the Markfinder. Guide lines appear to be projected on the image itself. Cross-hairs show the center of the subject. You correct your aim instinctively.

More! You see *more* with the Markfinder because the actual area covered in the finder is 25% greater than will appear on the film. By seeing more of your subject you frame your picture more expertly. Automatically you preselect the best composition.

Exactly! You see *exactly* with the Markfinder because you see eye to eye with the lens of your camera. The area that appears within the guide lines is the area that will appear in your picture, and the cross-hairs indicate the center of your actual exposure.

First and only Candid Camera with war-born "*Markfinder*"

* TRADEMARK

*Markfinder**

Now for the first time a 35 mm. camera is available equipped with a Markfinder showing you MORE field than your lens will take. Crosshairs at the center and guide lines at borders help you to preselect the composition of your actual picture. Now you can frame, compose and shoot your 35 mm. pictures FASTER and be sure of better results — thanks to Markfinder!

ONLY ARGUS HAS THE MARKFINDER

New argus 21 *makes Camera History*

Giving aerial gunners a means of pre-correction of aim saved countless lives in war. And now, developed from its war-time laboratory craftsmanship, Argus gives candid camera users pre-correction of their photographic shots. This new Argus 21 follows the lead of the Argoflex twin-lens camera, which shows you the picture before you take it.

And note these additional features of the new Model 21: Coated *f* 3.5 color-corrected lens... Accurate behind-the-lens shutter with speeds up to 1/200... Built-in synchro-flash with 5 and 20 milli-second adjustment... Exposure Counter... Double exposure guard... New streamlined styling... Saddle leather carrying case. See your favorite photographic dealer and ask him to show you the new Argus 21, the camera with the amazing Markfinder.

ARGUS, INCORPORATED, ANN ARBOR, MICH.

FEDCO MADE IN U.S.A. ·· FIRST IN THE DARKROOM

FEDCO DeLUXE SHEET FILM TANK

An outstanding new design of developing tank for all sheet film and film pack from 2¼ x 3¼ to 4 x 5, including centimeter sizes. Load in darkroom then process the film in white light. Takes 12 or less sheets without bending or creasing. Reel can be inserted in either position; locks positively for all sizes. Central pouring opening for rapid filling, with agitation rod and thermometer well. Pouring lips at either end for emptying. Metal loading fixture makes loading simple and rapid.

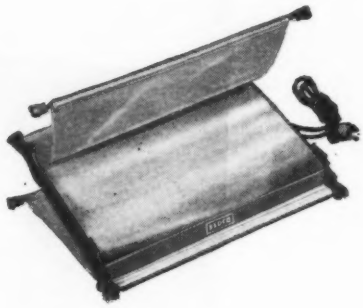
$7.95 Tax Included

FEDCO PRINT DRYERS

Polished aluminum drying surface for uniform heat distribution and even temperature on glossy or semi-matte prints. Accepts ferrotype tins. Specially designed heating unit assures quick drying with no danger of scorching. Heavy, washable, pre-tested canvas keeps prints flat, dissipates moisture. Canvas held under tension at all times. AC or DC.

Model 100—Single surface, size 11½ x 15 ..... **$ 7.75**
Model 200—Twin surface size, 11½ x 15 ..... **11.00**
Model 300—Super Twin surface, size 16½ x 20½ **21.95**

Tax Included in Above Prices



FEDCO ADJUSTABLE ROLL FILM TANK

Plastic tank with the familiar red top. Accommodates all popular sizes of roll film from 35mm to 116. Made of acid-resisting plastic with spiral feed reel and positive locking cover. Central pouring well accepts thermometer, agitation rod. Adjustable spiral feed reel only **$1.25.**

$3.10 Tax Included

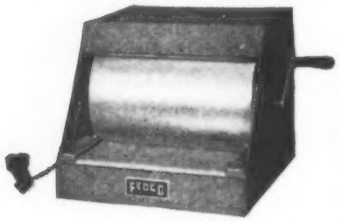
Fedco Sheet Film Tank . . . Takes sheet film and film pack up to 2¼ x 3¼. Holds 12 films in circular reel. Reel only **$2.00.**

$3.85 Tax Included

FEDCO FOCUS-RITE

A necessity for enlarging. See the image right-side up and in sharp focus. Slide it anywhere on the easel, focus a bright image instead of straining your eyes! When the negative is sharp in the Focus-Rite, it is sharp on the paper. Weighs only ounces yet provides a full two-inch image for focusing.

$2.75 Tax Included



FEDCO MOTOR-DRIVEN DRUM PRINT DRYER

A compact unit for the bench. Dries up to sixty 8 x 10 prints per hour. Prints up to 14 inches wide may be fed into the dryer, and any number of prints up to that total may be fed in at one time. Pre-shrunk canvas belt holds prints firmly against drum. Occupies space only 18" square, 15" high. Chrome surfaced drum takes glossy or matte prints. 110 volts AC or DC.

FEDCO MADE IN U.S.A. *Products*

37 MURRAY ST., NEW YORK, N.Y.

OMAG Filters—genuine solid optical glass—colored in the mass—precise, permanent, perfect.

Ordinary Filter — colored gelatin film-between-glass sandwich or indiscriminately tinted commercial glass.

It's Easy...with OMAG Filters

Use OMAG* Filters and watch your photography take on snap and sparkle with that "professional" look. Slipped over the lens of your camera before you shoot, an OMAG Filter captures the wide range of contrasts and all the detailed highlights and extra beauty of your pictures.

OMAG Filters are no ordinary filters. Heat, exposure and dampness can't affect them. They're made to last a lifetime! For black and white and color photography . . . for still and movie cameras . . . you can depend on OMAG Filters for perfect pictures . . . every time!

Look for Chess-United's OMAG Display Cabinet on your dealer's counter. It makes it easy for you to select the filters you need. For further information see your dealer—or write direct. Be sure to mention your camera and lens and dealer's name.

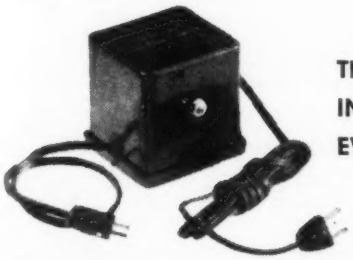
ECONOMICAL POSITIVE SPEEDLIGHT PHOTOGRAPHY *with* the **NEW** improved

Everflash I

MODERN... LOW COST... MORE LIGHT... PERFECT EXPOSURES

The New Improved Gun provides outlets for synchro shutter, for solenoid and focus spot.



THE CHARGER IS INCLUDED WITH EVERY UNIT

READ THESE EVERFLASH SPEEDLIGHT FEATURES

1. Portable — extremely light weight.
2. Low Cost Speed-light: over 10,000 flashes with each tube...a fraction of a cent per shot.
3. Operates from self-contained rechargeable storage battery—ready to Flash in a few seconds.
4. May be easily "Synched" to any and all types of shutters.* Just one adjustment on top of battery case provides the "Synch."
5. New Metal Gun has three outlets...for synchro-shutter, for solenoid operation and for focus spot.
6. Provision is made for remote control use when desired.
7. Everflash comes complete with new versatile flash gun, reflector, electronic flash tube, solenoid and synchro-shutter cords, leather carrying case and charger.
8. Everflash is ideal for serious photographers, news cameramen, studio work, home portraiture, industrial photography, night club flash work.
9. Guarantee . . . Perfected Engineering Design provides a liberal guarantee of performance, workmanship and material.

* *Except some focal plane types.*

Price of Everflash Complete $185, plus $12.50 Federal Excise Tax. For sale at leading Photographic Stores or write to

SENSATIONAL WAR BARGAINS in LENSES & PRISMS

ASSEMBLE YOUR OWN BINOCULARS!

NOTICE! If you buy both the Binocular Optics and the Binocular Metal Parts, your purchase becomes subject to 20% Federal Excise Tax Be sure to add amount covering tax to your remittance or your order cannot be filled.

Complete Optics! Complete Metal Parts!
Save More than ½ Regular Cost

GOVT'S. 7 x 50 BINOCULARS

Here's an unusual opportunity to secure a fine set of Binoculars at a substantial saving of money. Offered here are complete sets of Optics and Metal Parts for the 7x50 Binoculars. These components are new and all ready for assembly. We supply full instructions. Limit—1 set of Metal Parts and 1 set of Optics to a customer

METAL PARTS—Set includes all Metal Parts—completely finished—for assembly of 7x50 Binoculars. No machining required. Bodies have been factory hinged and covered. A sturdy Binocular Carrying Case is included with each set of Metal Parts.
Stock #841-P—7x50 Metal Parts.....**$36.20 Postpaid**

OPTICS—Set includes all Lenses and Prisms you need for assembling 7 x 50 Binoculars. These Optics are in excellent condition—perfect or near perfect—and have new low reflection coating.
Stock #5102-P—7 x 50 Optics.....**$25.00 Postpaid**

ARMY'S 6 x 30 BINOCULARS!

No Carrying Case with any Sets shown below. M-13A1 sets are waterproof model. M-3 sets are not waterproof. Limit—1 Set to a Customer on all Sets shown below.

COMPLETE OPTICS & METAL PARTS—Model M-13A1, 6 x 30 Binoculars. Everything you need—ready for assembly. When finished will look like a regular factory job costing $102 to $120. The Optics are new, in perfect or near-perfect condition. Have new low reflection coating. Metal Parts are new and perfect, all completely finished. No machining required. Bodies factory hinged and covered. Complete assembly instructions included.
Stock #830-P.....**$40.00 Postpaid, plus $8.00 tax—Total—$48.00**

COMPLETE OPTICS & METAL PARTS—Model M-3, 6 x 30 Binoculars. The Optics in this set are new, perfect or near-perfect. Prisms have new low reflection coating. Factory mounted Eye Piece and Objective Assemblies not coated. Metal Parts are perfect, new, ready for assembly. When finished, this will look like a regular factory job, except a name has been filed off a cover plate. No machining required. Bodies factory hinged and covered.
Stock #831-P.....**$35.00 Postpaid, plus $7.00 tax—Total—$42.00**

If you buy both the Binocular Optics and the Binocular Metal Parts, your purchase becomes subject to 20% Federal Excise Tax. Be sure to add amount covering tax to your remittance or your order cannot be filled.

METAL PARTS ONLY—Model M-13A1, 6 x 30 Binoculars. No Optics. Same Metal Parts as described for Stock #830-P.
Stock #832-P—6x30 Metal Parts **$25.00 Postpaid**

METAL PARTS ONLY — Model M-3, 6 x 30 Binoculars. No Optics. Some machining on these Metal Parts required. Bodies hinged and Prism Shelf holes placed, but you must tap them. Prism Shelves have been machined. Six lead spiral focusing threads have been cut. Some less difficult components you must thread and machine yourself, but all material you need is furnished except body covering material and Optics.
Stock #833-P.6x30 Metal Parts **$12.00 Postpaid**

OPTICS FOR 6x30 BINOCULARS (No Metal Parts). Perfect and low reflection coated.
Stock #5130-P.....**$15.00 Postpaid**

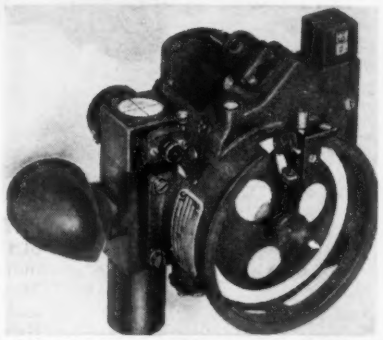
SAME OPTICS AS ABOVE Coated, but slight seconds.
Stock #5124-P.....**$12.75 Postpaid**

Optics and Metal Parts are Available for Monoculars (½ a Binocular). For Complete Details, Write for Bulletin #14-P.

YOU CAN EASILY MAKE

Telescopes, Magnifiers, Photographic Gadgets and Hundreds of Experiments with these Low Cost Lenses.
To Translate Millimeter measurements: 25.4 mm. equals one inch.

NEVER HAS THERE BEEN SUCH A
SENSATIONAL BARGAIN
AS THIS!
BUBBLE SEXTANT
TYPE A-10



Used by the Army Air Forces, these Bubble Sextants cost the Govt. about $200 each to make. At our price of $12.50, you can quickly see that this is a wonderful bargain. Included with your Bubble Sextant shipment will be a sturdy wooden Carrying Case, equipped with catches and handle, 5 spare waxed paper discs, flashlight with rheostat for using Sextant at night, (uses ordinary flashlight cells which are not furnished), auxiliary 2 power Galilean Telescope for use on faint stars, Allen wrench, 1 spare marking point. Though wartime used, these Sextants have been, where necessary, completely repaired, collimated, and put in good working order. The light bulb has been tested. The Bubble is in working condition. All other working parts have been checked and are in good order. Because these Sextants have been wartime used, we make the following guarantee: if you are not satisfied that our Sextant is exactly as we represent it, return it within 10 days and your money will be refunded. Full directions on how to use the Bubble Sextant will accompany your shipment.
Stock #924-P.....**$12.50 Postpaid**

SCHMIDT OPTICAL SYSTEM. Black plastic body, size 3 15/16" by 5½". F.L. 2.4" . . . with amazing speed of F 0.9. Used in Navy's Infra-Red Sniperscope and Signalling Units. Govt. cost $134. Limit—1 to a customer.
Stock No. 720-P.....**$6.00 Postpaid**

MOUNTED KELLNER TELESCOPE EYE PIECE—Perfect, coated, in Ordnance sealed boxes. F.L. 1¾ inches. Outside dia. of steel mount 40 mm.
Stock #6198-P.....**$3.15 Postpaid**

AIR FORCES GUN SIGHT

With Polarizing Variable Density Attachment—Can be used as Slide Viewer, or take it apart and you can get Polarizing Variable Density Attachment, Mangin Concave Mirror, Reflector Plate, Metal Reticle, Window, Lamp Housing, Ring and Bead Sight. The Polarizing attachment alone is worth many times the price of entire unit. Consists of 2 Polarizing Filters mounted with small handle which rotates one around the other. May be used in Photography, Research, Experiments, as Light Dimmer, etc.
Stock #908-P.....**$5.00 Postpaid**
Same Unit Without Polarizing Attachment
Stock #916-P.....**$2.50 Postpaid**

GIANT SIZE RED AND AMBER FILTERS

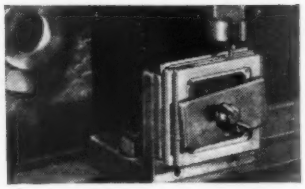
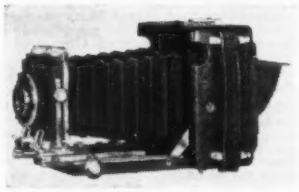
EDMUND SALVAGE COMPANY • P. O. AUDUBON, NEW JERSEY

only BUSCH gives you these outstanding features in performance and construction . . .

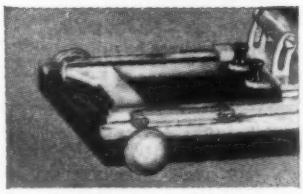
Professional and amateur photographers hail the Busch Precision Pressman as the first really new press camera in many years. This overwhelming acceptance is based on new, improved features in performance and design available *only* in the Busch Precision Pressman.



PRECISION-MACHINED CASTINGS . . . NOT STAMPINGS. 96% of the metal parts of the Busch Pressman are cast of light, durable metal and then precision machined to fit to micrometric accuracy. Metal that accepts stamping is soft enough to gradually lose shape and fit. Wherever possible, stampings have been avoided in the Busch Precision Pressman. This construction feature assures perfect picture-taking for years under the most arduous conditions.



EXTRA-LONG BELLOWS EXTENSION . . . The bellows of the Busch Precision Pressman can be extended farther than any other press camera of similar film size. Extra-long bellows extension permits close-up work without changing lens or adding supplementary lenses. With the bellows fully extended, the camera can be brought as close as six inches from the subject while still retaining sharp focus on the ground glass. Another feature found only in the Busch Pressman!



EXTRA-WIDE LENS STANDARD BASE . . . The Busch Precision Pressman is built with the widest lens standard base of any other similar size press camera on the market. When the lens assembly is pulled forward onto the focusing rack and released, the lens automatically locks parallel to the focal plane of the film. This exclusive Busch construction feature means faster, more accurate picture taking for you every time!

BUSCH
Model C
2¼ x 3¼

Retail Price
$73.40
Including Federal Tax
Less Lens and Accessories

AND ONLY BUSCH GIVES YOU a locking knob that holds the focusing rack immovably at any position . . . heavy high impact plastic construction on the focusing panel that eliminates warpage and reduces wear . . . new lateral adjustment and tilting controls for greater range of distortion control . . . and a host of other exclusive developments in performance and construction PLUS all the time-tested features of press cameras. See the Busch Pressman at better dealers in the United States and Canada.

THERE IS A *Mendelsohn* SPEEDGUN*

TO FIT *Your* CAMERA!

Here are some of the photo flash refinements which have made the MENDELSOHN SPEEDGUN the *first choice* of exacting news photographers and discriminating amateurs alike:

- ✓ The simple action of cocking the SPEEDGUN cocks both the SPEEDGUN and the single-action shutter simultaneously.
- ✓ Switch button guard, positive-grip sockets, and safety catch save bulbs and batteries.
- ✓ Lightweight, streamlined, satin-finish, Dural construction, chrome fittings.
- ✓ Double-duty, aplanatic Twinflectors for *both* standard and midget bulbs.
- ✓ Silver plated contacts and *automatic* bulb ejectors for both sockets.

Model E SPEEDGUN for Argoflex, Ciroflex and other cameras with Alphax and similar, single-action shutters.

FREE CHECK CHART

The new MENDELSOHN SPEEDGUN Check Chart is just off the press. Now, you can determine the proper SPEEDGUN and adapting parts for your cameras simply by locating the name of the camera and/or shutter on the chart. Write for your free copy (MS-16) today!

Weston *Photographic Analyzer!*

- **DENSITOMETER**
- **ILLUMINATION METER**
- **PRINTING EXPOSURE GUIDE**

Designed to provide darkroom workers with the means to produce better prints... both black-and-white and color. Puts every step of darkroom procedure under the same flexible, scientific control that the Master II does to film exposure. Analyzes every operation in terms of your own equipment and practise. Essential to the control of each step in color work. Order through your local photographic dealer. WESTON Electrical Instrument Corporation, 644 Frelinghuysen Avenue, Newark 5, New Jersey.

USE IT FOR...

Measuring negative density and contrast range.

Measuring enlarger and contact printer illumination.

Measuring contrast ranges of printing papers in terms of your own equipment and technique.

Selecting correct paper range for each negative.

Determining precise exposure times in contact printing and enlarging.

Checking accuracy of filter factors.

Determining "hold-back" and "burning-in" times in dodging.

Constructing time-gamma curves.

Balancing color-separation negatives.

Making compensating transparency masks.

Controlling the various steps in Printon, Carbro, Color Separation, and other color processes.

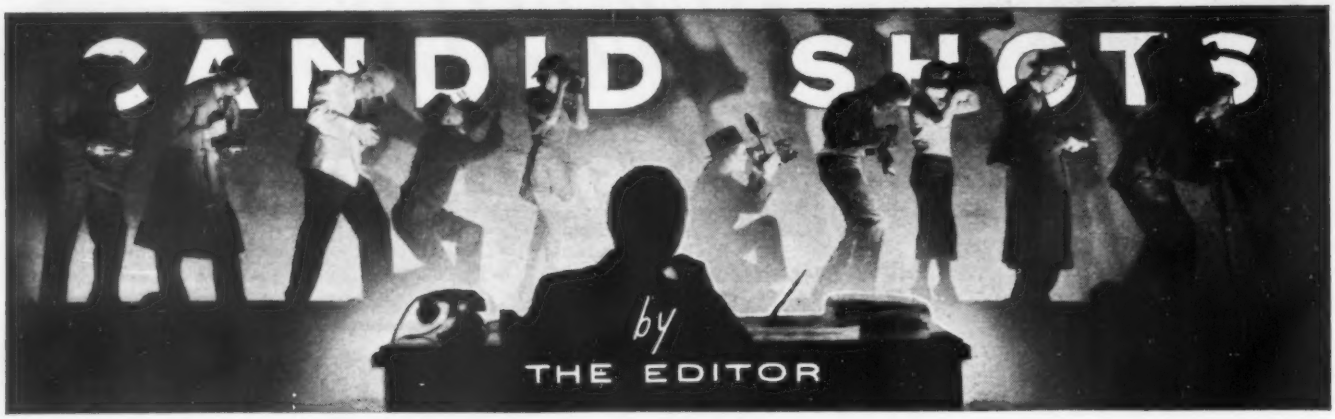
Minifilm CAMERA EXCHANGE

1190 AVENUE OF AMERICAS • NEW YORK CITY, N.Y.

DETROIT PUBLIC LIBRARY



IN LINE with other informal discussions on amateur photography that recently have appeared in this column, we would like to add a few words on the subject of making good pictures.

Amateurs who advance to a point in their picture taking where they feel the urge to join a camera club soon become aware of the group's interest in pictorial work, salon exhibitions, print competitions, and print criticism sessions. Most clubs devote an evening a month to the latter, wherein one or more of the older and more experienced members, or guest critics, discuss the merits and faults of members' prints. This club service has been one of the most helpful aids to the serious worker, and has been instrumental in the technical and artistic advancement of many who today are prolific salon exhibitors.

In fact, so valuable is this guidance to the amateur that the idea has been expanded by the Photographic Society of America through the inauguration of a number of traveling portfolios (39) which circulate among members (945), many of whom live in towns and cities that have no organized camera groups. Participants get comments on their prints from others in their portfolio circuit, plus an evaluation from a seasoned critic.

ALL THIS brings to mind the fact that, while many have the ambition to become successful pictorialists and makers of prints worthy of public exhibition, there are countless camera fans who, because of the press of other interests and duties or lacking the need of an outlet for artistic expression, confine their picture taking to the documentation of home and family, vacation trips, and the like—the type of pictures ordinarily referred to as snapshots. But among this group of hobbyists there are many who have joined clubs as a means of improving their work and for the added fun offered by associations with a group.

While the average camera club of some years ago was composed largely of members whose primary interest was pictorial and exhibition photography, today's rosters represent a wider range of interests in the field—color, movies, documentary, technical. Accordingly many organizations are broadening their viewpoints and inaugurating activities that will appeal to all interests.

We once had a disgruntled club member tell us that every time he brought what he thought was a good snapshot of his youngster to the meeting for evaluation, the old-timers immediately judged it according to standards applied to exhibition prints, and generally ruled it "out." This suggests the idea of having clubs institute a criticism service for pictures not made for shows but solely for the enjoyment of the maker and his intimate friends. Undoubtedly this already is being done by many photographic groups.

SPEAKING of making better pictures, the first article in this issue, "Portrait of A Youngster," by Gordon Lord, gives some helpful tips on photographing children and suggests simple ways to make striking portraits of young subjects.

Also included in this issue is a story on composition by Val Samuelson (page 52), in which the author shows how easy it is to make better pictures by following a simple rule in arranging subject matter before the camera with the aid of the viewfinder. Another article planned especially for readers of POPULAR PHOTOGRAPHY tells how to use flash for filling in shadows when making outdoor pictures in daylight (page 56), with the text and illustrations by Rus Arnold.

WITHIN a few days the first issue of our new companion publication, *Photography*, will make its appearance. Aimed to reach all photographers whose interests go beyond those satisfied by existing camera magazines, it will stress subject material of wide interest, of the kind that will be helpful, informative, challenging, and inspiring to advanced amateurs and professionals alike. All phases of photography will be discussed, theoretical, technical, aesthetic, and historical, and finest reproduction and presentation will be maintained. Although *Photography* has been planned for the camera owner who desires to practice the craft on a broader scale than the occasional picture taker, it recognizes the importance of the casual snapshot and its maker. To him we extend an invitation to explore the pages of this new magazine, with the thought that here he may find the inspiration that will awaken a desire to make more and better pictures, and through a fuller understanding of the photographic technique find greater enjoyment from this fascinating hobby.

THERE'S AN ILEX SHUTTER AND LENS TO MEET YOUR PHOTOGRAPHIC NEEDS

Photographers today demand high standards of performance from their equipment . . . dependable shutter speeds, accurate exposure timing (especially for color), perfect synchronization, smooth, convenient operation, critical definition in lenses. Constant research and 36 years' experience assure dependable performance from the wide variety of Ilex Shutters and Lenses designed for your most exacting photographic requirements. Illustrated above is a variety of Ilex Precision Shutters and Lenses including the famous Ilex Acme Synchronized Shutters, Acme Shutters, Universal Shutters, and Paragon Lenses. Ilex Paragon Lenses (for taking, enlarging and projecting) are coated or uncoated as desired. For dependable performance in Shutters and Lenses, "Look to Ilex." Due to increased production, many Ilex products are now available. Ask your dealer about Ilex Precision optical equipment.

KALART

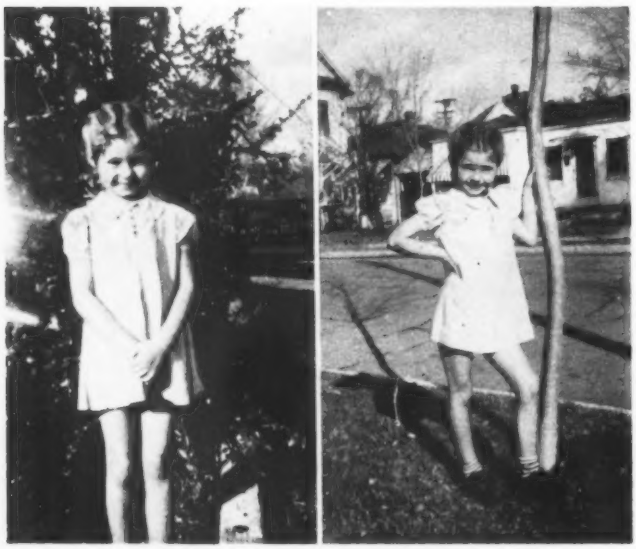
Copr. 1947, The Kalart Company, Inc., Stamford, Conn.

Nearly everyone has an old, worn fence somewhere in his neighborhood. Use it, and make it as effective a frame as this.

A bale of straw, a cloud-streaked sky, and the sun as a side light. You need only a few essentials for your child's picture.

PORTRAIT OF

Is this the way to capture the carefree spirit of a child?



Thousands of pictures like these pass across the counters of corner drug stores and photofinishers every year. Uncounted numbers of amateur photographers make them, and mount them in their albums where they remain, mute testimony to their makers' lack of imagination. You don't have to be guilty of this, for your pictures can be as good as Gordon Lord's, instead of like those above. Would you believe they are all the same child? And that the change was made, not by any magic of makeup or of camera, but by following a few simple rules?

Photographs and text

By GORDON LORD

CHILDREN are not only fun to photograph, but they *have* fun being photographed, provided you go at it in the right way and have enough patience and consideration for them as models. Having no children of my own, I have to borrow mine. You, who don't have to borrow yours, are lucky indeed. For if they aren't your own children, they must realize that you like children, themselves especially, if you are ever to succeed in getting their full cooperation, something you must have to get good child pictures.

Take them just as they are—don't slick down their hair or scrub their faces—for complete naturalness is the thing in child photography. But take pains with them, for although clothes do not make the child, the proper ones certainly help the photographer a lot. I like stripes, on little girls especially, to go with the plain backgrounds and props I use and you may, too. Modern, striped "T" shirts do very well on either boys or girls. If not stripes, plain colors are best. All white on girls is beautiful against a blue sky, either in color photography, or black and white. Any "smooth" color that will show sufficient contrast with your subject's skin and your background, will do however.

"Get out from under." By that I mean, get out from under trees, wires, bushes, buildings, any shadow-producing objects, or distracting items that might clutter up your otherwise plain background. Get out in the open sunlight, and make use of that sun too, because it is as natural as your little model, if given half a chance.

Get out of town, if necessary, to clear up that background completely. Pick your spot carefully so that you can shoot your picture with your camera as nearly level as possible and yet have a maximum of blue sky around your subject. Have

A playground is your scene, a swing is your prop. Everybody can do as well, too.

It doesn't take a reflector or fill-in flash to make a picture like this. Will you try it?

A low angle and relaxed subject combine to make a superb portrait.

A YOUNGSTER

Sunlight and a blue sky background are all the setting you need to capture the real personality of a child on film

an afternoon location and a morning location, where that "blue sky" background is always available and where you can shoot with the sun *behind* your camera and on your model at about forty-five degrees.

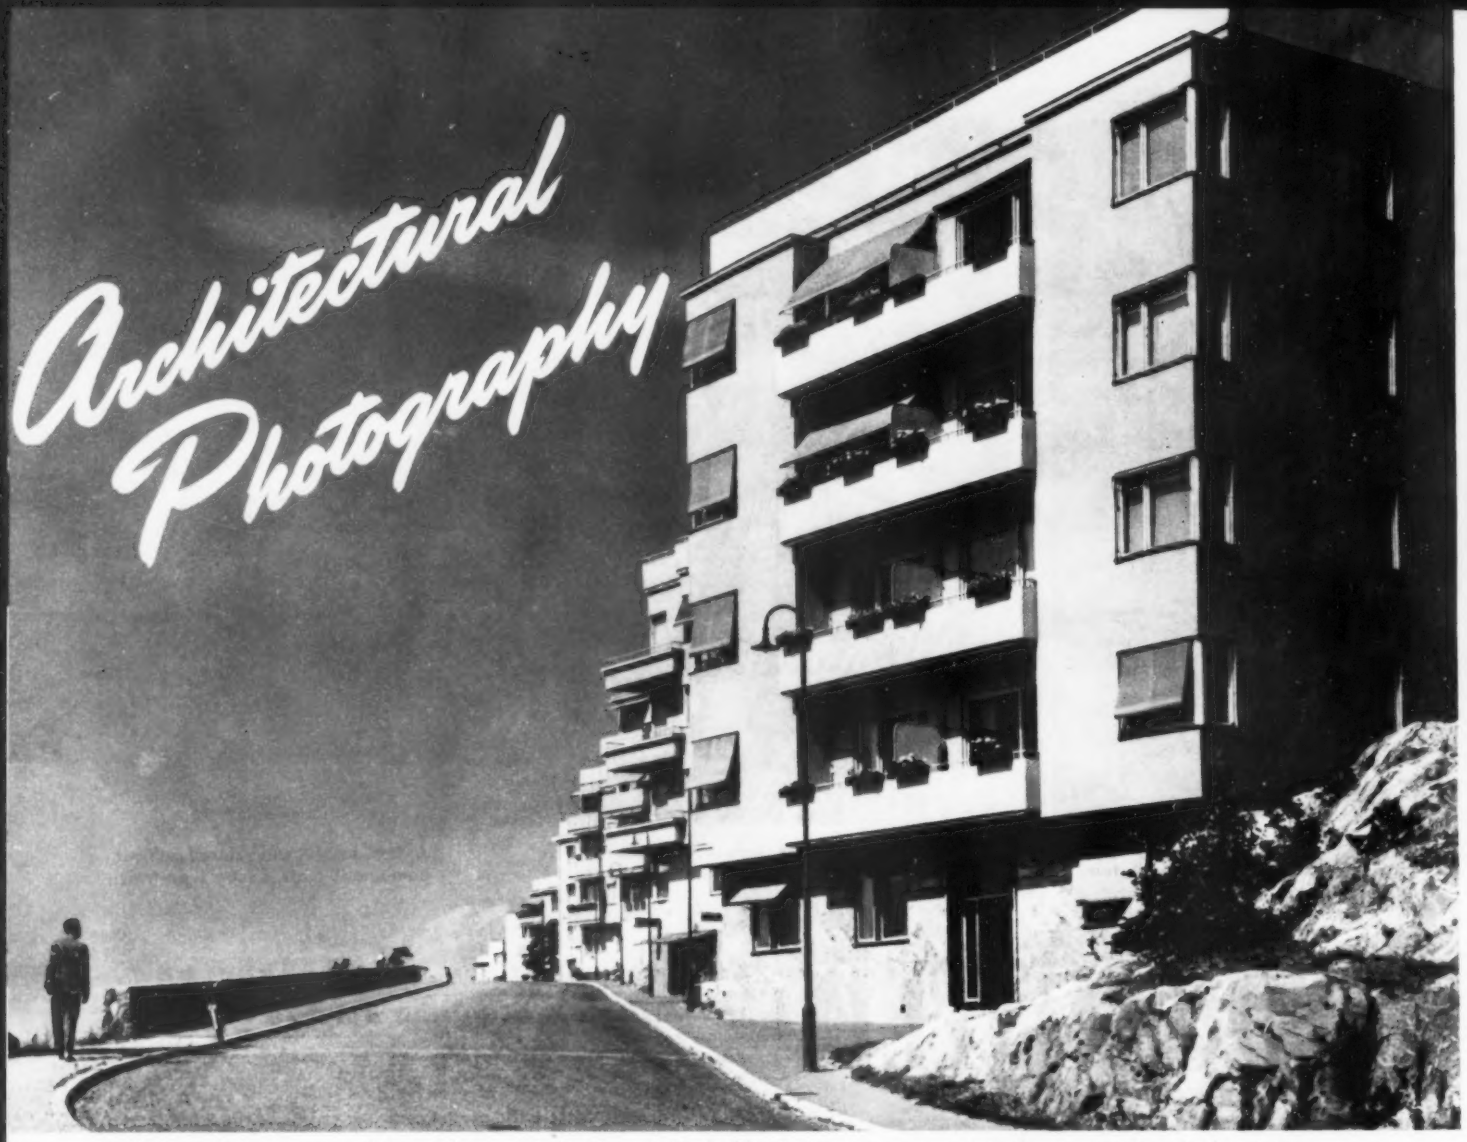
The reason for the afternoon and morning locations is that your model may not always be available at one or the other times, and mid-morning and mid-afternoon lighting are the best, I've found. Getting your child model in a receptive and agreeable mood is half the battle won. Make these little trips out to the edge of town "a looked-forward-to adventure" each time, and then both you and your little model will enjoy the whole proceedings.

Natural children need natural lighting and "Old Sol" himself is the most natural light source there is. I used no artificial lights or reflectors of any sort on Carole in these pictures you see reproduced here. No lights, one simple "prop" (the one she is "on"), are the only requirements you will need for a good outdoor "kid" picture, together with your camera, light meter, medium yellow filter, and your model dressed as simply as possible, and posed as naturally as possible against a clear, blue sky background. A tripod is advisable, unless you are shooting fast with a fast lens and a fast film in your camera. Sometimes you may find it difficult to "follow" children to the proper position with a tripod, but otherwise it is always best to use one. Use a long cable release, and when you and your model are all set, forget the camera and concentrate on your subject.

Keep your subject and "lone prop" as nearly in the same plane as possible and shoot with the camera nearly level (perhaps slightly lower than the subject, if necessary, to achieve that "completely blue sky" background). That blue sky, unhampered by wires and poles is the single thing most essential to the success of your child photo- (*Continued on page* **86**)

You may want to have the child doing something, so bring big brother into the picture too. But remember props, blue sky.

Architectural Photography



Include a figure in your photograph as an indication of the building's size, but weave it into the composition. In this picture of the Fredhall apartments in Stockholm, the man at left is an integral part of the composition; cover him and the balance is lost.

Look for the beauty in buildings when you travel, for stone and steel are as worthy of your camera as any subject you can find

By G. E. KIDDER SMITH

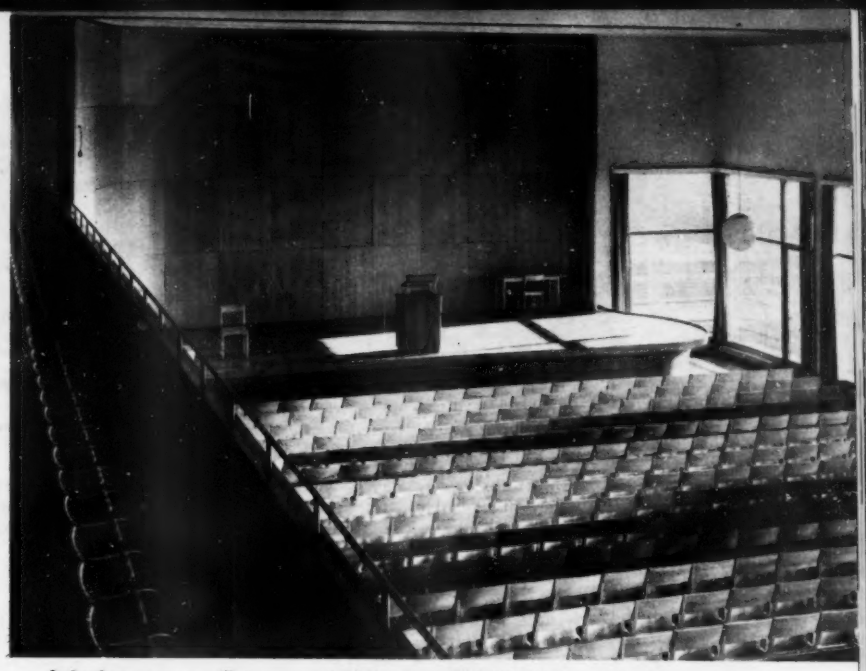
ARCHITECTURAL photography can be a highly technical and costly undertaking and many competent men make it their life work. I have found that it also can be a relatively inexpensive and delightful hobby.

Having a natural interest in photography myself and several unusual opportunities in the past half dozen years to develop it, I have picked up by much trial and considerable error several points of procedure which have proved useful. A professional undoubtedly would disagree with many of them, and of course each has exceptions, but in the main I believe they might be helpful. As a foreword it might be said that most of them revolve about expressing a brilliant play of light and shade, for to me this is the

←

Another use of figures is in weighting the foreground, and to give appearance of depth to the photograph. The Old City, in Stockholm.

You may prefer to get away from, and encompass the whole of your subject. Ouro Preto, Brazil.



Interior scenes will try your technique and ability, but a surprising amount can be done by natural daylight alone. Hedquist Auditorium, Stockholm.

G. E. Kidder Smith (whose last name is Smith, and not Kidder-Smith) is primarily an architect, but is famous throughout the world for his photographic activities which have been accomplished as an adjunct to his architectural researches.

For nearly all of his photographs he has used a 9x12 cm Zeiss Juwel equipped with either a 15 cm Tessar, a 21 cm Double Protar, or one of several wide-angle Dagor lenses. A medium yellow filter is most often used, although Smith may occasionally use a red filter as he did in Greece and Egypt.

essence of architectural photography.

When a professional photographer takes our studio portrait, we have probably noticed that he carefully arranges his lights to bring out what he feels will be the most revealing illumination. Yet in taking architectural pictures we seem to forget that a great deal of control or modeling of light and shade can be achieved by merely pulling up a chair, pouring a cool drink, and waiting for the earth to revolve a few degrees. For throughout the entire day the sun plays on our buildings—expressing ever different effects, emphasizing certain features we wish emphasized—or vice versa, and bringing out by quantity and angle of sun the three-dimensionality and rhythm of the design. Most of us forget

Approach a group of buildings with the idea of relating them to each other in a special composition. Two Grecian temples near Athens.

In architectural photography, a city may be your stage, and elements themselves your theatrical effects. Here a hole in a passing cloud serves to spotlight the subject. Ouro Preto, Brazil.

Patience is the only prerequisite for obtaining the effect of light and shade you wish, for through the day the sun plays on a building, ever expressing different effects. Aalto's Sunila Pulp Mill, Finland.

this when we set forth to photograph a building which attracts our interest, and snap with no further consideration or mental struggle as to what the light might be two hours earlier or later in the day.

What then should be our approach; how had we best begin to photograph buildings? Start with a bright, sunny day, with preferably a few clouds of the harmless variety thrown in to break up sky areas. Then make a rough sketch of the building and stroll leisurely around the entire project, forward and backward, noting the angle of the sun and estimating what time it will be most significant on the sides or sections you wish to photograph. This can be done almost any time of day and it forces you to imagine light conditions at other times, hence making you far more conscious of light when you finally do shoot.

I make small arrows on my sketches with 9-10, noon-2, 4:30-5:00, and so forth, indicating by them that the sun is good at that time or that I expect it to be. By a "good" sun is meant one—and this is immensely important—which is strong on one point of interest, generally the main one, and *not* on an adjoining one;

Buildings with a lagoon nearby which can serve as a reflecting pool may be found in your community. They can provide you with practice in every type of architectural photography described in this article, as can other buildings you know. Picture is of new housing, Sweden.

When confronted with a foreground that will detract from the picture, wait until the sun shades it, highlights the subject.

in other words, with the sun from the side or even slightly in front, but not directly behind.

Select only the most expressive and revealing illumination; make the building play with light and shade; make the chiaroscuro sing.

Composition must be felt, but lighting can be analyzed, and there is no excuse for bad examples. Note when eaves cast interesting wall patterns, when trees project shadows in the early morning or late afternoon, when the foreground will be in shade and the main subject highlighted, when a hole in a passing cloud mass spotlights the subject, when contrasts sparkle. This can be done and is not difficult, yet we foolishly seem to be always in too much of a hurry. When equipped with a suitably marked plan and a fairly firm idea of light possibilities at various times of the day, come back and shoot those sections on which the sun at that time is most flattering.

Having chosen the lighting we must interpret the atmosphere and character of the subject. Beware, however, of snapping without thinking, for if we concentrate on getting a good picture and put the amount of subject shown secondary, we will in most cases get what we want in the building; but if our conscious end is directed only toward a picture of the building and the camera is merely a means to record that end, we will get no more than this record. Have the quality of the picture paramount in mind and the building will take care of itself.

We will first want to show the subject as a whole, and the initial reaction is simply to move back far enough so that the lens subtends the structure from end to end. However, this will seldom produce a good picture and almost never a complete impression, for we have included only the building and little of what goes on around it. It is, therefore, generally wise to get off sufficiently to relate building to landscape, and tie it to surrounding trees, rocks, water, or other structures. If the building hangs over a lake, by all means include it; if near a

(*Continued on page* **140**)

You may prefer to enlarge a segment of your photograph, and use that piece as a separate composition in rhythm and line. These are the buttresses of Chartres Cathedral in France.

By comparing infrared picture (above) with photograph of the same scene taken on panchromatic film (below) you can spot the most important characteristics of this interesting type of photography. Foliage in the foreground appears lighter than normal, while water and sky are darkened. Trees on the horizon are sharper, for infrared cuts through some types of haze. Merely loading with infrared film is not enough to obtain the effect—a red filter is needed to cut out blue light.

NEWER

By

DR. WALTER CLARK

FPSA, FRPS

Kodak Research Laboratories

PHOTOGRAPHY by invisible rays has appealed to the imagination of large numbers of photographers since about 1930, when new types of infrared materials were made available. They put into the hands of the photographer a medium which previously had been used mainly by scientists for special studies. In recent years there has been much more progress, and infrared photographs can now be made with the ease of ordinary pictures, and with the same apparatus. This means that large numbers of photographers have tried their hands at it. The aura of mystery is dispelled, and the sort of magic attributed to it earlier has been reduced to reason. Some photographers, brought up in the traditional school of photographic quality, naturally have not readily accepted the unusual tone values of infrared pictures, and for most purposes there is little reason why they should. The photographs do, neverthless, provide many striking pictorial effects, and they can be extremely useful in many utilitarian fields.

Although much has been written of infrared in the popular photographic magazines as well as in the more technical publications, it is perhaps time to talk about it again, for there has been quite a lot of progress recently. For example, some infrared films of today are as fast as the fastest panchromatic films of fifteen years ago, and the ice-box is no longer obligatory as a storage cabinet, for they keep just as well as fast panchromatic materials. We know, too, more about the way in which different kinds of things photograph in the infrared, more about the infrared focus of lenses, and so on. Many new uses for infrared photography have come to the fore, partly as a result of the impetus provided by the war, and partly as the result of experience which has come with the years.

In 1931, one of the most striking of the earlier infrared pictures was made. It was of a group of people in an auditorium, photographed in complete darkness. The exposure was one second at *f* 3.5, and the infrared was provided by fifteen thousand watts of tungsten filament studio lamps in a booth covered with the Wratten No. 87 filter to eliminate visible light. Recently, the same sort of photograph was made in the same auditorium at *f* 3.5—but in one ten thousandth part of a second, using three Kodatron lamps in the booth. In fact, large numbers of such photographs have been made, and one of them is shown in an illustration accompanying this article.

The public imagination is captivated by

INFRARED

Anyone with a camera now can take pictures by "invisible light." Here are new advances in this fascinating field

Camouflage detection was a dramatic use of infrared during the war. Painted panels 1 and 2 above match each other and the grass fairly well—as shown in the photo on panchromatic film (left). Panel 1 is poor for camouflage, as it appears black by infrared (right).

the thought of enemy camouflage and means for detecting it, and in the press, mention of infrared often is associated with some reference to its being the thing used for camouflage detection. Many persons have been trying to make camouflage undetectable by infrared, in the same way that they make it invisible to the eye or to the ordinary photograph. This could be done if camouflage paints reflected the infrared in exactly the same way as the materials they were supposed to imitate. Of course, other factors such as the form and dazzle effects come into play, but if, say, imitation leaves photograph black by infrared whereas natural leaves appear light, the imitation foliage will be readily detected.

Many green paints which may look the color of leaves of grass, photograph by infrared as though they were black, and so will stand out clearly against the natural leaves and grass which have their characteristic whitish appearance by infrared. In one of the illustrations accompanying this article this effect is clearly shown by green painted panels lying on grass among trees. One of the panels carries a green paint which absorbs the infrared while the other panel is coated with a paint that reflects it. To the eye and on panchromatic film they are a reasonable match for the surroundings (they would be better if their shape were broken up), but by infrared the best one remains light like the grass while the other, poor camouflage paint, appears black against it. Studies of quite a lot of paints from this point of view have been published, and specifications for some paints for the Services call for a test to be made to ensure that they have a high reflectivity when photographed by infrared.

Perhaps before we go any further, we

(*Continued on page* 145)

Recovery of information on charred documents sometimes is possible by infrared photography. The film records more than the eye can see.

Audience reaction studies, like the one from which this photo by Ralph Crane was taken, can be made without the knowledge of the subjects by using infrared film and "blackout" flashbulbs which are coated to absorb their visible light.

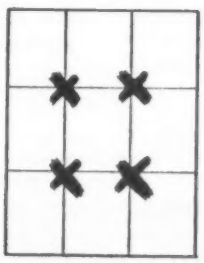
Against the sun, shots are dramatic and striking, although their strong contrasts make the exposure difficult to determine.

Joshua tree in foreground dominates the center of interest, and the smaller trees give an illusion of great depth, distance.

Deer demands attention be ause of its contrasting background. Picture was made from two negatives taken 500 miles apart.

Composing *through the viewfinder*

Photographs and text
By VAL SAMUELSON



Here is a simple technique that will solve your problems in composition, and help you to make better pictures

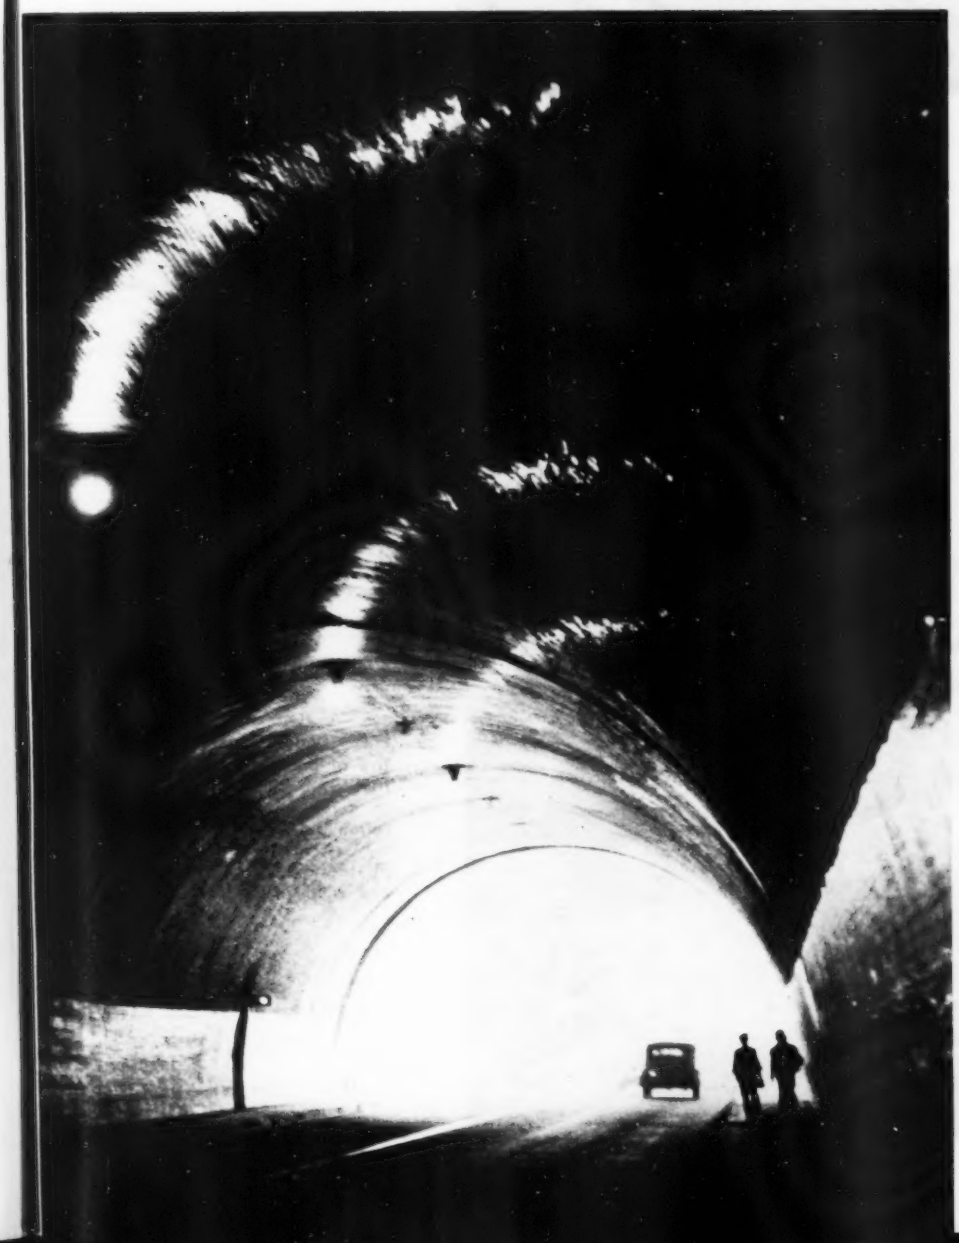
No matter what your stage in photography, these suggestions, if followed, will automatically provide you with better pictures. The principles are simple—when composing through your viewfinder, mentally divide the area of your negative into thirds, both vertically and horizontally, as is done in the sketch above. Then, when you are ready to take a picture, plan and arrange your composition so that the center of interest cuts through an intersection of these lines. You will know what the center of interest is, for it is usually the dominating or striking feature of the picture, and probably is the reason why you want a picture of that particular scene. Remember that subject matter should always be arranged facing into the photograph, and compose your pictures for the full negative area, not just for a portion of it. If you will study prize-winning pictures, and those which have been hung in salons, you will notice how often this basic rule applies. This formula is so simple that anyone can grasp it, and work will improve immediately after applying these principles. After using this compositional procedure for a short time, one develops a "feel" for good composition on any subject. Now load your camera, remember these principles, and retake that shot that missed because of poor composition.

Two figures and the car standing against the light at the mouth of the tunnel give the composition interest. Repetition of lights creates an odd pattern.

The tiny figure in this picture creates interest, and reveals the relative size of the waterfall and the rock formation.

Horizon line cuts across one third of upper picture area—a good division for composition. Notice depth, perspective.

A sturdy tripod is necessary for night shots. This picture ideally demonstrates the composition principle of this article.



TIPS FOR BETTER PICTURES

1 Mentally compose and shoot pictures, wherever you might be. Develop the habit of "seeing" what is a good composition.

2 Search for variety in commonplace subjects, for no matter how dull a scene appears, there is always a fresh viewpoint.

3 Strive for harmonious settings which help you to convey unity and simplicity. Keep your picture clear of distractions.

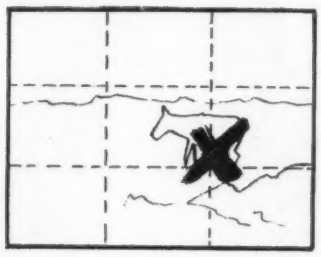
4 Think with clarity—shoot with sincerity of purpose, and by all means stick to only one subject for each of your pictures.

5 Composition must be kept as simple as possible; remember to keep unnecessary elements from crowding into photographs.

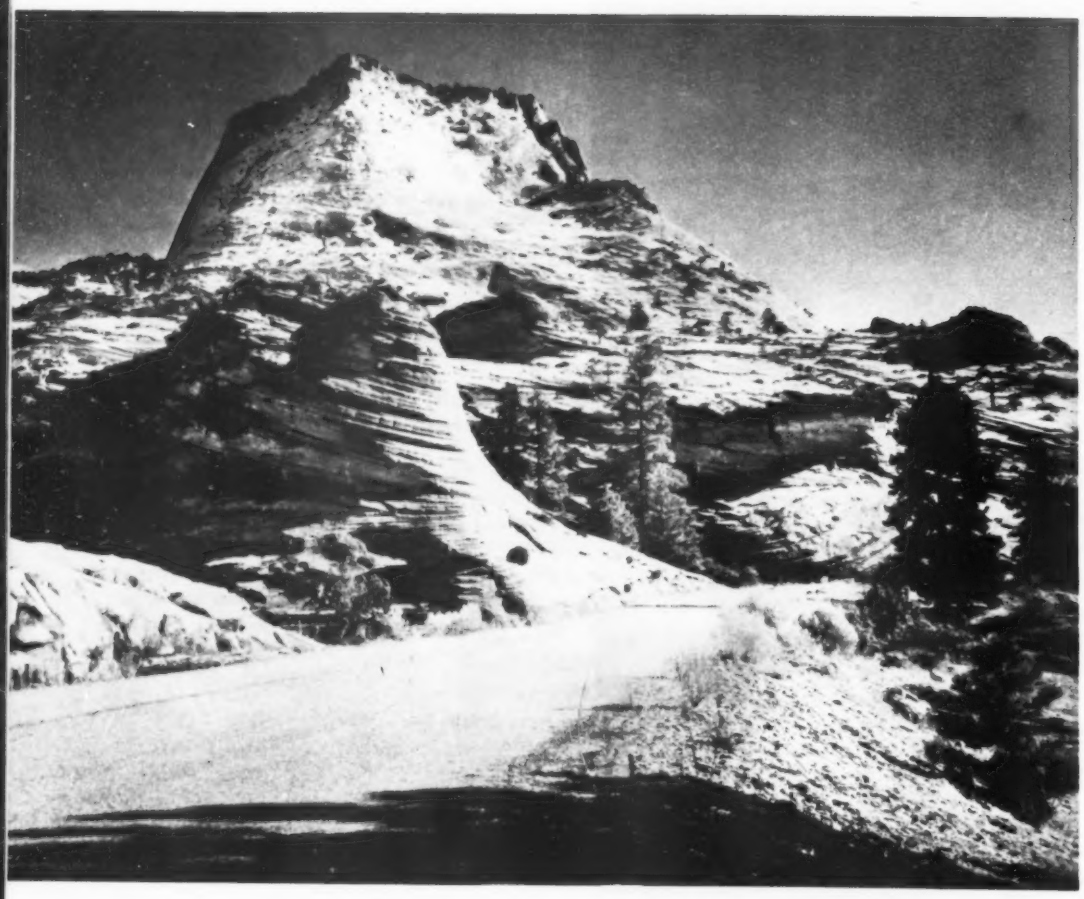
6 Avoid the certain types of factual subject matter which can be construed as record photography, or as a mere snapshot.

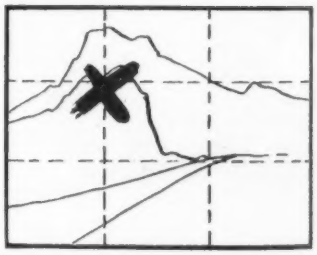
7 Plan the "play of light" with emphasis on the center of interest, subdue elements that contribute little to picture's theme.

CONTINUED →

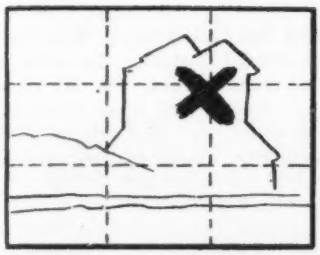


This desert picture required considerable dodging and burning in of tones to make the burro the center of interest. Notice that he faces into the picture, and that he cuts across one of the intersections we can sketch in the picture area. The bottom was flashed to add gray.

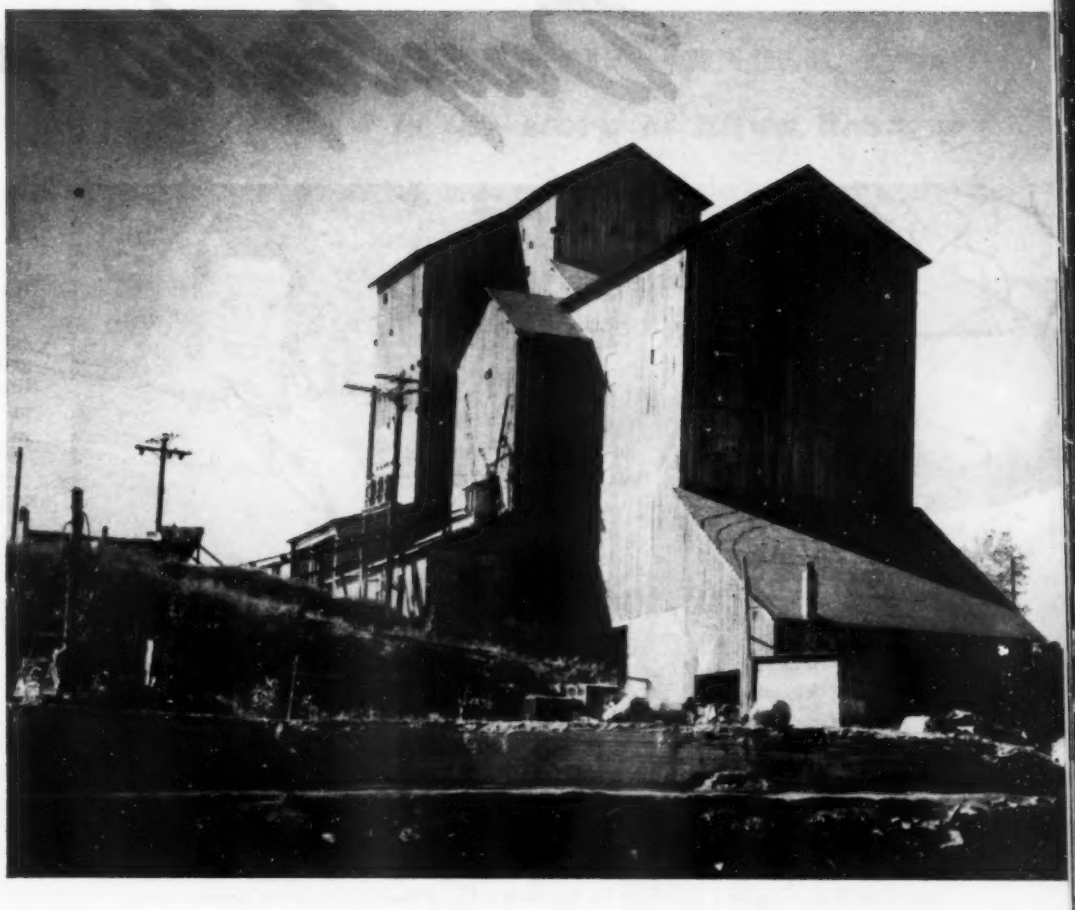


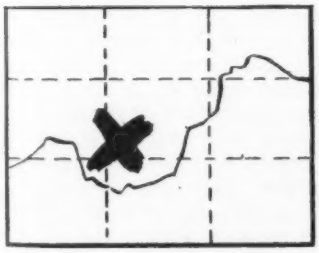


New coccine painted on negative of this particular print helped to hold back tones in rock strata to give photograph better separation and shadow detail. The shadow cast in the lower front of the photograph has a framing effect, and keeps interest within picture.



Repetition of shapes that vary in size, with a strong light contrast, gives a feeling of solidity to this composition. The flashed-in tones in the sky which surrounds building serve to hold the picture together and set off peaked roofs which seem to serve as center of interest.





This picture of the Grand Canyon has strongest light in middle left third, which adds to dramatic quality of the print. Bottom of the negative required local intensification to bring out shadow detail in the final print. Taking the picture required a haze-cutting filter.

Daylight + Flash

Left, in a backlighted photograph which has little foreground detail, the author illustrates the result of using an exposure which is a compromise between foreground and background exposure readings. At the right, Rus Arnold shows the result of an exposure based on a background reading, and for which he has used a No. 0 flash to bring out shadow detail.

Lack of foreground fill-in illumination caused this near silhouette at the left, made at 1/200 at f 16. Repeating the shot, Arnold this time added the correct amount of flash-illumination to balance the foreground effectively with the background. To weaken the bright light of a No. 5 bulb, it was fired from a spot several feet to the rear of the camera.

IT WAS a hot, sultry day. The men in the crowd outside the church loosened their collars. On the steps the press photographers were checking their cameras to see that all was in readiness. There would be only a few seconds while the famous bride and groom were rushed out to the waiting limousine; mustn't miss this one chance at that shot. Let's see . . . film-holder in . . . slide drawn . . . shutter cocked . . . flashbulb in place . . .

"These press-photographers!" a disparaging whisper was heard above the expectant silence. "All that sunlight, and they still use flashbulbs. No wonder I can't get any bulbs to take pictures of my kid."

Just then the church doors opened, and the newly-married couple dashed out, ducking their heads under a barrage of rice. Flashbulbs popped, the car door slammed, and the bridal pair was gone. The photographers picked up their camera cases and headed for their own cars. One of them, perhaps because he was not as hard-boiled, perhaps because he remembered his own days as a novice, turned to the woman who had whispered to her friend about their use of flashbulbs in bright sunlight.

"You know, lady," he said, "We're not crazy—and we're not extravagant. There are lots of reasons for our using flashbulbs on a job like this one. We can't always know in advance just where we're going to get our one chance at a shot—inside the doorway, out in bright sunlight, or after the couple gets into the car. Unless we get the shot in broad daylight we're going to need that flash, and if we're not ready for it there won't be time to change. And even if we do get to shoot the picture out here in the sun, chances are the groom's hat would throw his face into shadow. After all, the boss wants a picture of the couple's faces, not an assortment of shadows."

No, the press photographer is not extravagant when he uses flashbulbs in bright sunlight. Neither is the amateur. While the flashbulb does add to the cost per shot, it ensures getting the picture the first time, which means a saving on film cost. Add to that the amount of waste involved in trying to print a negative with insufficient shadow detail, as compared to printing a negative in which the flash has built the shadow density up to within easy printing range, and you can see why a few nickels spent for a flashbulb can be a good investment in economical photography.

As for being crazy, the photographer who uses a flashbulb outdoors is no crazier than the photographer who uses a filter, an exposure meter, a telephoto lens, or any of the other so-called accessories without which photography is mere snapshooting. Stripped of its gadgets and accessories the camera is like a pantry without seasoning. It will produce food

=PICTURE

By RUS ARNOLD, APSA

Here is the story of fill-in flash, a technique that will add sparkling detail to your outdoor photographs

A long, cool drink from a bubbling water fountain is a fine picture—but only because of a fill-in flash. For it is this extra illumination which wipes away any unsightly shadows, brings out details in the fountain, and puts plenty of punch and sparkle in the photograph.

that is edible, but with no uniqueness, no creativeness, no excitement.

Yet the flashbulb, like curry or paprika, needs judicious use. There are some chefs who season by intuition (spelled "experience") and others who season by careful measurement. And there are photographers, like chefs, who season by guess or by gosh—and the results unfortunately show it.

The proper use of the flashbulb outdoors does not necessarily depend on experience in taking flash pictures indoors. In fact, too often the errors made outdoors are due entirely to misguided use of indoor flash technique. In the case of the press photographer taking a picture outside a church, a courthouse, or a railroad station, this may be unavoidable. He probably realizes it is impossible to set a flash camera so that it will give the best possible pictures, at the same setting, both indoors and in bright sunlight. Yet he must make a compromise setting, because he cannot tell in advance where his picture will be shot; and though he may get a night-time effect on a daylight picture, at least he has the shot, and for him that will be enough.

The same photographer, when he knows definitely that he will be making his flash picture in bright sunlight, can change his camera setting so the result will be a natural-looking, daytime shot with good shadow detail and sunny background. He cannot do this, on the average sunny day, by setting his camera the same way he would for a flash picture indoors even though he wishes that he

Rus Arnold takes a meter reading of the background, while his model, Peggy Smith, uses his camera case as an improvised seat.

Flash-on-camera is used by Arnold when the bulb fired is of the right size to balance background illumination exactly.

Peggy Smith's shadow shows the position of the sun, and to balance that backlighting properly, Arnold diffuses his flash.

A chalky texture is the mark of too large a flashbulb. Remember, it is best to underlight—not to over-illuminate.

Reducing the amount of light gives a better skin tone. If you wish to weaken your flash, place a handkerchief over it.

Studio lighting can be simulated by holding your flashgun away from the camera. The shadows will add depth.

Exposure for flash alone allows a night effect. If background is too bright, change camera angle, include ground.

might be able to do just such a thing.

You see, there are two basic ways to shoot outdoors with flash. One is to expose for the flashbulb, the other is to expose for the daylight. They are as different as night and day—and so are the resulting effects.

Take a typical situation. You want to take a picture of Mary McNabor with her new bicycle. You can, of course, follow the old rule about having the sun at the back of the camera. This will give you pretty much the same kind of lighting you got from the use of a flash at the camera, and in either case if the exposure and development are correct you will get good detail. Outdoors, however, you will have some difficulty with Mary. If the sun is at all bright enough for picture taking, she will squint and grimace. What is more, the sun is likely to be so much higher than lens-level that it may throw dark shadows into the eye-sockets, under the nose and chin, and (if she is wearing a hat) over the entire face.

Perhaps you can move things around so that the sun comes from one side. This will be more comfortable for your model, and will enable you to get a much better expression on her face. The lighting, however, is likely to be so contrasty as to be beyond the range of your film latitude. If you expose for the sunlighted right cheek, the left cheek will be black in the finished print. If you expose for the shadowed left cheek, the right cheek will be chalky in the print.

You can move things around some more, so that the sun comes pretty much from in back of Mary. Provided the sun doesn't shine right into the lens you can get pictures this way, but the chances are you'll get a silhouette. A meter reading of the face will show that you need an impractically long exposure to get detail in that part of the picture, and even if you could get your subject to hold still long enough, the sky and the sunlighted areas of the scene would be completely overexposed. In short, pictures taken outdoors in summer-time can be very disconcerting, especially close-ups and portraits. Either we get black shadows, or we get chalky highlights or both.

Actually this is not a new problem. Photography has been in this quandary since it was first invented. Only in recent years have we really begun to recognize it as a problem. We have been to the movies often enough to become accustomed to full shadow detail in the brightest, most sunny scene. We have examined enough of the better magazine and advertising photography to expect crisp detail in the brightest highlight and deepest shadow. Some of us have even thought deeply enough about the aesthetics of the art to feel that since the eye shows us detail in the brightest highlight and the deepest shadow, our photographs should do the same.

And so today we can no longer excuse those deep shadows under hats, in the eye-sockets, under the nose and chin. We want bright sunny scenes to be sunny and bright even in the shadows. We want the kind of picture we've been getting indoors with our flash cameras.

So we try using the flash outdoors. We've been told often enough that the flashbulb is the answer to outdoor shadow detail. Somehow our pictures, while often interesting, more often strike a false note—like the newspaper pictures of noon-hour Community Fund rallies that look as if they were taken at midnight. We want detail in the shadows—but we don't want shadows where the highlights should be. We want bright, *sunny* pictures.

The flash worked fine for a picture of Mary McNabor in her living room. Why can't we use exactly the same procedure outdoors, when taking a picture of her with her bicycle? As a matter of fact, the same procedure will work just as well on her outdoors as it did indoors. But there is now more to the picture than just friend Mary. There is the background—the sky, or the buildings across the street. Indoors your background was close enough to the subject to get the benefit of the flash—and even if it didn't that wouldn't matter much. Outdoors your background is likely to be so far away that the flash doesn't reach.

Still, you say, the background outdoors does have sunlight on it. So it has. But ask yourself this question: which is brighter, the sun or the flashbulb? The

The ABC's of ENLARGING

Photographs and Text
By JOSEPH FOLDES

This expert technique for drying and straightening makes matte or glossy prints that lie flat

BY THE time your prints are ready to come out of the wash water, you have put quite a bit of effort into them. To protect this investment in time and materials—and to make certain that you don't lose any of the effectiveness you have worked so hard to get—each subsequent step must be handled with great care.

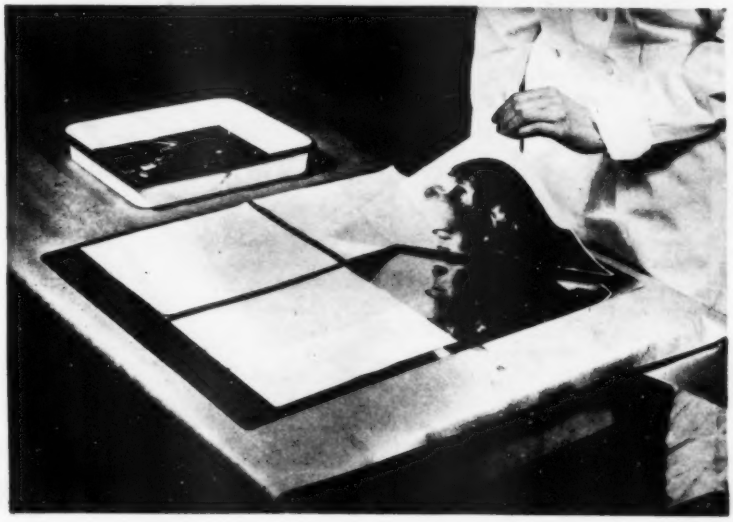
The image on the paper is in its final form after proper washing, and to make it permanent there remain only two more steps: drying and straightening.

If you have used a glossy paper, you probably will want to dry the prints on a ferrotype plate. You must buy at least one of them. The best are chromium plated, and highly polished. Black lacquered ferrotype plates also can be obtained, and are somewhat less expensive, but their surfaces are more likely to become scratched with use.

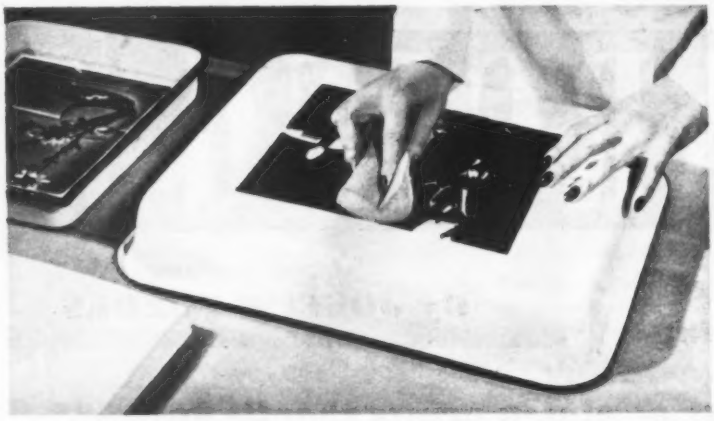
The first step in ferrotyping prints is to wash your hands well with soap and water. Then rinse the washed prints thoroughly in fresh running water, rubbing their surfaces lightly with your hand, a sponge, or a wad of cotton to remove any scum or precipitate that may remain on them. After rinsing, place the prints in a clean tray about half filled with water, where they will remain until they are placed on the ferrotype plates.

If you wish you can add 1 part glycerin to 10 parts water for this final rinse. The glycerin will prevent brittleness in the dried prints and will make them easier to handle in trimming and mounting. At least five minutes should be allowed to permit the glycerin to penetrate the emulsion.

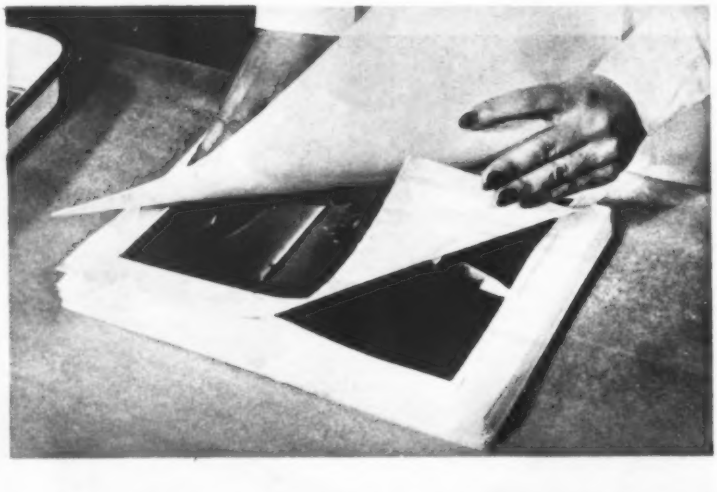
Now take the ferrotype plate and wash it under running water, using your hands exclusively. Hold the plate under the running water and rub it with open palm. Be careful not to scratch the polished surface of the plate—take your ring off, if you wear one. When well washed, place the wet ferrotype plate on a table, polished side up. Do not wipe it. Take the washed prints from the tray of water and place them face down on the clean ferrotype plate, one by one, until it is



1 Glossy prints are placed face down on ferrotype plate (above) for drying. Both prints and plate must be clean and wet. Then a pad of newspapers or a blotter is placed on top, and a roller is applied carefully (below) to squeeze out excess water. Contact between emulsion and plate must be good for a uniformly high gloss.



2 **Any surface** except glossy is dried by first removing excess water with a sponge (above) while the print is supported on the bottom of a clean tray. Then prints are placed between blotters (below) to remove more moisture. They can be taken out at this point to be dried in a blotter roll, on an electric dryer, or simply by hanging.



full. Cover them with two layers of clean newspaper (or blotting paper) and go over this sandwich lightly with a roller squeegee. With the other hand you have to hold the newspaper or blotter to prevent it from slipping. When you have gone over it lightly once, you have removed most of the water from between the prints and the plate. Now you go over it again, applying firm pressure. These steps are illustrated in Figure 1. Remove the newspaper or blotter and the prints are ready to dry. If you have a dryer, put the plate with the prints into it (the prints are on the top), cover it with the canvas and wait until they are completely dry. If you have no dryer, you will have to air dry them. Just let the plate stand undisturbed until the prints peel off by themselves.

Things which can ruin the smooth high gloss of the ferrotyped prints are:

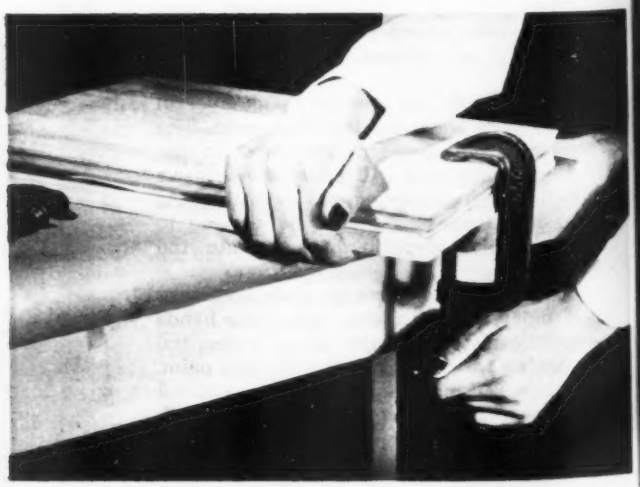
1. Dirty or scratched plates. Never let anything touch the surface of the plate but your bare hand. Do not use a sponge or a cloth to clean it. It may contain or carry hard particles which can scratch the plate. Always keep the plates in their paper bag (in which they came) after use. If the bags are torn, make new ones. Remember that the gloss on your print will be only as good as that of the plates themselves, and take every precaution to preserve their surfaces.

2. Dirty water. Many localities have water containing sediment, which harms the plates and the prints if allowed to accumulate on the prints while washing. Make sure that you rinse prints and plates in running water before use.

3. Insufficient pressure when squeegeeing. Apply enough pressure and make sure that you go over the whole print so it is in firm contact with the plate.

4. Prints stick to plates while drying. This is as it should be. Do not try to peel them off, because it may damage the print. Wait till they come off by them-

4 **To straighten** prints already dried, backs are moistened with a damp sponge. Prints are stacked face to face and back to back with care to avoid wetting the emulsion side.



Breadboards make a sandwich into which stacked prints are placed. The right hand holds them together while a C clamp is placed on one end and drawn up fairly tight.

selves. However, if your plate is not entirely clean or it is badly scratched, the print will stick to it at the dirty or scratched spots and may be ruined.

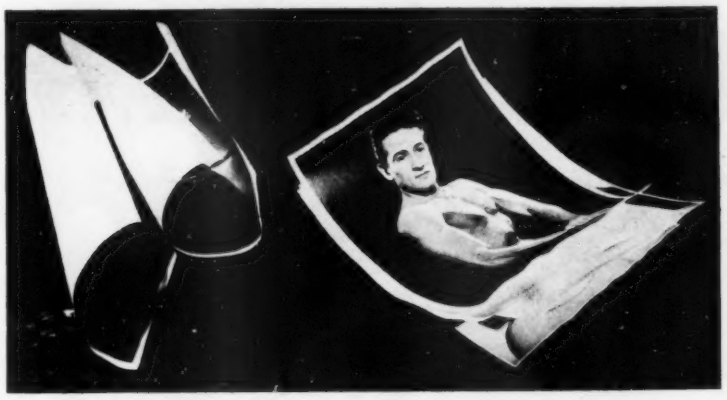
When drying other than glossy prints, the procedure is entirely different. We collect the well washed prints in a clean tray of water. Turn another tray upside down. Wash the bottom of it clean. Take one print, place it emulsion side up onto the bottom of the upturned tray. Take a wet, but squeezed out sponge and wipe the emulsion side of the print with it (see Figure 2). This wiping has a double purpose. First, it removes the water from the print; second, it removes any dirt or scum which may have accumulated on the print during washing. Be gentle, as the wet emulsion is rather delicate. Squeeze out the sponge after every few prints to retain its absorbing power.

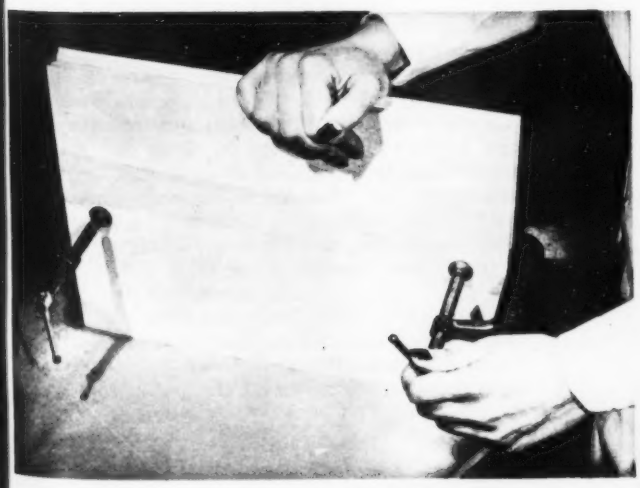
After the prints are wiped off we put them between blotters. One blotter, one print—one blotter, another print—and so on (see Figure 2). When all the prints are between blotters, we apply a little pressure on the top blotter in order to make good contact between prints and blotters to absorb all surface moisture.

If we have a dryer, at this point we take the prints from between the blotters and put them into the dryer—emulsion side up, toward the canvas. If we do not have a dryer, we can use a blotter roll sold in photo stores. Put the prints into the roll with emulsion toward the fabric, and let them stand until dry. Finally, if we do not have any facilities for drying the prints or if the emulsion has become dangerously softened, we just hang them on a string by clothespins, applying one to each corner (the bottom ones for weights) and let them dry as shown in Figure 3. Papers with delicate emulsions (Charcoal Black, Kodalure, etc.), and toned prints should be dried by hanging, even if we have a dryer or

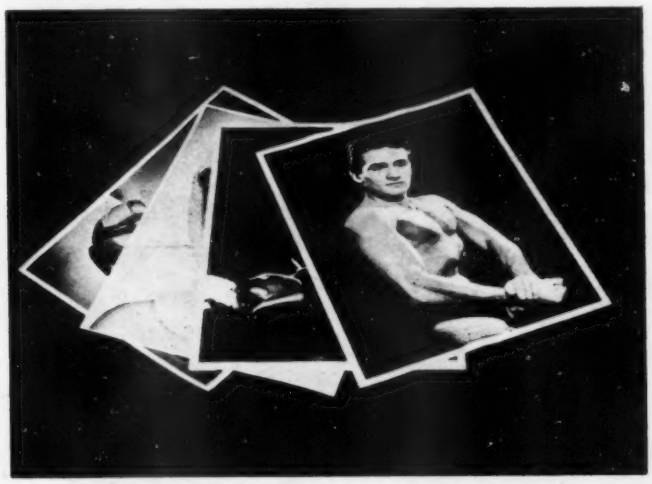
(*Continued on page* 150)

3 A simple way to dry prints is to hang them in the air as you would negatives (above). This is necessary when the emulsion is softened by heat or toners. When dried this way, prints curl excessively as shown below (left) in comparison with those dried by electricity (right). However, both types can be straightened easily.

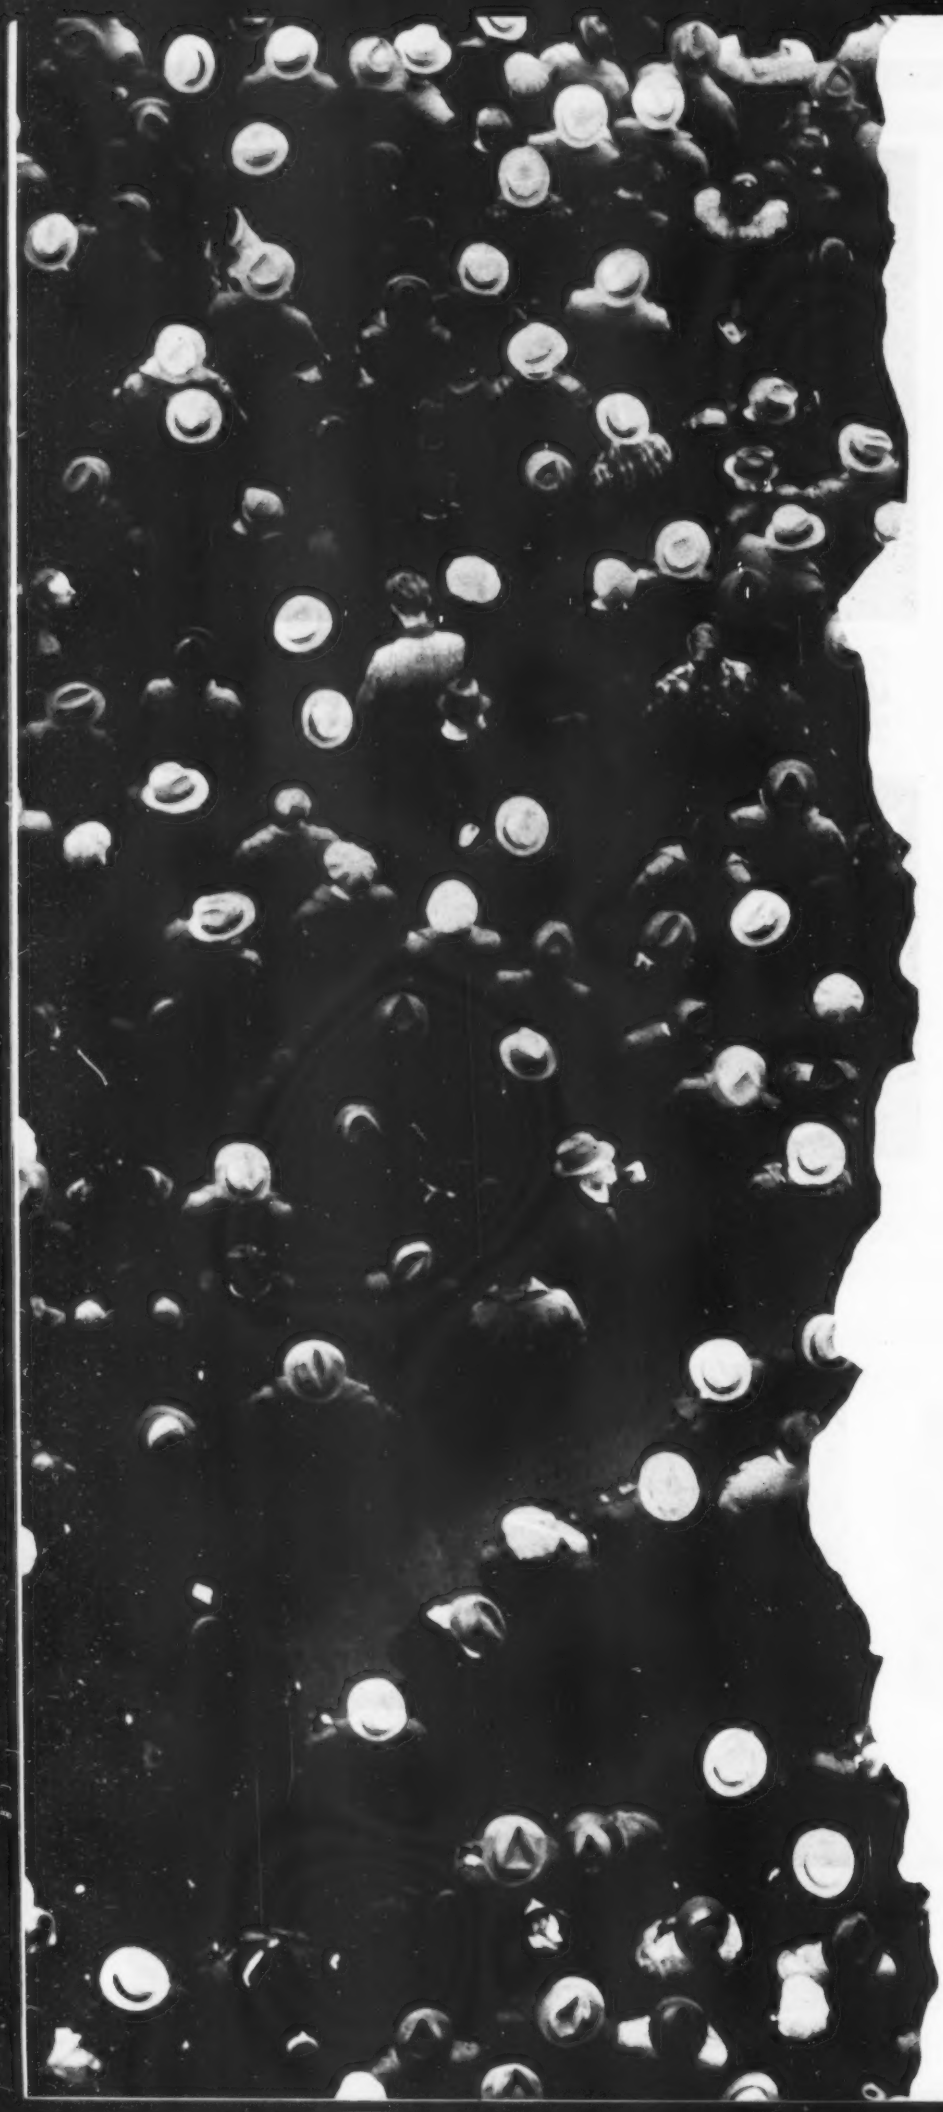




The right hand still holds the sandwich firmly to avoid slipping as another C clamp is applied. Then both clamps are drawn up. A print press is easier to use, but more costly.



Finished prints are perfectly flat after about 24 hours in the press, but will curl up again if allowed to lie around in the air. They should be stored where they will be held flat.

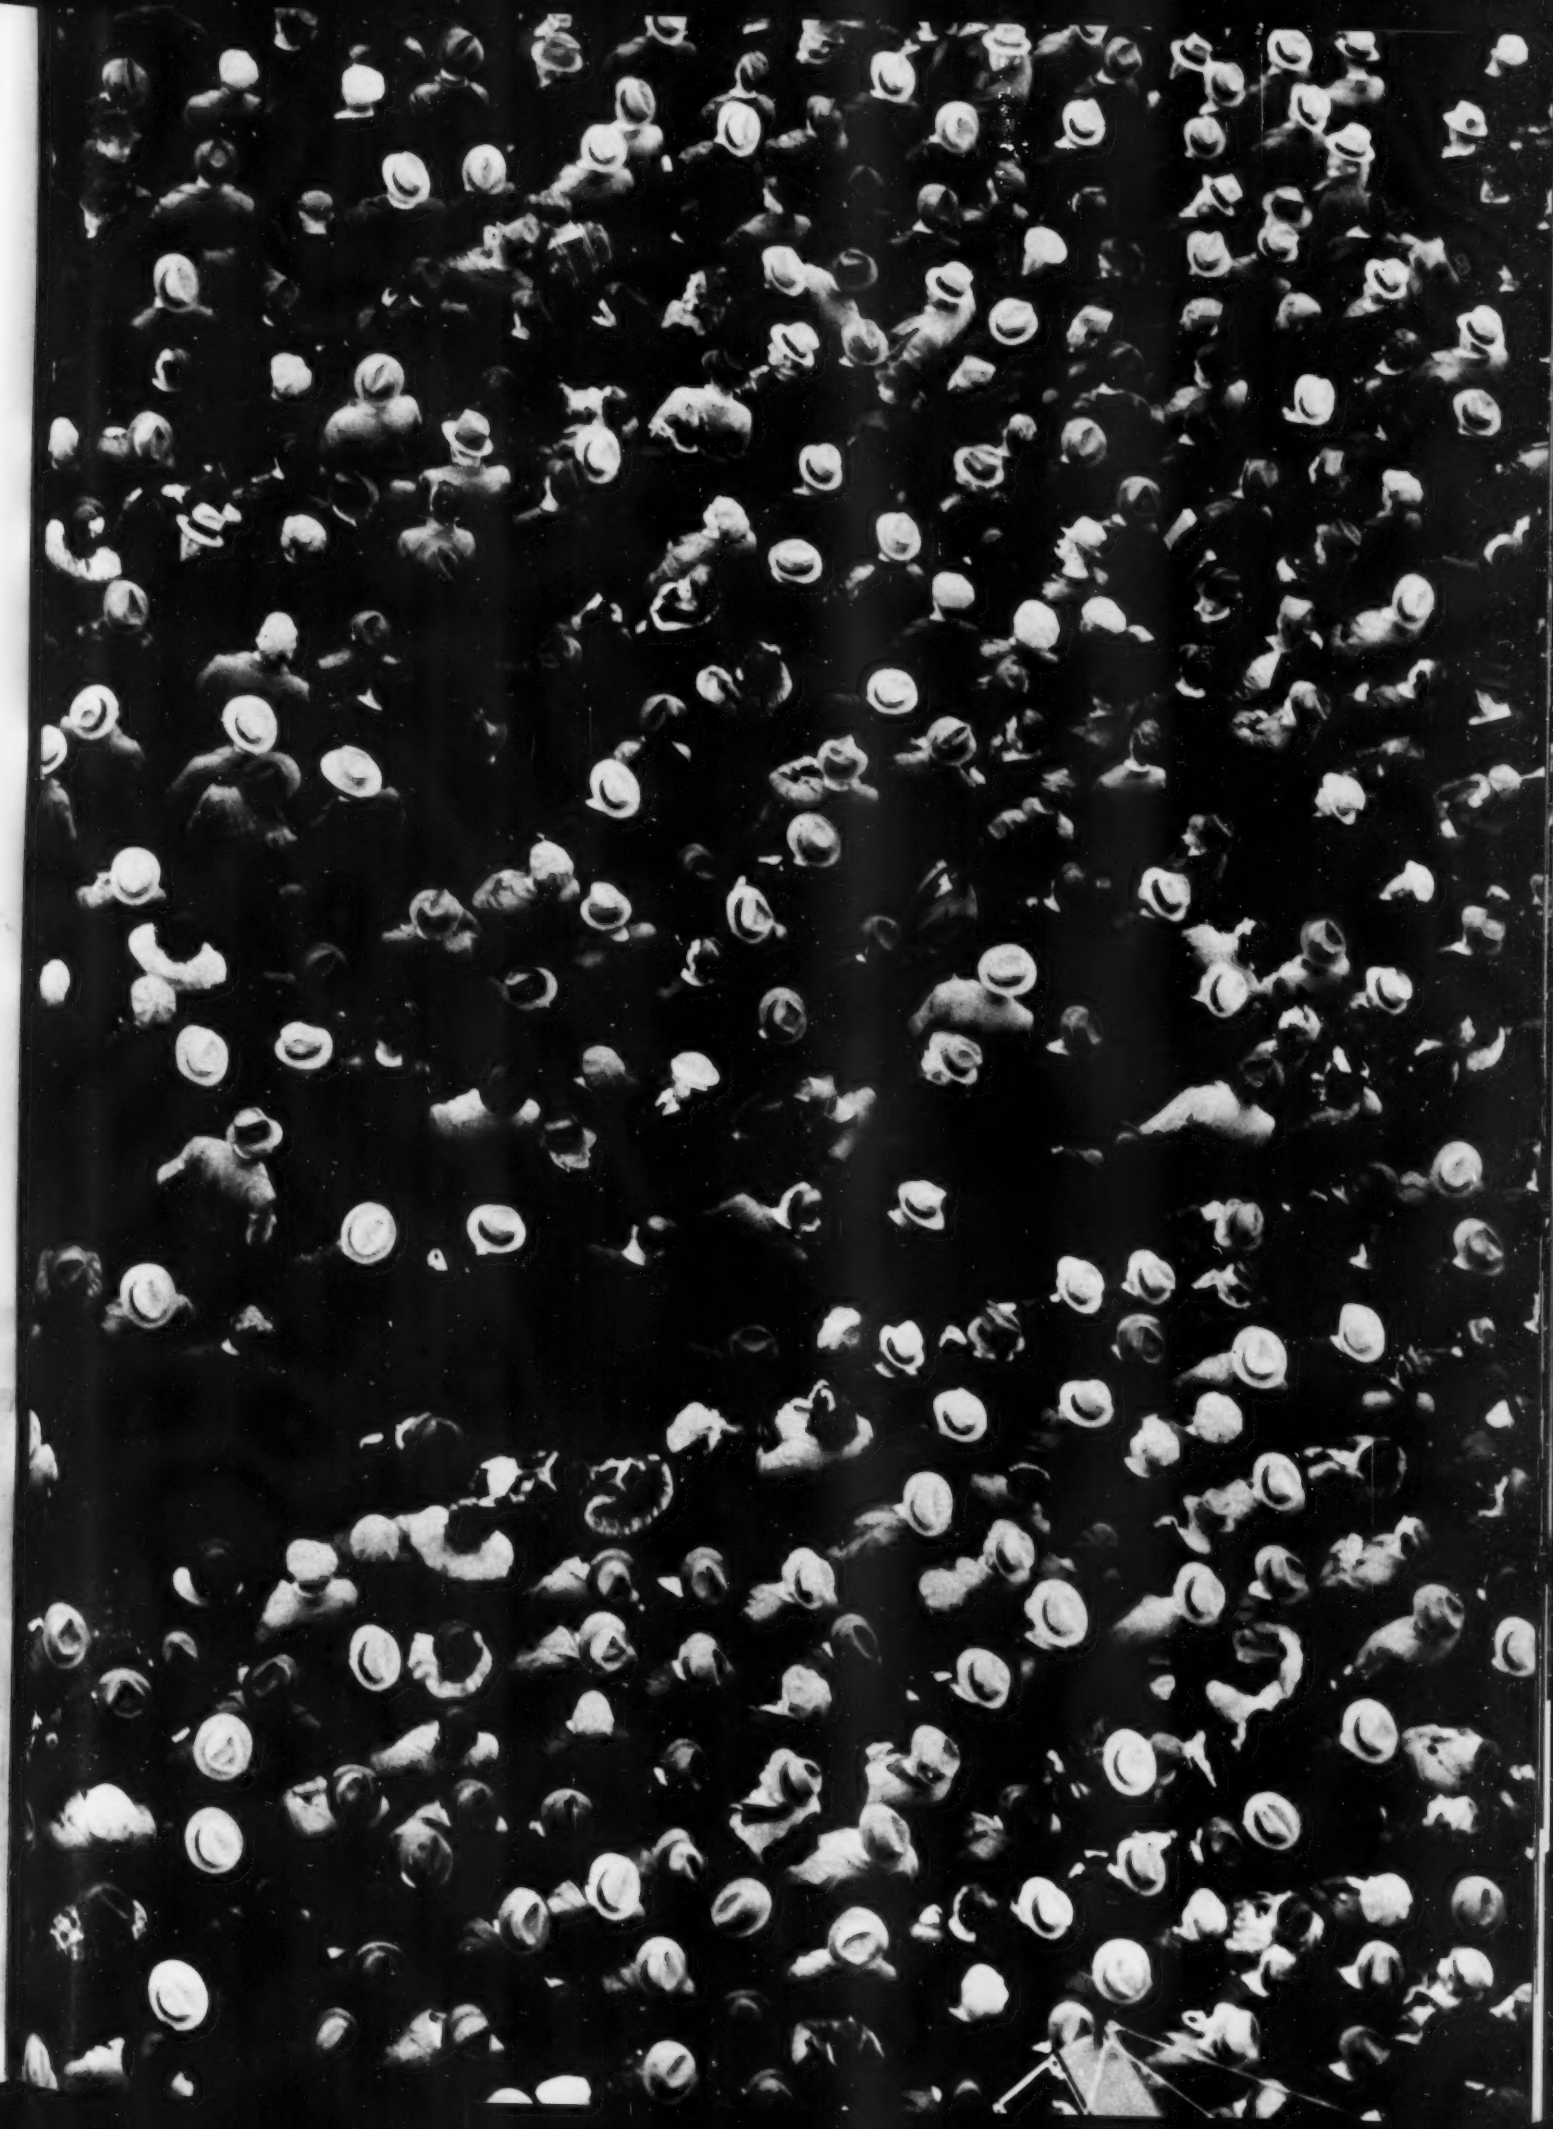


Pictures of People

PEOPLE ARE MOST interested in other people. It doesn't particularly matter whether they are dentist, doctor, dancer, or ditchdigger. No matter what the station or the degree, they are curious about other people. Newspapers build their circulation on this fact, radios cry it daily, and magazines owe life to that truth.

Photography proves it too—what do you like to photograph most? Probably people at work, people at play, but nearly always people. Why do you look at pictures of people? Perhaps because there, in black and white, one can sometimes catch a faint reflection of his own image, a similar face, a similar vocation, a similar feeling. There is always that curiosity about the other fellow—who is he, what does he do? For the photographer, people are drama; they make his pictures live—and he turns his camera on them and captures them in a moment of work or play, of sadness or joy. But there are many photographers and many ways to picture people, for they are elusive, as difficult to portray as they actually are, instead of as in a formalized portrait. For although a portrait may be pretty, it is people's lives and actions which mark them, and how effectively these are captured marks the proficiency, the perceptiveness, the sensitivity of the photographer.

Art Siegel's people look alike, yet each has a separate life, traveling in his own orbit, with his own peculiarities.



It's a quiet night in the Gaston Avenue fire station in Dallas, and a game of dominoes holds the stage as the perennial fire fans stand and kibitz. Photography by Ulric Meisel.

To some, books are the very breath of life, and perhaps with cause, for illuminated letters and hand-carved type have a rare, quaint charm. The photograph is by Ike Vern.

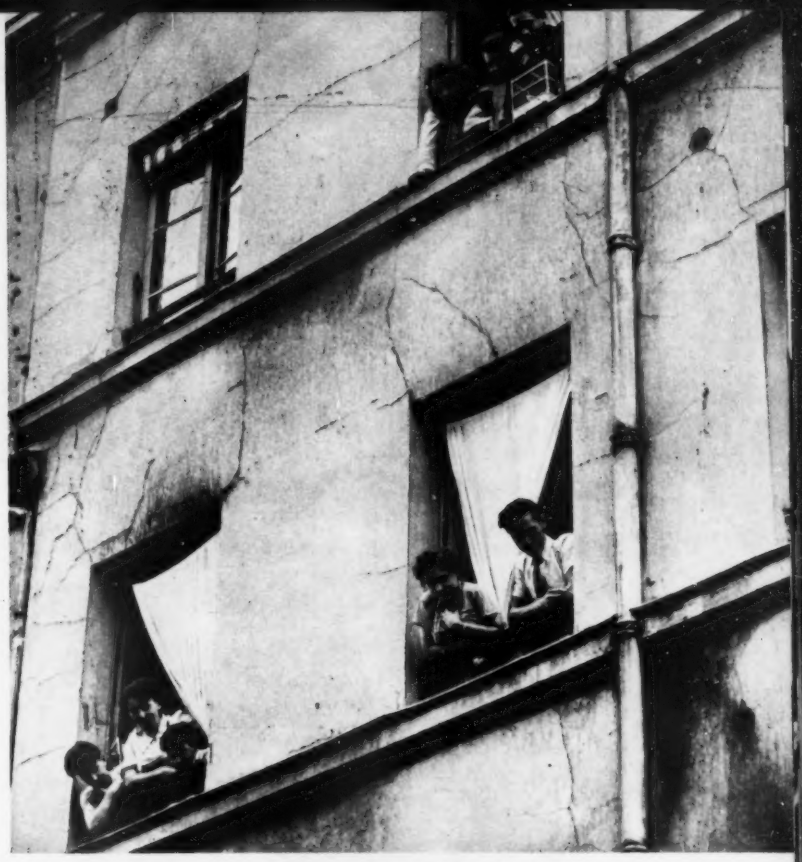
TWO YEARS
IN
SOUTHERN SEAS

"Tommy's Place." Tommy is an ex-radio performer who frequently plays and sings for his customers in his Tomball, Texas, restaurant. Esther Bubley is the photographer.

Mrs. John J. Kratzer of Allentown, Pennsylvania, interrupts her gardening for a quick glance at the early morning mail. Photograph by Sol Libsohn.

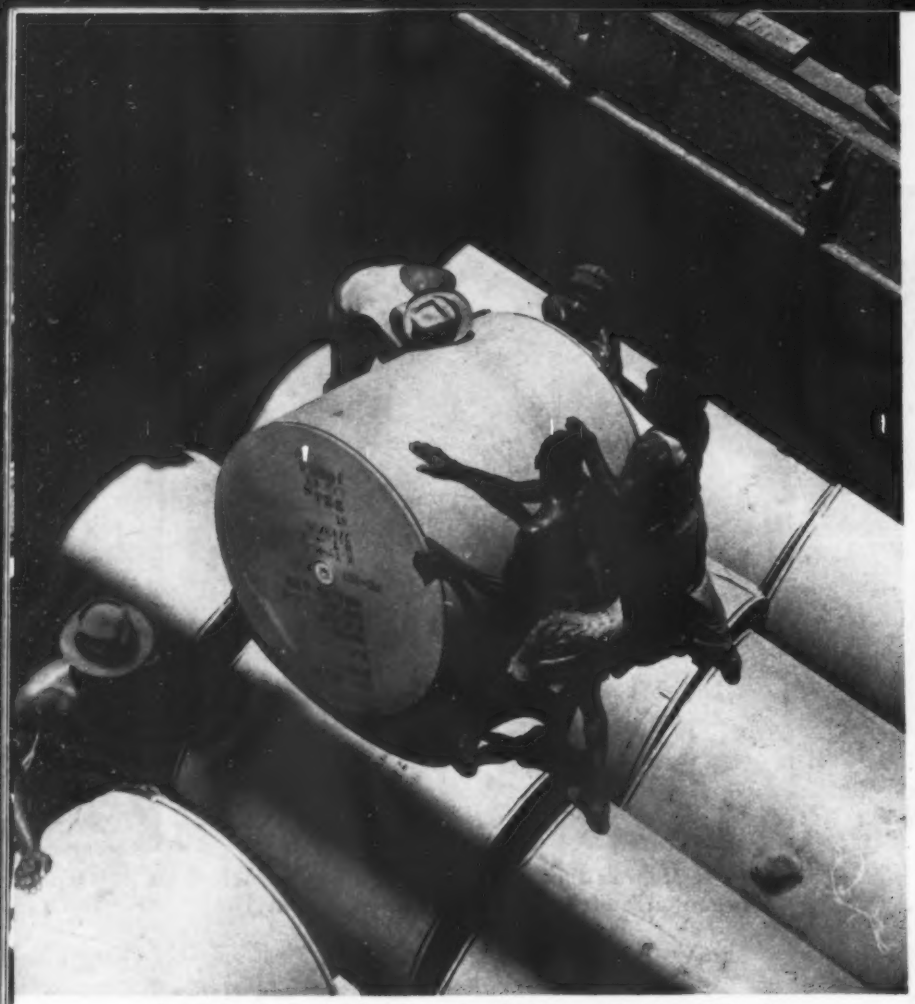
Bales of straw make a swell grandstand to watch the big top go up on an early morning. Work and worry seem to be forgotten, or put aside as Robert Freeberg catches people's complete absorption with all the proceedings.

Chicago's Maxwell Street is a heterogeneous collection of products and people. Here you can find anything, and everybody. Arthur Haug made this picture for a forthcoming book on Chicago.



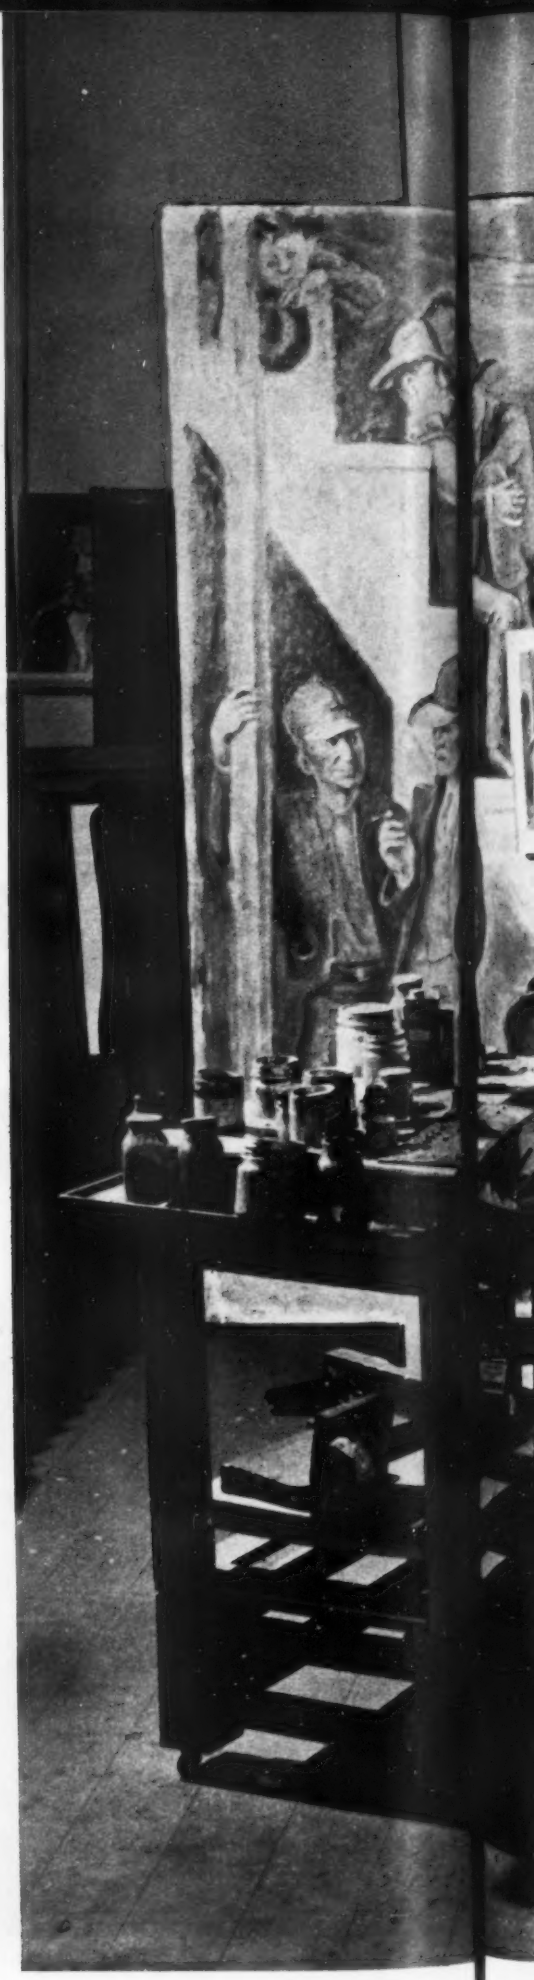
Fritz Henle's Paris was a pleasant place. When an organ grinder passed, people hung out the . . .

. . . *windows, or stood* in the street and clapped delightedly to see the tiny monkey dance and beg.



Stevedores in the hold of the freighter "Point Chico" set rolls of paper in place. Selby Cramer, photographer.

Truckers, watched by Louise Rosskam's camera, make a fast tire change on Sixth Avenue in New York City.



Artists work to catch the essence of people and the movement of things with brush and pigments as a photographer does with his camera and films. This was taken by Fritz Henle at the Art Center in Colorado Springs, Col.

All the world loves a lover, the old bards would say, and perhaps they were right. Karl Gullers, Swedish photographer, caught a pair.

Dress rehearsal at the St. Louis Municipal Opera, and hearts are high as the wardrobe mistress adjusts a costume. This was taken by Paul Berg, "Post-Dispatch."

Some people devote their talents to helping other people to enjoy the beauty of a pageant or of a theatrical presentation. Here are ballet dancers, effectively framed by photographer Paul Berg in an unusual silhouette.

A fisherman's life, pictured by Karl Gullers of Stockholm, is toil without end. When work is done, and fish ashore, there are always the nets to mend.

ALL ABOUT YOU there's a world bright and gay and vibrant with color . . . dozens and dozens of color shots begging to be snapped in all their beauty. If you have been working in black-and-white exclusively, you'll find that color offers an exciting new challenge to your skill. Your very first shots will open your eyes to what you've been missing. Consult your dealer about Kodak color films . . . *Kodachrome* for most miniature, sheet-film, and home movie cameras . . . *Kodacolor* for most roll-film cameras . . . new *Kodak Ektachrome* in sheets, for processing in your own darkroom.

BULLETINS

NEWS OF KODAK PLANS AND PRODUCTS

For Christmas—Attractive greeting folders for Kodachrome Prints 2X and 3X will again be available this Christmas. If you haven't yet attended to your order for holiday prints, a word to the wise should be reasonably adequate. See your Kodak dealer now, and avoid the late-season rush.

New Papers—Here's news of three new Kodak printing papers. Two are professional contact-printing papers—yet of interest to the advanced amateur. The third, a fast enlarging paper of high quality, is of equal concern to amateur and professional.

Kodak Platino is the new enlarging paper. In speed, it is intermediate between Kodabromide and Kodak Opal—and is a worthy companion to both. With normal development, it yields warm blacks—much warmer than Kodabromide, somewhat less warm than Opal. Tonal quality and gradation are superb. For still greater warmth, it may be toned in Kodak Brown Toner; and when so processed, it yields a true sepia color—a rich chocolate brown. For portrait studies, scenics which require warmth of tone, and much other material, Platino affords a splendid compromise between Opal and high-speed Kodabromide. It will be available in two contrasts—2 and 3—and four combinations of tint and surface:

G Cream White, Lustre, Fine-Grained
P Old Ivory, Lustre, Fine-Grained
Y Cream White, Lustre, Silk
F White, Glossy, Smooth

Illustrators' Azo is a new contact paper of moderate warmth, designed primarily for the illustrator and commercial photographer. It will be available in five contrasts—0,1,2,3, and 4—and both single and double weight in two surfaces:

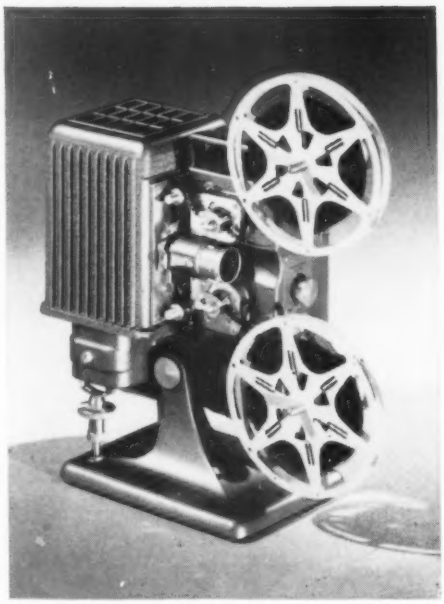
E White, Lustre, Fine-Grained
F White, Glossy, Smooth

Kodak Athena is a new contact paper of portrait quality for prints of warmth, brilliance, and fine gradation. It is not to be confused with the old Vitava Athena, which produced olive tones. The new paper will be available in contrasts 1, 2, and 3, double weight only, in the following surfaces:

B Cream White, Lustre, Smooth
G Cream White, Lustre, Fine-Grained
Y Cream White, Lustre, Silk
P Old Ivory, Lustre, Fine-Grained

These new additions to the existing types provide a Kodak paper to fit virtually every desired need in weight, surface, color, warmth of tone, and printing speed.

New Kodascope—Owners of 8mm. movie cameras will welcome news of the new Kodascope Eight-90, Kodak's finest 8mm. movie projector. The Eight-90 is designed for a 750-watt lamp—interchangeable with a 500-, 400-, or 300-watt. Its standard lens is a 1-inch *f*/1.6. The optical system is fully Lumenized; drive shafts are enclosed; automatic loop formers establish the correct loop length at the touch



of a finger; both still and reverse projection are provided; and there's a handy finger-tip adjustment for screen elevation. Over-all design and finish are unusually attractive; and the machine is well balanced for lifting. Your Kodak dealer will have additional specifications and details.

"Suntan" Cases—Carrying cases for many Kodak cameras now appear in a smart new leather color: *Suntan*. Already available, or soon to appear in this shade, are the Field Case for the Kodak Reflex, the Field Case for the Kodak 35, the DeLuxe Field Case for the Kodak 35 Range Finder Model, and the Field Case for the Kodak Vigilant and Kodak Monitor Six-20. New Series V and Series VI Kodak Combination Filter Cases are also being made in Suntan shade.

Positive Film—Kodak Positive Film, 35mm., unperforated, is now available in 50-foot, 100-foot, and 200-foot rolls. This film, used by many miniature camera enthusiasts to print film positives for projection as 2 x 2-inch slides, is inexpensive and easy to process. For black-and-white titles, Kodak High Contrast Positive Film, 35mm., is available in the same roll lengths.

Carbonate, Monohydrated—Most published Kodak formulas specify Kodak Sodium Carbonate, Desiccated. Many photographers prefer Kodak Sodium Carbonate, Monohydrated, because of its ease of handling, and formulas published in the future will specify monohydrated carbonate.

To convert an existing formula, multiply the indicated quantity of desiccated sodium carbonate by 1.17; the result indicates the quantity of monohydrated sodium carbonate to use.

New Lens For The 2A—A new lens is available for the Kodaslide Projector, Model 2A. It is a Kodak Projection Ektanon 7½-inch, *f*/4—similar in design to the 7½-inch *f*/4 made for the Kodaslide Projector, Master Model. The Kodaslide Projector 2A may also be purchased with the 7½-inch lens instead of the regular 5-inch *f*/3.5.

"Dupes" From Ektachrome—It is now possible to obtain Kodachrome Duplicates and Kodachrome Sheet Film Duplicates from Kodak Ektachrome Transparencies. The prices are the same as for duplicates made from Kodachrome Professional Transparencies. Orders are handled through your Kodak dealer.

Chamois Again—Kodak Photo Chamois is again available in two sizes: 9 x 11 inches, and 11 x 13½ inches. This is an unusually fine grade of chamois, especially selected for its freedom from rough and scratchy areas. Because dirt and grit wash out readily, the material is unequaled for wiping down negatives after washing; careful workers prefer it over the traditional sponge.

Improved Slide Box—The all-metal Kodaslide File Box, popular before the war, is back again—with improvements. The cover is now hinged at one end, with a spring catch at the other; a space for noting down the contents is provided at one end. Basic construction is still the same—strong metal with a silver-wrinkle finish, four metal separators inside to help group slides according to subject. The capacity of each box is 150 Kodaslides.

New Darkroom Apron—Are you an apron spurner? Do you *like* developer stains on your clothes? Or is it simply a matter of not having found a really good apron? Your attention is respectfully called to the new Kodak Darkroom Apron. It's made of tough, moistureproof vinyl plastic—not a plastic-impregnated cloth, but sheet plastic. It has a waist cord that not only serves to tie the apron, but also does duty as a towel loop. At the bottom, a turned-up drip cuff furnishes protection from any drops of processing solution that run down the front of the apron. A utility pocket of ample size offers added convenience. Apron dimensions are 30 x 35 inches for the medium size, 36 x 45 for the large. And all edges are protected by a binding of vinyl plastic. The price is $2.25 for the 30 x 35-inch size; $3 for the 36 x 45 size.

See your Kodak dealer

KODAK products are sold through Kodak dealers, any of whom will be glad to complete the descriptions of Kodak products which are mentioned in these pages. Usually, too, they will give you opportunity for firsthand inspection of the advertised items.

And in matters of general photographic information your Kodak dealer will be found to be well and soundly informed.

Prices subject to change without notice

ONCE in a blue moon (or a long summer) a picture appears with something to offer almost every photographic theorist. Connoisseurs of geometric composition, viewing this one, will find an ample budget of implied diagonals, S-curves, stabilizing pyramids, and rhythmic repetitions of line and form. Fanciers of genre and human interest will relish the exultant quality, the carefree atmosphere. Members of the wire-sharp-focus school will overlook the fuzzy foreground and delight in the crisp lines, the cleanly rendered textures. Through any critical glass, it's a charming picture. The negative is on fine-grained Kodak Panatomic-X Sheet Film. Print on Kodabromide F.

Kodak

Negative on Kodak Super Panchro-Press Film, Type B

Baltimore Harbor—A. AUBREY BODINE, FPSA

EARLY morning dawn scenes with their soft, mysterious light . . . delicate, faint grays . . . half-hidden distance and vague modeling. They tempt you every time . . . and disappoint you, too . . . unless you've learned to depend on the uncanny power of

Kodak Super Panchro-Press Film, Type B

It's a "fast" film, in photographic language . . . but not a film just to catch the whiz of a ball game. You need high film speed for these scenes of quiet beauty in sparse morning light . . . where you must sharpen a deep field, and stop action, too . . . but you also need fine all-round quality. More and more, distinguished amateurs are taking a tip from the press photographer . . . going after the hard ones with the newsman's favorite—Kodak Super Panchro-Press, Type B . . . Eastman Kodak Company, Rochester 4, N. Y.

Kodak Verichrome (rolls, packs)—fast, orthochromatic, for general outdoor use, and for Photoflash photography.

Kodak Infrared (rolls, sheets)—for dramatic effects. In landscapes, produces detail ordinarily obscured by distant haze.

Kodak Super Ortho-Press (sheets, packs)—fine, fast ortho material. Especially suitable for flash shots of near-by subjects.

Kodak Plus-X (rolls, packs)—all-round "pan" film. Extra speed, fine grain, excellent gradation, wide exposure latitude.

Prize-Winning PICTURES

"Meditation," by W. R. Bishop, New York City, first prize in Scenes, Still Lifes.

Winning photographs in five categories are chosen in National High School competition

"Hit It!", by J. A. Astin, Bethesda, Md., prize winner in Hobbies and Recreations.

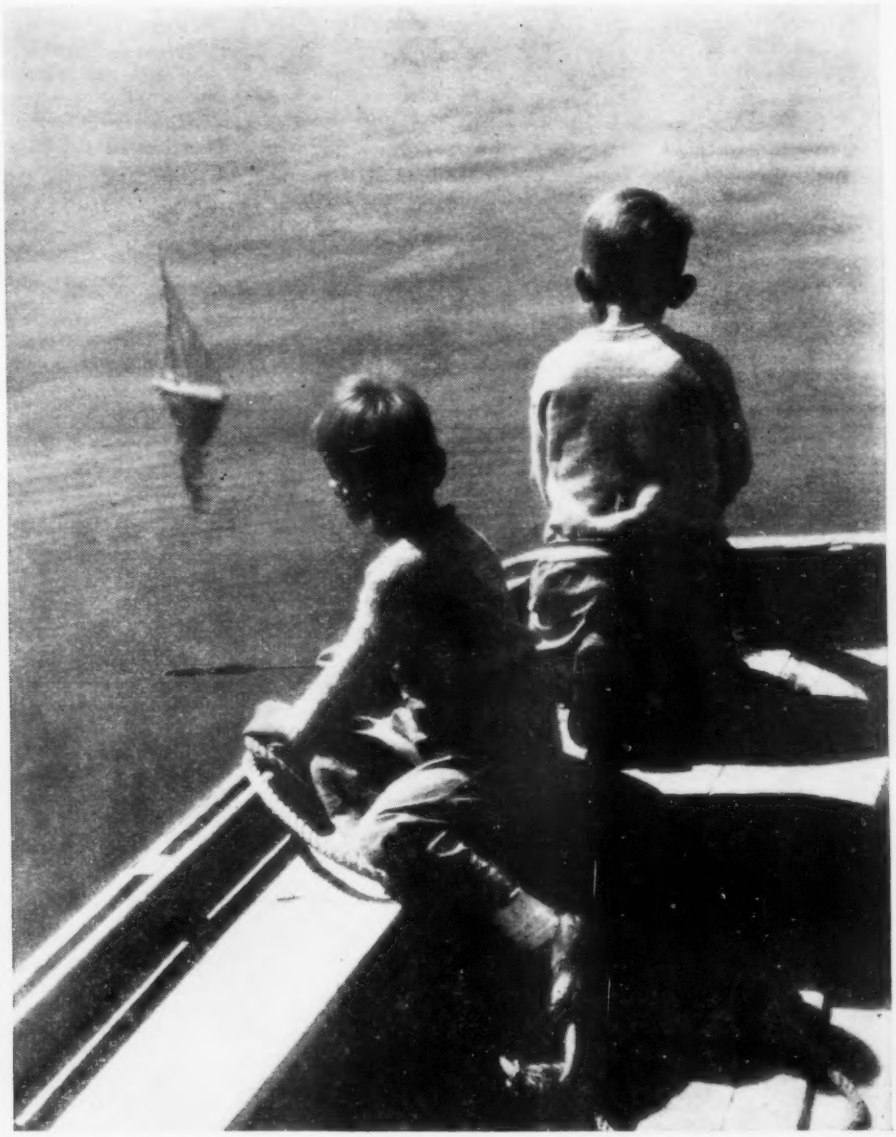
"YOUNG MARINERS," by J. Michael Conner, nineteen year old graduating high school senior, was named Grand Prize Winner of the National High School Photographic Awards. It was chosen by the contest judges because of their belief that it had the greatest interest and appeal among the thousands of photographs entered by the student-amateurs in the contest's five categories.

These entries, covering every conceivable subject, were received by the judges from every state in the Union, and the general quality and diversity made selection of the prize-winners difficult.

Judges for this year's contest were Helen Hayes, theatre and radio star, and amateur photographer, Norman Rockwell, famed illustrator, and K. W. Williams of the Eastman Kodak Company.—

"Looking the World Over," by D. Bowman, Hollister, Cal., winner, Animals, Pets.

"Forecast of the Future," by R. Rippel, N.Y.C., first prize winner, School Projects.



"Young Mariners," judged as best of all entries in the 1947 High School Photographic Award Contest, was made by J. Michael Conner, Loyola High School, Baltimore, Md.

THE LAND OF

When you visit Oklahoma, visit its people, too. Stop and say, "Howdy," and chat a while. Take a closeup for your collection.

TRULY, the region around Oklahoma City, heart of our Southwest, deserves the title of land of many faces. Since that famed traveler, Coronado, first searched its soil for traces of the legendary City of Gold, travelers have been fascinated by its many features.

It's a "Hi, Stranger!" sort of place—bleak, yet with certain beauty, highly industrialized, yet with thousands of miles of grazing lands. It can offer the photographer who comes on business or pleasure the picturesque qualities of America's last frontier. More and more people are coming to know and to picture this region—for there are plains, timberland, mountains, oil wells, and hundreds of other subjects which challenge the imagination and ability of a photographer.

People in the Southwest enjoy visitors, and expenses will easily fit within the limitations of your budget. Some of these things were probably in the minds of delegates to the Photographic Society of America conclave last fall when they chose Oklahoma City for their convention of this year, October 8 to 11. And they'll like it, for the town has a combination of Southern hospitality and Western friendliness.

Photographers who have traveled this area, and returned again, will tell you that few places present a greater challenge to the cameraman. For this is the country where the natives say, "anything can happen, and often does." Will Rogers once remarked of his native state, "if you don't like Oklahoma weather just wait five minutes." Others will tell you that "only the weatherman and newcomers will make predictions in Oklahoma—the weatherman is paid to guess and the newcomers don't know any better."

As in the case of so many so-called superstitions, there is considerable data to prove this point. Weather bureau records show this area is between major storm paths and gets weather

Cowponies and cattlemen are fine photographic subjects. You'll find plenty of the old west left in Oklahoma, for it's a living part of American tradition. Whether you're there on business or as a tourist, remember to pack along your camera.

MANY FACES . . .

By J. GILBERT HILL

America's last frontier offers a cross-section of western life. Here are cattle and cattlemen, oil wells, Indians, and old-time missions

from Alaska and the Gulf of Mexico. But neither stays long. There is sunshine, on the average, 67 per cent of the total possible, and that means good light for shooting—about the best in the country.

As usual, almost any kind of photographic equipment will get the job done if you use it correctly. Generally, however, be sure to bring your filters and light meter. And don't try to outguess the meter. This light is bright and full of ultraviolet, so keep your hat on, and let the wind provide the tan in summer, because it will.

About noontime on a summer day, you can expect to see fleecy white clouds casting thin shadows across a startlingly brilliant landscape, with a tiny house or a herd or some farm equipment far away. It's pretty. But don't shoot!

Drive a while. Remember you can see miles in this terrain and light. Get close enough to get a picture on a negative. Check it through the groundglass or finder and you'll get the idea. Use your filter. Pick something near-by and include it to give perspective—and you can have that picture you want to keep.

There's much industry in the Southwest. But do not expect smoke. Even the oil-burning trains are disappearing with the big Diesels. The fuel throughout this area is natural gas. Buildings are white and clean. At night, with the lights on them, some structures literally shine against a black sky.

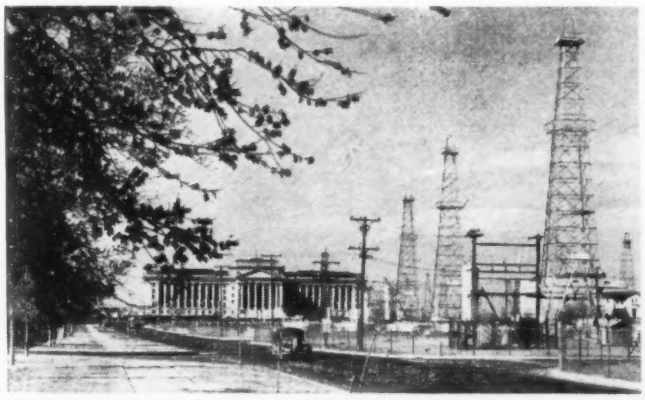
You'll find oil fields almost anywhere. Some of the oil tanks have unusual and interesting shapes. Often they're painted with aluminum in order to reflect the heat of the sun, keep the interiors relatively cool. So remember your red filter; it's fine to bring out that metallic sheen against a perfectly blue sky which will go black without a cloud.

Highways are straight and distances are long. You'll see Indians everywhere. They'll be the young men who service your car, the waitress in the restaurant, the banker, retailer, mining or oil executive, or the dancer in the show.

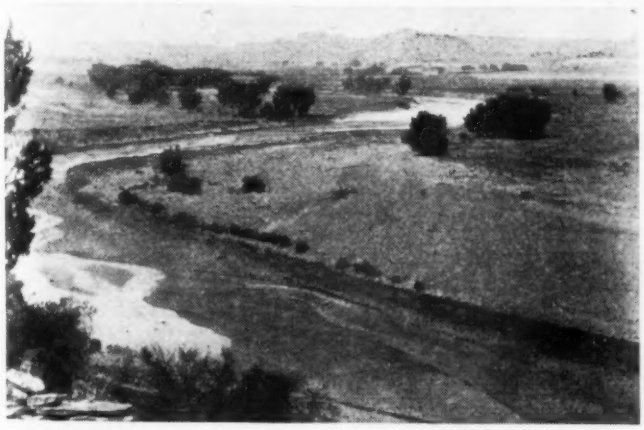
Once a year tradition is kept alive at Anadarko, Oklahoma, in the last week in August at the Indian fair. Tribal members arrive from a dozen states. The deputy U. S. Marshal, the girl next door who was graduated from college last year, the farmer and banker, doff white men's clothing. They dress in the carefully preserved, beaded, white doeskin, handed down through the family, worth hundreds of dollars, and kept in vaults except at ceremony time. The fair lasts a week.

There's a cattle tradition here, too, and the Southwest is proud of its livestock. Wheat and whiteface Herefords go together. Hundreds of men still wear their boots, but they keep their trouser legs out while in town and most visitors miss them. They still like their soft, white hats, which keep the sun out of their eyes and stay on in the wind.

On April 22, 1889, less than 60 years ago, the central part of Oklahoma was opened to white settlement. When the PSA gathers in Oklahoma City in October, (*Continued on page* 90)



It's a country of contrast, for along main street, the steel towers of an oil field rise as neighbors to a library or a city hall.

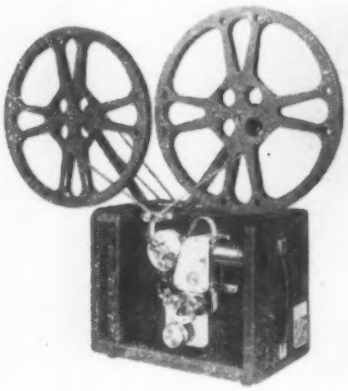


Distances will fool you in Oklahoma, for the clear air makes tomorrow seem today. Trust your groundglass instead of your eyes.

Once a year they keep tribal tradition alive at the Indian fair. You may find the girl who serves your lunch donning white doeskin.

TRADE NOTES AND NEWS

A 16MM SOUND PROJECTOR which weighs only 38 lbs. complete with speaker, the Empire Sound King, is announced at a price of $297.50, and is intended for home



Projector housed in aluminum case.

or institutional use. Among the features claimed for the new unit are 750-watt illumination, coated 2" *f* 1.6 lens, sound and silent speeds, lifetime lubrication, permanent-magnet speaker, accessibility of all lamps and sub-assemblies for removal or repair, and single recessed control panel. Both speaker and projector are housed in gray crackle aluminum cases. Manufacturer is Empire Projector Corp., 60 McLean Ave., Yonkers, N. Y.

AN ADJUSTABLE DOUBLE filmholder for plateback cameras (except the Graphics) has been announced by Arcap Manufacturing Co., 1122 Eastern Parkway, Brooklyn 13, N. Y. The sheath supplied with this holder is two-sided, one side taking 6.5 x 9 cm or 2½ x 3½" film, the other accommodating 2¼ x 3¼" film. Without the sheath, the holder accepts plates in the 2½ x 3½" or 6.5 x 9 cm sizes. The dark-slide has a longer tab than that usually encountered, which extends only half its width, so that either of the two slides may be withdrawn from the holder without danger of pulling both at once. Price of this item is $3.25, plus tax.

THE PRESS KING is a new all-metal 4 x 5 camera which features a 30-degree drop bed, rising, tilting, and swinging front, double bellows extension, revolving back, and positive locks on all moving parts. Priced without lens at $99.50. The Press King can be supplied with Kalart rangefinder and 135mm Wollensak *f* 4.7 lens in Synchromatic Rapax shutter. Exclusive U. S. distributorship is being handled by AFP Distributors, 1803 Empire State Building, New York 1, N. Y.

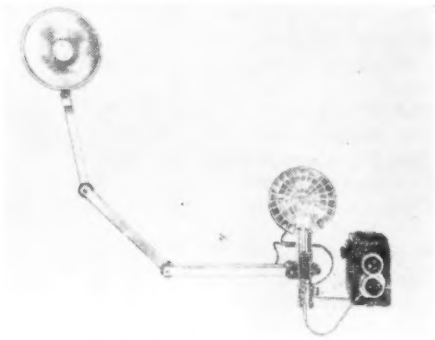
MAGAZINE LOADING, built-in telescopic viewfinder, footage indicator, and an exposure guide on the bottom of the housing are among the features of the Briskin Magazine 8mm movie camera. Single-frame operation and four camera speeds from 16 to 64 frames per second render the camera useful for a variety of filming, and a choice

Built-in telescopic viewfinder on 8 mm camera.

of two coated Wollensak lenses of ½-inch focal length is available. Prices including tax are $99.50 with the *f* 2.5 lens, $122.50 with the *f* 1.9 lens. Further information can be obtained from Briskin Camera Corp., 2103 Colorado Ave., Santa Monica, Calif.

AN INSULATED bracket to eliminate any possibility of short circuits when used with grounded metal cameras is a feature of the latest DeMornay-Budd Flashing Unit for shutters having built-in synchronization. Complete with connecting cord, bracket, and standard reflector, the new model is priced at $19.95 including tax, price with contour-control reflector being $36.00. Further details can be obtained from DeMornay-Budd, Inc., 475 Grand Concourse, New York 51, N. Y.

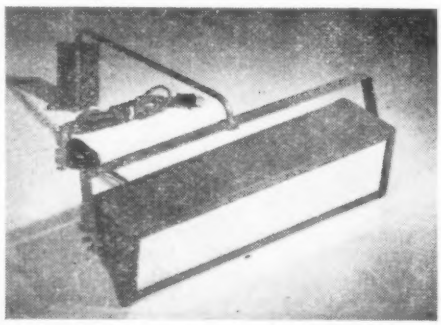
CONSISTING OF A 3-foot flexible arm of lightweight Dural, the Flexible Side Extension announced by Mendelsohn is designed for use in press photography and on other occasions where fast-moving subjects are to be covered with more than one flashbulb, but can be used in general photography as



Lightweight extension with 3-foot arm.

well. The unit clamps onto the Speedgun battery case, and is available in two sizes —one for the Model E Speedgun and one for Models E-2 and E-4. The auxiliary reflector is attached to the arm with a ball and socket joint, permitting the user to direct the light at any desired angle. Further details concerning the Flexible Side Extension can be obtained from the Mendelsohn Speedgun Co., 457 Bloomfield Ave., Bloomfield, N. J.

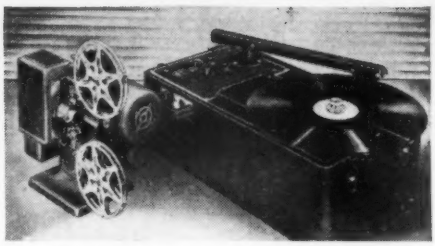
MAXIMUM ADJUSTMENT is afforded in the Minute Man Safelight, just announced by Minute Man Photo Products Co., 309 E.



Safelight can be aimed as desired.

22nd St., New York City. Furnished with bracket and extension arm for wall mounting, the unit also has wing-nuts at each end for holding the lamphousing aimed up or down as desired. Illuminating three ordinary working trays evenly, the light is supplied with an OA filter for printing, other filters being available and inserted or removed through a hinged flap.

TWO SYNCHRONOUS electric motors and an automatic starting device are used to effect sound-on-disk synchronization with ordinary 8mm movie film in the Movie Sound 8, announced recently by Continental Products Corp., 1103 East 15th St., Kansas City 6, Mo. The synchronous projector unit, which can be used alone for showing films without sound, is made by Eastman Kodak Co., and the Wilcox turntable unit can be used as a portable electric phonograph. A series of specially-printed 8mm films for use



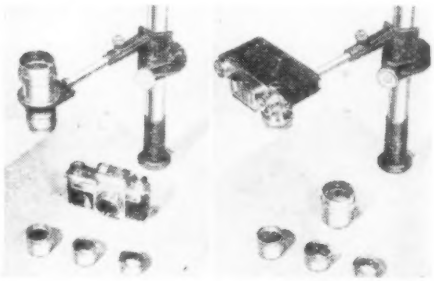
Turntable synchronized for 8 mm sound.

with the unit is being released by Castle Films Division of United World Films, and any 16mm or 35mm sound film can be printed for operation with it, according to the manufacturer. Both the Movie Sound 8, which is priced at $295 plus tax, and the films will be handled through authorized dealers.

READING FROM 2½ FEET to infinity, the Esdy Products Rangefinder has been announced by Camera Specialty Co. of New York City. Supplied with universal mounting clip and shoe, the unit is priced at $8.75.

TWO NEW ITEMS IN the Willoughby line are the Superb All-Metal Paper Chest and the Superb Projection Print Gauge. The former, which lists at $6.75, features a piano hinge and rubber gasket for positive light-proofing, three shelves for 8x10 paper, and two for paper 5 x 7 or smaller in size. The Print Gauge is designed for rapid and economical exposure of test strips, and affords ten clearly-defined steps marked to indicate the correct exposure in seconds. It is priced at $1.10. For further details regarding either item, write to Willoughbys, 110 W. 32nd St., New York 1, N. Y.

STEWARTRY COPYING attachments which replace the camera during focusing and composition are available for Leica, Kardon, and Contax, it is announced. In use a copying arm holds the lens from the camera on an extension tube in position above the copy board, and a focusing screen is placed at exactly the same distance as the film would be in the camera. Focusing com-



Device, left, replaces camera when focusing.

pleted, the camera is substituted for the focusing device, a milled groove in the horizontal arm assuring correct vertical alignment. The copying arm clamps on any enlarger upright, pipe, or bar between 1¼ and 2½" in diameter, and is threaded for use with any camera having a standard tripod socket. Prices including tax are as follows: Copying Arm, $15; Leica-Kardon Copying Attachment, $18.30; Contax Copying Attachment, $28.70. U. S. distribution of this equipment is being handled by Caprod, Ltd., 125 W. 31st St., New York 1, N. Y., Canadian sales being directed by Benograph, 1330 Sherbrooke St., West, Montreal.

A SERIES OF leatherette-covered wooden cases for projectors and cameras has been brought out by Apex Case Inc., 280 Baltic St., Brooklyn, N. Y. The model for Revere projectors is priced at $12.50, one for Excel 8mm projectors sells for $9.50, and other units are available for various Keystone and Kodascope projectors at $11 and $12.50. To hold Speed Graphics and accessory equipment there are the 2¼ x 3¼ size at $10 and the size for 3¼ x 4¼ or 4 x 5 Graphics at $12. Pyroxilin lining and brass hardware are features of the entire line.

ACCOMMODATING LAMPS up to the 300-watt Mazda size, a line of screw-in adjustable hood-shade lighting units with and without louvers is announced by Swivelier Co., Inc., 28 Irving Place, New York 3, N. Y. Said to stay put at any angle, without the use of wing nuts or screws, the reflectors simply are inserted in any house-type electrical socket. Available also with screw-in

WHO'S WHO

News & Comments about Photography and Photographers

Conducted by H. P. SIDEL, director of THE SCHOOL OF MODERN PHOTOGRAPHY

● Damon & Pythias

Two talented SMPers meet . . . find similar interests. Result—a joint shingle after graduation. Such is the familiar story of MILTON

MILTON JAMES
by Somers O. Van Sant

SOMERS O. VAN SANT
by Milton James

JAMES and SOMERS O. VAN SANT *(see above)*. The big league quality of their work is very apparent (*see SMP ad—opposite page*) . . . yet neither had any photographic experience before SMP! Milton hails from Newport, R. I.; Somers from Atlantic City, N. J. A suburban, northern N. J. town will be the setting for their high-type portraiture and commercial photography studio. Good luck, James and Somers!

● Success, Inc.

Checking through the questionnaires sent out to former SMPers is bringing back many a nostalgic moment. So many of you we remember as camera neophytes with a hobby—are making good in a big way! Of the answers already in, the vast majority of you say you are now engaged in professional photography. Replies are coming in from all over—and out of—the country! We'll have more of interest when *all* questionnaires are in . . . so come on, SMPers, mail yours—today!

● Glamour Photographer

That's SMP grad JULES ALEXANDER! An example of Jules' pin-up art may be seen *below* in photo of Thornton model "Kit" Hyde, and in the *SMP ad—(opposite page)*. An SMPer before the war, Jules returned to us as a professional, to brush up on new techniques. Jules' score card already shows some brilliant photo work—in music, in the theatre, and for WARNER BROS. in Hollywood. One of his Kodachromes will soon make the cover of a leading picture magazine. All this—and Jules is just 21! Here at SMP, we're not the least bit surprised. We predicted a bright future for Jules way back when, and you've seen his pix in our former ads! Right now, Jules is entertaining several Hollywood offers . . . so watch for more of his highly-skilled, highly-good-to-look-at shots!

● Panama Panorama

News from Panama City! Back home again after a visit to New York and SMP, ALFONSO QUINTYNE is ready to re-open his studio and store on a bigger and broader scale, specializing in all color processes for portrait and commercial studios in Central and South America. Upon graduating from SMP in '43, Mr. Quintyne embarked upon a varied career. He was photo-lab supervisor for the Army Post Exchange in Panama. Next, he opened his own portraiture studio. Later, he was in complete charge of all Central American processing for ANSCO. Panama City can certainly expect some brilliant work from SMPer Alfonso Quintyne!

NOTES ON THE PICTURE SECTION

PAGE 63

Right of Assembly is the title of the crowd photograph which serves as this month's frontispiece for the Picture section. Art Siegel, now with the Institute of Design in Chicago, made the picture with a 4x5 Speed Graphic. Eastman Type B Pan film, *f* 11, 1/100.

PAGE 64

Firehouse Checkers catches the natural and relaxed atmosphere of a fire station between alarms. Ulric Meisel passed the station nightly on his way home, and one evening finally mustered enough energy to take the picture—later entered in one of this magazine's contests. Meisel used a Rolleiflex, and Ansco Supreme film. Exposure was *f* 8, 1/5 second, using a floodlamp in the hanging fixture.

PAGE 65

An interesting sidelight on Ike Vern's bookstore picture may be found in this month's The Magazines column, page 16. Rather than spoil the story, we'll just list the technical data, and let you look up the rest. The shot was made on an assignment for *Colliers*, with a 4x5 Speed Graphic, Eastman Super XX film, at 1/50, *f* 8.

PAGE 66

Esther Bubley of Standard Oil of New Jersey's photographic unit shot Tommy's Cafe with an Ikoflex. The exposure was 1/100 at *f* 16, on Eastman Super XX. She used two midget flashbulbs, one with a reflector, and mounted above and to the left of the subject, and one on camera, but without a reflector.

Roy Stryker's photographic crew, while in their work for Standard Oil, make many superb documentary shots. Sol Libsohn photographed Mrs. John J. Kratzer, using a Rolleiflex, and Eastman Super XX film. The exposure was *f* 5.6 at 1/100, and is a documentary shot which is valuable from two standpoints—a portrait of a person, and a picture taken in America today, and which perhaps in another fifty years will be part of a rich source of authentic material on our times and our people.

PAGE 67

Bob Freeberg's circus fans were caught at seven o'clock one summer morning, seated on a batch of elephant fodder, watching the "Big Top" go up in an adjoining lot. No matter how early the circus comes to town, there always seems to be an audience to watch the canvas tent go up. Freeberg used a Rolleicord, the film was Ansco Supreme, and the exposure was 1/50 at *f* 11.

PAGE 68

Arthur Haug, one of Chicago's talented professional photographers, has a book titled "Chicago" coming out soon. It's a collection of photographs made in that city, revealing its many moods at many times of day. This picture of Maxwell street is a representative shot, and reveals Haug's ability to unobtrusively record the scenes of a city. Rolleiflex, Eastman Super XX film, *f* 11, 1/50.

PAGE 69

Fritz Henle's pictures showing the people of Paris watching an unseen organ grinder and his monkey are two views taken from the same vantage point. Henle used a Rolleiflex, Ansco Supreme film, *f* 8, 1/50. For some reason, his camera seems to be gifted with a magical quality which seems to invest it with a sort of invisibility. Almost always, although taken at the most intimate of distances, and under the most intimate of circumstances, his pictures present his subjects as though they were completely unaware of the photographer's presence.

PAGE 70

Dr. Selby Kramer's photograph of the stevedores stocking a ship's hold with paper was an entry in one of this magazine's contests. The contrast between black and white is particularly effective. Rolleiflex, Ansco Supreme film, *f* 10 at 1/100—no artificial lighting used.

Another of the Standard Oil photographic crew is Louise Rosskam. She made the picture of the truckers changing a tire on Sixth Avenue in New York near Houston street on a gray day, with Eastman Super XX film. Camera was a Rolleiflex, and the exposure was 1/100 at *f* 5.6.

PAGE 71

One of the few photographers today who can make a portrait without pose is Fritz Henle. His picture of the painter, Robinson, made at Colorado Springs Municipal Art Center is a documentation, and a photograph made with the feeling of a self-portrait by that artist. Rolleiflex, Ansco Supreme film, one flash bulb, *f* 11, 1/50.

PAGE 72

Karl Gullers is a huge young man, standing somewhere near six and a half feet high in stocking feet. His photography has the same stature, not only in his own land, but in this country as well. A collection of his photographs titled "Sweden" is being published this fall in book form, and will be an item well worth having in your photographic library. This picture of the lovers, immobilized in a moment of affection, was made with a Rolleiflex, Eastman Super XX film, *f* 4.5, 1/25.

Between the Acts by Paul Berg is one of a series made at the final dress rehearsal of the St. Louis Municipal Opera just before the gala opening of a recent season. Berg used a 4x5 Speed Graphic and Ansco Superpan Press film. He hung one flashbulb from the ceiling, and fired one on camera, diffused by a handkerchief over the reflector. Exposure was 1/50 at *f* 32.

PAGE 73

Rehearsal Break was made by Paul Berg during the same performance at which he shot the photograph on the facing page. No flash was used, and for this scene Berg switched to a Rolleiflex, using Ansco Superpan Press film. The exposure was *f* 22, 1/50. Berg has achieved a reputation for a peculiar ability in achieving fine dramatic pictures, quite out of the run of the mill material, of scenes such as theatre backstage work, or of show people in general. Recently one of his best pictures, titled Boogie Boy, was hung in the Encyclopedia Britannica exhibition of pictures of the year.

PAGE 74

The Fishermen is another of Karl Gullers' photographic studies of Sweden's life and her people. Gullers' camera is a friend, not a stranger to these scenes, and that is the basis for their breath of life and air of complete reality. Rolleiflex, Ilcord Selo HP3 film, *f* 8, 1/50.

THE SEPTEMBER COVER

California's seasonal fog drifted away for a day, and so Zia Kadri of Los Angeles hiked his Auto Graflex over his shoulder, took Norma Crieger, his model, by the hand, and was off to the beach for the picture that makes this month's cover.

Southern California's beaches are still among the country's best—or as photographer Kadri says, "My model supplied the oomph, Eastman supplied the film, and California the setting, and sunshine."

The photograph was made on 4x5 Kodachrome, the exposure 1/25 at *f* 8, and the lens was an *f* 4.5, 8¼ inch Cooke Aviar.

By MAURICE BORKIN

What are the Ingredients for
SUCCESS IN PHOTOGRAPHY?

1. The recipe for photographic success is intricate —yes . . . but foolproof if correctly followed. For many years, camera-careerists have been mastering this recipe at New York's famed SCHOOL OF MODERN PHOTOGRAPHY. High on the list of success ingredients is *versatility*. At SMP, students are coached in a wide range of subject matter and techniques. Excellent indeed is MAURICE BORKIN'S delectable cake (*left*), but Maurice is equally excellent in many other photo categories. Merely a foto *fan* before SMP, Maurice Borkin is now well qualified to operate his own studio. His choice for a location—New York.

By JESSE PATILLO

2. Skill and Self-Confidence—these important ingredients for success in photography are developed and polished by *top notch* instructors at SMP. That these qualities may be quickly attained is shown by the perfection of MILTON JAMES' attractive child study (*below*) and SOMERS O. VAN SANT'S impressive portrait (*right*). Hard to believe is the fact that a short while ago these talented photo-artists were just amateurs. Now—they are ready to open their own fashionable studio (*see* WHO'S WHO—opposite page). At SMP, talent is quickly discovered and nurtured . . . and SMPers find a world of opportunity awaiting them.

By SOMERS O. VAN SANT

3. Inspiration and Ingenuity. On proper staging—on the ability to improvise—can depend fame or failure. For JESSE PATILLO, taker of the fashion stunner (*above*), success is definitely in prospect! Before the war, Mr. Patillo was a free-lance photographer. Now—well refreshed and ready to go—he plans a N. Y. studio, specializing in portrait photography—and eventually commercial fashion.

By MILTON JAMES

By PRESTON H. REICHARD

4. Technical Perfection—Every facet of photography is thoroughly explored at SMP. Illustrative of the technical excellence achieved is PRESTON H. (HANK) REICHARD'S interesting shot (*right*). An Air Force photographer, Hank joined the Photo Staff of Ohio State after service. Ohio State will soon see him back, specializing in color photography.

By JULES ALEXANDER

5. Sense of Sell—obviously SMPer JULES ALEXANDER has it! Only 21—he already enjoys a bright camera career. Glamour shot of actress Janis Paige (*above*) was taken for WARNER BROS. (See WHO'S WHO—*opposite page*.) Which branches of photography offer the best opportunities and the *know-how* of seeking them out—these answers are very important ingredients of SMP's recipe for photographic success.

6. Information Please! Into this reception room have walked thousands of starry-eyed youngsters and careerists of all ages. Question most often asked: "*What about tuition fees?*" The answer is genuinely surprising, for specialized courses or complete study programs, *either day or evening*, are exceptionally moderate. Visit the School, or write for outline of courses. *Address* H. P. Sidel, *director*, Dept. P9.

(Continued from page 45)

graph, that is next to a cooperative little model, of course.

If you like children, and you wouldn't be trying to take their pictures if you didn't, they'll know it, never fear, and if the whole thing is "an adventure," you are bound to get good pictures after a bit of practice. Take a few "dark slide" shots, in other words. Of course you must know your camera and be able to forget that part and concentrate on your subject. Children are quick to change expressions and often will pass through some wonderful poses that you may have to be on your toes to capture. Take it

In taking these photographs, Lord used a Rolleiflex, usually on a tripod. His average exposure was *f* 8 at 1/100 sec.

fast, and use fast, finegrain film (these shots were made on Eastman Plus-X and Ansco Supreme film). You need not stop down much if your subject and prop are all in one plane, or nearly so.

It is when you shoot from too low, or too high an angle, or when the model has an arm or a leg too far forward, or behind this "flat plane" that you need the smaller stops, and even then you will introduce unwanted distortion if you are not careful. Watch out for "awkward" poses and positions—let your model pass through these and shoot the natural unaffected poses and positions of your subject as they occur.

A white concrete bridge rail, or a wide-board, white fence such as the ranch gate I used in Carole's pictures, works beautifully as a prop. It is a prop literally as well as figuratively, for it literally "props" or holds your model *into* the picture. It gives the cut-away portion of your picture a reason for being cut-away and it gives your model something to lean on at the same time. I used a white bridge abutment on my "Jo," a print that has been accepted in more than 40 salons throughout the world and is still going strong. These props must be of plain and simple construction so as

HERBERT'S Metaleasel FOR ENLARGING

Has post-war improvements . . . at a pre-war price $5.95

Here's an easel that has all the improvements I could think of . . . a marvel of efficiency and wonderfully easy to use. I've even given it my name—I think it's that good. Just look what it's got . . .

- *2 4-way adjustable arms for variable margins*
- *24 S T heavy aluminum base, 1/8" thick*
- *Spring steel marking bands*
- *White focusing surface*
- *1/4" to 1" margins*
- *Takes paper up to, including 11" x 14"*
- *Masking bands open 90 degrees on "piano" hinges*
- *Cadmium-plated brass control knobs*

Herbert's Metaleasel adds up to the best buy in a paper holder I've seen yet . . . for amateurs and professionals. Come in and see it today. Come in if you need *anything* in the photographic line or if you have any problems. I have every imaginable kind of new and personally tested equipment. Or write—I prepay postage on all mail orders.

HENRY HERBERT
Camera and Photo Supplies
485 Fifth Ave., New York 17, N. Y.

Thrills . . . Fun . . . Earn . . .

COLORING PHOTOS AT HOME

Fascinating occupation and hobby learned by average man or woman who is artistically inclined, in spare time at home. Easy-to-understand oil coloring method makes it possible to bring out life-like colors. Many earn while learning.

Easy to Learn . . . Our practical instruction shows you how to do beautiful work. No previous training is needed, nor is it necessary to do any drawing or sketching. Find out how those with natural talent can be trained to color their own photographs and those of their friends and, when experienced, seek work for studios, stores and others.

National Method Means Beautiful Work

Learn the "National Method" of coloring photographs and miniatures in oil. It brings out beautiful effects. Originated in a well-known Studio that for many years catered to the Gold Coast residents of Chicago. This type of instruction trains you in the late, modern method of coloring in vogue today.

FREE Booklet

If you seek increased independence, greater happiness, and a worth-while hobby, and you feel you have artistic talent, write for this FREE booklet. Find out more about this fascinating work and the opportunities in a comparatively uncrowded field. Send today for free booklet, "A Fascinating Hobby" and full particulars. Sent postage prepaid, without obligation.

PLASTIGRAPH CORP.
475 Fifth Avenue, New York 17, N. Y.

not to detract from your center of interest, however.

Take an assistant along *only* if it doesn't bother your little model. The assistant, if you have one, has nothing to do in this type of photography except to hold your model's attention in the direction you like best for proper lighting and pleasing views of your subject's facial features. If your model has any imagination (most children do), you won't even need an assistant. Merely have your model look toward various fixtures of the landscape and try to assume an expression, or pose, as directed by you, towards that fixture. It is fun for the model, if carried out properly, and it will make your picture have that all-essential air of naturalness. This worked beautifully on

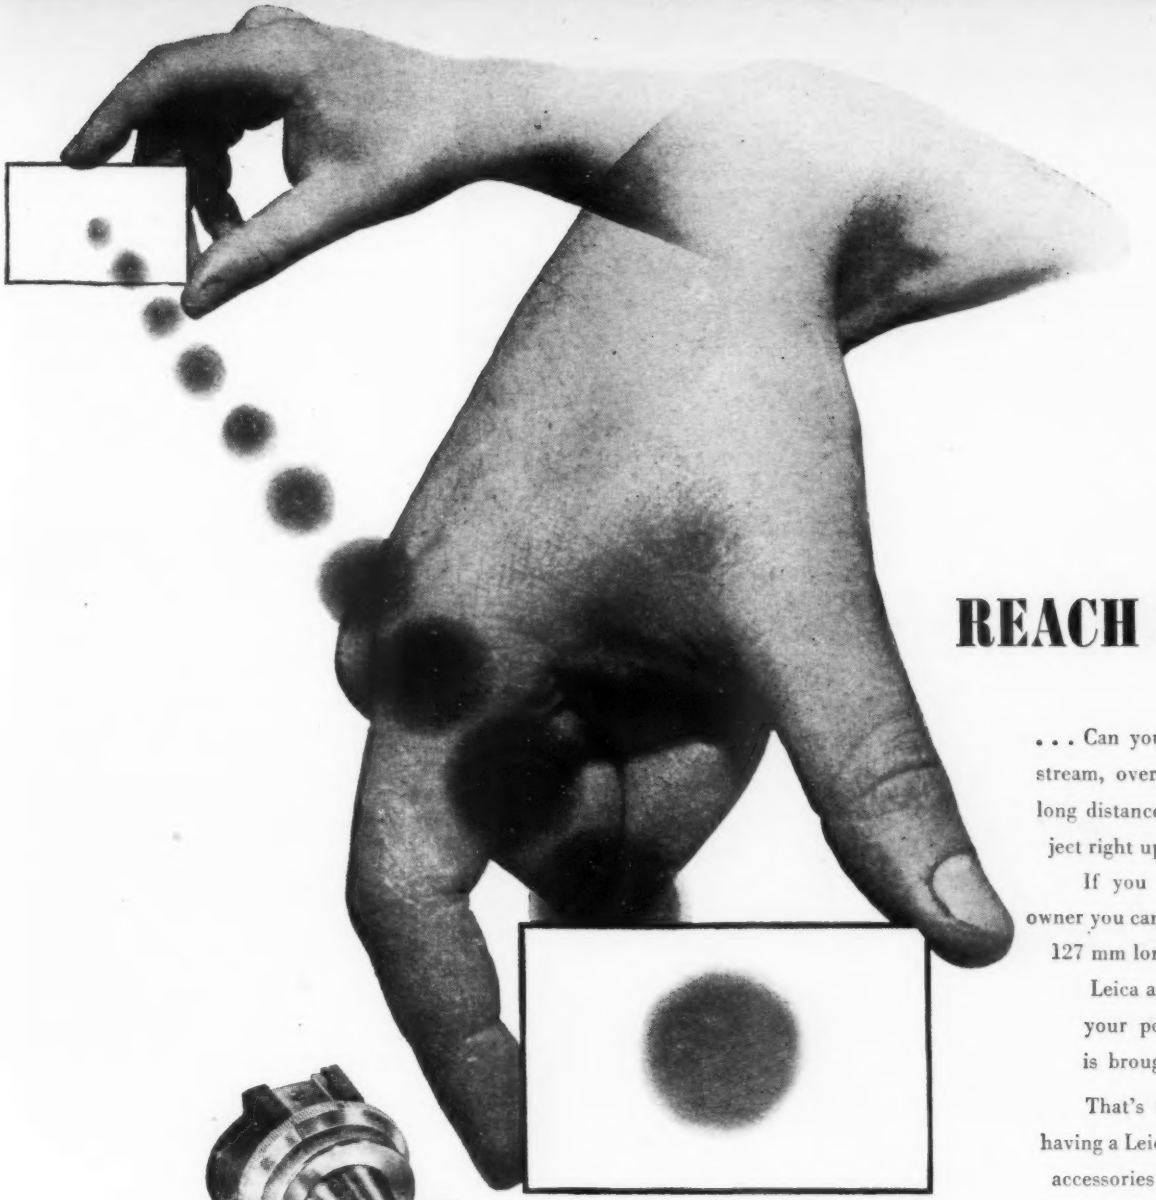
Author-photographer Lord worked with Eastman Plus-X film, and carried a medium yellow (2X) filter on his camera.

Carole and no assistant was needed. All children cannot, or will not react this way to direction, but many will—thanks be.

Briefly, again, this is it: A familiar camera, well handled, fast film, meter readings, fairly level shooting angle, morning or afternoon lighting (avoid that noon sun except for Kodachrome), one simple prop, *blue sky background* (don't forget that yellow filter—I use mine for a dust cover, it is on so constantly), and a cooperative little model who is having fun at the same time you are. Carole did! Result: the pictures you see here.—▶

Popular Photography — Norman J. Devine

DETROIT PUBLIC LIBRARY



REACH OUT

. . . Can you reach out across a stream, over a fence, through a long distance and bring the subject right up to you for close-up?

If you are a Leica* camera owner you can. You put a 90mm or 127 mm long focus lens on your Leica and, without changing your position, your subject is brought up close to you.

That's the big advantage of having a Leica. There are so many accessories available for it, each of which enables you to make "different" pictures. There's the Universal View Finder, the Model VIII Flash Unit, the Sliding Focusing Copying Attachment, the Polarizing Filter, and many other accessories. Each is made with the same high precision and workmanship you expect of Leica products. Visit your Leica dealer. Let him show you the various Leica accessories and the picture-making possibilities they open to you.

Write for free booklet P.P.-6

Interchangeable 127 mm f/4.5 Leica long focus lens. Helical focusing mount couples with the Leica built-in range finder • Image-erecting, left and right correcting Universal View Finder for Leica and other 35 mm cameras. Shows exact picture obtainable with lenses from 35 mm to 135 mm focus.

Leica cameras are available in limited quantities—more are coming. Make your reservation for a Leica camera with your authorized Leica dealer.

Why soak in water for an hour or more when a short dunk in HYP-A-MIN solution can *whisk away hypo in minutes?*

HYP-A-MIN IS SPEEDY!
While ordinary washing takes a full hour, washing time with HYP-A-MIN takes only 5 minutes.

HYP-A-MIN IS SAFE!
Contains no toxic acids; will not stain, injure the skin or your prints. No sludge, residue, unpleasant after effects.

$1 FOR 48 TABLETS

HYP-A-MIN IS CONVENIENT!
Individually sealed in colored cellophane to prevent light deterioration. All you do is tear one tablet off its cellophane sheet, dissolve it in 16 oz. of water, and presto! . . . enough solution to treat six 8 x 10 prints or the equivalent. A complete package makes sufficient solution for treating 700 5 x 7 prints.

HYP-A-MIN IS INEXPENSIVE!
48 tablets cost you only $1.00. Remember it takes only one tablet to make a 16 oz. solution.

The Land of Many Faces

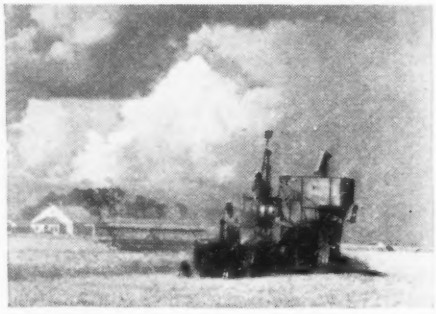
(*Continued from page* 81)

it will be in a state still less than 40 years old—statehood day was November 16, 1907. But with that same odd contrast, it's an ancient country, too.

Photographers can prove it by visiting

Oklahoma is a land where cattle roam, so should you see a couple of "dogies" on the hoof, be sure to get their pictures.

the old missions of nearby Texas and New Mexico, many of them built before, or at the time the pilgrims landed. These mission pictures have hung in hundreds of salons. And don't hesitate to shoot at them while it's raining, for Southwest light will fool you. Rain clouds can be



Farm machinery, framed against rolling fields, a clouded sky, and a farmhouse, will make an album picture worth having.

high. So use your meter, shoot, and be surprised at the texture of the old stone.

If you're coming by air or traveling light, leave the tripod at home. You'll find a fast shutter speed of more value if the wind is blowing. There are good airports, direct airlines; good cross-country highways; and good train schedules. Take your time or take it fast. But stop long enough to say "Howdy," and take a picture.—

PSA CONVENTION CONTEST

In the spirit of true western hospitality, the Oklahoma Camera Club of Oklahoma City has announced that it will award $100 in prize money to the three best pictures made during the Photographic Society of America's convention to be held in that city October 8 to 11. There will be no entry fee, no limitation on subject matter, and unsuccessful prints will even be shipped back to their makers by pre-paid parcel post.

First prize for the competition will be $50, second prize $30, and third prize $20. No entry form will be required, but prints must be submitted on 16x20 mounts. Color transparencies and slides

Announcing new addition to superb Wirgin line of unmatched lenses and cameras

THE NEW Wirgin CAMERA

equipped with the famous Wollensak Coated Velostigmat 4.5 75mm lens and Wollensak shutter—4 speeds plus time and bulb a great value at only $32.50 plus tax

beautifully finished in smart black and chrome!

Shoot your picture right from genuine cowhide sportsman Eveready case. **$5.50**

Over 1,000,000 Wirgin Cameras used by satisfied photo fans!

This is a fine Wirgin camera — superior in design, construction and performance to cameras costing considerably more!

Easy to use. Handy to carry. Takes large, beautiful pictures in most popular 2¼ x 2¼ size. Under any light conditions — indoors or outdoors — you get amazing clear, needle-sharp pictures...perfectly and accurately composed in the practical built-in optical view-finder!

Yes! You get all these unmatched features and the Wollensak shutter has cable release socket, and flash synchronizer attaches easily. See — buy — the ruggedly constructed, streamlined design Wirgin camera now! Now available in limited quantities.

FREE!

Colorful brocure describing Wirgin Cameras, lenses, and photo equipment — interesting and profitable reading for every camera owner and photo fan. There's absolutely no charge or obligation. Write today!

Wirgin TELOR for 8mm or 16mm Cameras $24.50 plus tax
Superb telephoto lens. Doubles size of objects. Same speed as your own camera lens. Easy to use.

PSA Furthers Plans for '47 Convention

Plans for the 1947 Convention and exhibition of the Photographic Society of America are being developed along lines which will permit PSA members to include the American Southwest in their vacation plans and to visit Oklahoma City, Okla., for the October 8-11 period. Arrangements include camera field trips to oil fields, Indian dances and ceremonies, western barbecues, and publishing plants. Convention sessions are being scheduled to free favorable hours for photography.

Convention chairman M. W. Woodbury, of 538 Northwest 34th Street, Oklahoma City, and National Exhibition chairman C. T. Baker, have announced that the 1947 PSA Exhibition of Photography, October 8 through 31 in the Oklahoma Art Center, will present outstanding examples of modern, pictorial, color, nature, technical, journalism, and motion picture photography. Closing dates for all classifications will be September 15, except that entries in the Motion Picture Division will close September 5. Information is available from U. Joseph Brown, chairman, PSA Exhibition Committee, 900 Commerce Exchange Bldg., Oklahoma City 2, Oklahoma.

Fort Dearborn Camera Club, of Chicago, Ill., and Camera Guild of Cleveland, Ohio, are leading the Continental Print Contest of PSA as the result of high scoring in the April competition. Fort Dearborn, winning 75 points in April, now has a score of 292. California Camera Club of San Francisco, is second with 291, and Detroit Camera Club is third with 280. In fourth place, with 272 is the Boston, Mass., Camera Club.

In Group B Camera Guild of Cleveland leads with 264 points. Camera Club of the Engineering Society of Providence, R. I., is second with 255, Seven Hills Camera Club of Cincinnati, Ohio, is third with 238, and Sierra Camera Club, of Clarksburg, Calif., is fourth with 216.

Color slide circuits for camera clubs have been established by the PSA Color Division. Under this plan camera clubs comprise a circuit. Each club enters five slides, and the resulting set of 50 then is routed in turn to the participating clubs for study and criticism.

Three circuits currently are in operation. Among participating camera clubs are those of Toronto, Can.; Buffalo, N. Y.; Minneapolis, Minn.; Ogden and Salt Lake City, Utah; Keokuk, Iowa; Pittsburgh, Pa.; Green Bay, Wis.; Clarksburg, Calif.; Springfield, Mass.; Schenectady, N. Y.; Chicago and Quincy, Ill.; Cleveland and Columbus, Ohio; and Newton, N. J.

Clubs interested in forming color slide circuits may obtain information from W. K. Raxworthy, 2741 South 59th Street, Cicero 50, Ill.

NEW YORK CHICAGO HOLLYWOOD

SHAKESPEARE by Amateurs

By JOHN ALDEN

Photographs by Willow Films

The Three Witches (with yeast paste make-up) prophesy Macbeth's fate. They are, from left: Ann Thompson, Irene Elster, Thomas A. Blair, who also directed.

FEW NON-COMMERCIAL movie groups have turned out such a difficult or such a successful production as the "Macbeth" that was planned, researched, costumed, acted, lighted, filmed, and edited by a group of never-say-die amateurs in the north shore suburbs of Chicago. Orson Welles-ish David Bradley of Winnetka, Illinois, spark-plug and guiding genius of the extensive undertaking, started actual production of the 1606 William Shakespeare tragedy the day he was discharged from the army in April, 1946, but had planned it, done the research, and written the script while still a technical sergeant in Uncle Sam's forces.

At the same time, Charlton Huston of Wilmette (who was in the air corps in the Aleutians) was designing the costumes. Lengthy letters between Bradley and Huston, and Bradley and his other co-workers brought the plans to a head.

Bradley rounded up some GI friends, and on a comparative shoestring fund of $5,000—his own and his friends' war-time savings—they bought 6,000 feet of 16 mm black-and-white film, and began the almost superhuman task of rounding up actors, gathering and making props, finding suitable locales, making costumes, and surmounting the thousand and one obstacles that beset film makers, whether professional or amateur.

Costumes were made by Mrs. Katherine Bradley, David's mother, with the help of actors' crews. Properties such as daggers, swords, and pieces of armor were con-

(*Continued on page* 106)

Macbeth and Banquo, on their return from battle, sight the three weird sisters on the horizon. The sequence was made in a Racine, Wis., stone quarry.

Lady Macbeth (Jain Wilimovsky) persuades Macbeth (David Bradley) to kill King Duncan, who is their house guest. Bradley also master-minded the show.

Daggers (which Macbeth used to kill Duncan) are returned to Duncan's chamber by Lady Macbeth. (Crayon and catsup were used to simulate blood stains.)

Conscience troubles Lady Macbeth in the famous sleep-walking scene. The 3,000-foot 16 mm sound film was made by an unpaid cast of 100 at a cost of $5,000.

Macduff's army leaders advance on Birnam Wood followed by their forces carrying tree branches to depict the famous Birnam Wood-coming-to-Dunsinane scene.

LITTLE STORIES in THREE SCENES

Photographs and text by
JAY A. SMITH

Take your movies out of the ordinary by adding little three-view pepper-uppers

ALL movie fans hear the cry constantly dinned into their ears, "Make your movies interesting! Make them appeal to your audiences!" And very timely this cry is, too. All too many movies are just one scene after another: not particularly interesting, no particular appeal except to the maker.

Interest and appeal are not so fleeting nor so difficult. Continuity adds much value to movies; and continuity can be arranged by preparation of a script of some sort, however sketchy. Editing the movies contributes a lot to interest and appeal, and editing can be done any time, or as frequently as needed to perfect a movie.

One effective way of adding interest to any movie is to add, here and there, little stories that tell of some interesting sidelight or point of minor interest. These little stories may be planned, either before or after the movie is completed, or may be as spontaneous as a summer shower, to be taken on the spur of the moment.

The scenes represented need consist of just three scenes. Three basic scenes! No more, no less! Just three, that's enough to tell any of many, many little interesting stories.

These little stories are nothing more than interesting paragraphs of the whole movie. They can be spliced into the movie wherever interest lags, wherever they contribute to the movie as a whole, or wherever an extra touch is needed to give your movies that finished powerful punch.

Subjects for stories in three scenes are endless; their number depends solely on your own originality. Little stories may be found and photographed at every turn, if you have the eyes to see them.

Now what are some basic themes adaptable to stories in three scenes? Here are a few; others will appear if you look for them, or will appear anyway.

Well, first, you can take the same subject from three different points of view, or with three different interpretations. The interesting view of the chapel becomes a *story* of the chapel if you take a long shot to show the environs, a closeup emphasizing the tower outlined with beautiful clouds, then a medium or long shot showing the chapel framed with graceful trees (see accompanying illustrations). Or the view of the river becomes a *story* of the river if you show the wife and child walking leisurely along the bank, then show as the second scene a quiet view with no apparent movement except the ripples of the water and the majestic wanderings of the clouds. The third scene of the river might be another view of the clouds reflected in the water. Any landscape will mean more to your audience if you show three views, perhaps a long shot, then a medium shot of the most interesting part of the landscape, then a view emphasizing the clouds or the sky or a silhouette against the sky.

If you make a story in three scenes of landscape or architecture, remember that a person or a human figure always adds interest; this figure should be placed (*Continued on page* 134)

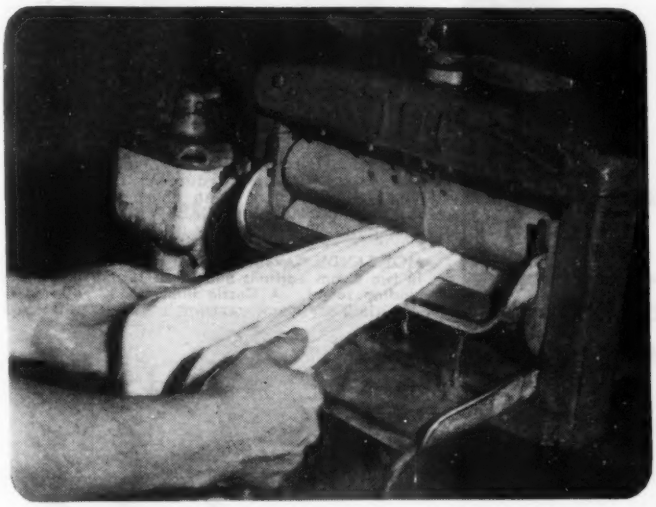
Audience interest in your movies will zoom as you augment their story-telling impact. Here is the story of a dousing—the child of three plays with the hose and wonders what the hole is for.

Washing diapers—rinse 'em up and down at least ten times. Three scenes such as these can be used as a running gag. Show them three times in a film—they'll get progressively funnier.

A picnic easily can be the feature of any movie of the family or of fall activities. Here Daddy helps daughter prepare a wiener for roasting. (He'd better wait for that blaze to burn down!)

Simultaneously, Daddy prepares to water the lawn and, quite innocently, gives the faucet a quick twist. Your audience now anticipates the worst, and they wait expectantly for the climax.

Climax turns out interestingly and happily. Daughter doesn't get squirted in the face, but she does find out what the hole is for, and has a grand time getting wet while playing with the hose.



Wringing diapers calls for a closeup. The effectiveness of the running gag technique usually is enhanced if the action is speeded up each successive time that the gag series is projected.

Hanging 'em out to dry. For a zany effect, do an about-face on the speeding up of the running gag—tilt the camera a bit and run each successive series more slowly. It'll convulse all fathers.

And here she is roasting the wiener all by herself. (The fact that the wiener has sand on one end, ashes on the other, is raw in spots, burned in others, won't detract from its tastiness.)

Yep, it does taste good. Note the expression of mingled ecstasy and ketchup. Such little three-scene sequences will pep up your movies and keep your guests from suggesting a game of cards.

NEW HOME MOVIES

MYRA HESS. 1 reel, 10 minutes, 16 mm sound. British Information Services, New York office, 30 Rockefeller Plaza, New York 20, N. Y.; Chicago office, 360 North Michigan Avenue, Chicago 1, Ill.

Since Dame Myra Hess first appeared on the concert platform in London, 1907, with Sir Thomas Beecham, she has become one of the great British pianists. She acquired new fame as the originator of the popular wartime Lunch-Hour Concerts, held in the National Gallery in London. American audiences recently have enjoyed her first post-war concert tour in this country. In this film, Myra Hess plays the first movement of Beethoven's Sonata in F Minor—the Appassionata Sonata.

* * *

SOUTH OF THE BORDER SONGS. 16 mm sound. Available at photographic dealers. A Castle film.

This movie is Castle's Music Album's new 1947 collection, offering "Pan-Americonga,"

featuring Rita Rio with Allen Baldwin and Theodore. A second number on the reel is "Say Si Si" with Ellen Conner and Herbie Kay's Band. The finale is "Mi Linda Amor" featuring The Velascos and Lucile Angel.

* * *

HOT SANDS. Available from photographic dealers in two 8 mm editions and three 16 mm editions including sound. A Castle film.

This Terrytoon cartoon is based on the Ali

Baba fable in which two honeymooning pups get mixed up in an encounter with the forty thieves in the big treasure cave. While they are rolling in riches, the Ali Baba bandits literally go to the dogs—with mayhem in their hearts—but a brave camel routs them in time.

* * *

INTRODUCTION TO FRACTIONS. 16 mm sound, color. Joseph W. Burke, Audio Visual Consultant, 1133 N. Highland Ave., Hollywood 38, Calif.

This film was designed specifically to meet the requirements of the fifth grade teacher in the modern curriculum. It was produced by Johnson-Hunt Studios with the advice and assistance of teachers, supervisors, and curriculum specialists. It is the first of a series in elementary mathematics. By means of animation of models and examples, taken from the everyday experience of the child, it maintains a high degree of pupil interest, following a single concept of fractional meaning. It is believed that this film and subsequent films of the series will enrich the mathematics curriculum of elementary schools.

* * *

CONEY ISLAND. 1 reel, black-and-white, silent, 16 mm. Rental $2; sale $21. Square Deal Pictures Corporation. Pines Bridge Road, Ossining, New York, N. Y.

Excellent visualization of the famous resort is shown in this movie. The film opens with scenes of the beach and crowds as the pier is approached by boat. During the

disembarking, the crowds, the life guards, boardwalks, and many of the amusement devices are evident. You are reminded that New York City spent millions of dollars to give its people this place for recreation. It also shows persons spoiling the beach for others by making nuisances of themselves, littering the beach, and breaking bottles.

* * *

STAGECOACH. 10 reels, 16 mm sound. Commonwealth Pictures Corporation, 729 Seventh Avenue, New York 19, N. Y.

John Ford's "Stagecoach" unfolds a story of pioneer courage—of the heritage that has

descended to young Americans from men who fought and hewed a nation out of a wilderness. Two women and seven men portray the strange group of passengers thrown together in a solitary stagecoach as it careens and rocks behind six galloping horses across a vast panorama of primitive splendor. Every mile brings the coach and its odd assortment of passengers closer to a waiting band of Apaches, led by Geronimo, fiercest of them all. This frontier drama takes place in the 1880's when Indians still roamed the sagebrush.

* * *

PICTURE PAPER. 2 reels, 20 minutes, 16 mm sound. British Information Services, New York office, 30 Rockefeller Plaza, New York 20, N. Y.; Chicago office, 360 North Michigan Avenue, Chicago 1, Ill.

This is the story of the production of one of England's great picture magazines. The film shows the full-time activity of a reporter on the staff. He meets with the editor, photographers, and other journalists to discuss the material being prepared for the next issue. They plan new angles for new features and as a result of the editorial conference the reporter goes to cover a story on town planning. For a few days he lives in a certain town, talking to the people, finding out what their plans are. He and his photographers collect facts and pictures and build up a feature story. The assignment is not finished until all the stories are laid out and ready to go to press. On the news stands, the completed magazine appeals to an enormous reading public because of the variety of its feature stories.

* * *

A SWISS WATCH. 16 mm sound. Available to interested groups free. Arthur Bauer Company, Inc., 48 West 48th Street, New York 19, N. Y.

With English commentary, these two films from Switzerland deal with watch manufacturing. "A Swiss Watch" deals with the manufacturing, assembling, timing, and adjusting of watches. The other film, "The Balance Wheel," deals with the balance wheel which is the heart of the watch, showing its function and use and how it governs the performance of the watch.

* * *

ATOMIC POWER. 19 minutes, 16 mm sound. Available from local film libraries. The March of Time, Forum edition, 369 Lexington Avenue, New York 17, N. Y.

When on August 6, 1945 the atomic bomb was dropped on Hiroshima, the world at large first became acutely aware of atomic power. However, research and development had begun back in 1905 when Einstein proved on paper that matter can be converted into energy. The film takes you to those early beginnings and unfolds for you the story of atomic power.

* * *

THE NEW FRANCE. 17 minutes, 16 mm sound. The March of Time, Forum edition, 369 Lexington Avenue, New York 17, N. Y.

Trading luxuries for necessities both at home and abroad, France, after the devastation and high cost of the war in Europe, emerges with a shaky political set-up—but with a definite plan for economic reconstruction. This five-year plan, put into operation with the help of United States capital, is a new lease on life for the French economy, but its success depends largely on the government administering it. This film helps us to understand the political problems of France, the necessity for a national planning council, and the indomitable spirit of the French people.

* * *

GIRL ON THE SPOT. 7 reels, 16 mm sound. United World Films, Inc., Rockefeller Center, New York 20, N. Y.

Eleven Gilbert and Sullivan tunes are heard in this murder mystery. The audience is let in on the secret, as the beautiful young singer is falsely suspected, while the real criminal remains undetected until nearly the end of the film. The film features Lois Collier and Jess Barker. Pinafore, Pirates of Penzance, Patience, and The Sorcerer are drawn on for music.

* * *

SCARLET STREET. 11 reels, 16 mm sound. United World Films, Inc., Rockefeller Center, New York 20, N. Y.

Edward G. Robinson, Joan Bennett, and Dan Duryea are starred in this film about

a man driven to the point of murder when he finds himself betrayed in all his dreams by a worthless woman and her worse-than-worthless companion.

* * *

TOMORROW'S MEXICO. 17 minutes, 16 mm sound. The March of Time, Forum edition, 369 Lexington Avenue, New York 17, N. Y.

this film takes you through the throes of Mexico's 36-year social upheaval. In the rapid succession of presidents, none succeeded in helping Mexico's people much until Cardenas took office in 1934. His reform program was a step in the right direction, but although it fostered a new sense of pride and independence, it did little to improve the lot of the poverty-stricken peon. The film shows that as a result of its war production record Mexico is now in the midst of industrial expansion. However, even more important than the economic boom is the Mexicans' determination to throw off the bonds of ignorance and raise the standard of living.

* * *

BECAUSE OF HIM. 9 reels, 16 mm sound. United World Films, Inc., Rockefeller Center, New York 20, N. Y.

A stage-struck waitress cuts many corners to get her chance in a play, where her

acting talents and golden voice justify her stratagems. Deanna Durbin, Charles Laughton, and Helen Broderick are the stars. Never was Durbin's voice heard to better advantage than in "Lovers," "Danny Boy," and Tosti's "Goodbye."

* * *

THE LAST THREE. 5 reels, 44 minutes, 16 mm sound. Post Pictures Corporation, 723 Seventh Avenue, New York 19, N. Y.

This comedy is about the three dictators, Hitler, Mussolini, and Suki Yaki, who go to

a certain tropical country to negotiate a treaty. The Americans also go there and the plot that follows is amusing and entertaining.

* * *

ATOMIC ENERGY. 16 mm sound. Encyclopaedia Britannica Films, Inc., 20 North Wacker Drive, Chicago 6, Illinois.

This film shows by vivid animation the basic fundamentals of atomic energy. It illustrates how hydrogen atoms can, through nuclear synthesis, change to helium with a resultant loss of radiant energy, the source of the sun's energy on earth. It discusses radioactivity and combustion on the atomic level, and shows how neutrons can bombard the uranium nucleus, split it and effect the chain reaction of nuclear fission. The film begins and closes with the Bikini atomic bomb test. Collaborators: Wiliard F. Libby, Ph.D., University of Chicago, and other atomic scientists.

* * *

SQUARE DANCE MEDLEY. 1 reel, 12 minutes, 16 mm sound. Price $25. Official Films, 25 West 45th Street, New York 19, N. Y.

This movie was reviewed in the June, 1947, issue of POPULAR PHOTOGRAPHY, on page 128 where the price was incorrectly listed as $12. The correct price is $25.

* * *

JIU JITSU. 16 mm silent, 100 ft., $3 each; 8 mm 50 ft., $2 each; 360 ft., 16 mm, $10. Also available in projection strip form. M. Stone, Box 171, Canal St. Sta., New York 13, N. Y.

Filmed at the New York Academy of Jiu Jitsu, Henry Rist, holder of the Black Belt, and instructor Gilbert Fenney demonstrate a defense against each of four common attacks; by a puncher, a mugger, a clubber, and a knifer. Through close-ups, and repeated at normal speed and in slow

Thrilling Brilliance

Extra Sharpness

in your pictures with this New Ampro Projector for 2″ x 2″ slides

Amproslide
Model "30-A"

You will be thrilled and delighted with the brilliant clarity of your pictures when you show your slides on this remarkable new Ampro Model "30-A" Projector. Black and whites are crisper, more "contrasty" with *everything* in the picture brought out. Colors are rich, authentic, more sharply defined. One reason for this increased brilliance is the *improved Ampro Condenser Design* that delivers maximum illumination from 300 watt lamp.

Self-Centering Slide Carrier

Another basic Ampro feature that assures you more effective slide projection is this improved self-centering slide carrier. Positions each slide accurately on optical axis. Assures maintenance of hair-line focus, perfect alignment of slides on screen and interchange of Ready-mount and glass slides without refocusing.

Many Other Important Advantages

The new Ampro Slide Projectors offer a host of new features including: "Hair-Line Focus" Lens, with instant fingertip positive focusing; Coated Lens for maximum efficiency; Convenient, quick action tilting;—Condenser Unit easily removable for cleaning—with automatic realignment of optical elements when replaced. Handsome "lift-off" case with projector mounted on base. For full details, specifications and prices—*fill out and mail coupon today!*

Also—New Ampro Model "30-D" Dual Purpose Projector—for Filmstrips and 2″ x 2″ Slides—

Maximum brilliance of illumination for both filmstrips and slides, split-second changeover, simplified threading and operation . . . really *two* projectors in *one.*

motion, the film shows participants making throws move by move. The titles of the individual films in the series are: How to Throw a Puncher, How to Throw a Mugger, How to Throw a Clubber, How to Throw a Knifer.

HOME MOVIE NOTES

Winner of the film contest recently sponsored by the New Institute, school of cinematic arts, is Lida Moser, of New York City, it was announced by Donald Winclair, Director. A term scholarship in Camera and Lighting, taught by Broder J. Petersen, veteran motion picture cameraman, was offered for the best experimental film. Miss Moser's prize-winning entry was a two-reel documentary, in color, on the work of the Greenwich House Child Care Center. The New Institute, 29 Flatbush Ave., Brooklyn, N. Y. offers courses in all phases of motion picture technique.

* * *

Dan J. Rohyans has been appointed director of adult and home education for Encyclopaedia Britannica Films, it is announced by H. R. Lissack, vice-president in charge of sales of the educational motion picture producing company. Lissack also announced a nation-wide soundfilm rental program aimed to provide an additional means of using and evaluating EBF classroom sound motion pictures and to assure better utilization results with professionally created classroom films. Five new film preview libraries in strategically-placed cities will handle the new program.

* * *

The March of Time announces a new 16 mm division. It will begin releasing in 16 mm, regular theatrical releases of special value—the first two of which are: "The American Cop" and "The Problem Drinkers." Although these films will have a certain educational value, they are not to be confused with the regular Forum Edition films, which are March of Time releases edited for general educational use. The "Specials" will be selected on the basis of appeal and usefulness of the film to a specific group, *e.g.*, "The American Cop" as a vocational and community guidance film, or "Problem Drinkers" as a presentation of methods for combating excessive drinking. For further information write to The March of Time Forum Edition, 369 Lexington Avenue, New York 17, N. Y.

* * *

Post Pictures Corporation of 723 Seventh Ave., New York 19, N. Y., offers $50 for the recovery of a print of "Captain Fury," which was stolen by burglars who broke into the premises of Samson's Picture Service, 35 Portland Street, Providence, Rhode Island.

* * *

Miss Aline Neal, grade teacher in the Duling Public School, Jackson, Mississippi, adjudged the nation's outstanding school teacher for 1947 in a country-wide contest conducted by the *Quiz Kids* Radio Program, was the recipient of a new DeVry 16 mm sound projector.

* * *

Young America Slidefilm Library, 18 East 41st Street, New York 17, N. Y., announces the release of the following slidefilms:

"Needs and Purposes of the Charter," 40 frames, for junior-senior high school, $2.50, a series of pictures explaining that without the United Nations the world may find itself embroiled in World War III. Stressing that isolationism is no longer possible, the slidefilm shows that the benefits can only be obtained through worldwide cooperation.

"The Charters Organization," 38 frames, junior-senior high school, $2.50, a series of charts describing the organization of the United Nations and the separate functions of the General Assembly, Security Council, Economic and Social Council, Trusteeship Council, International Court of Justice, and the Secretariat.

* * *

How films and other audio-visual techniques can aid in today's business training programs was stressed at a conference on training and education and industry held recently in New York City under the sponsorship of the New York chapter of the Society for the Advancement of Management and the evening and extension division of the City College School of Business, New York City.

* * *

The long-recognized need for "big theater" presentation of industrial and advertising films has been met in San Francisco with the opening of the new Vogue Business theater at Sacramento and Presidio Avenue. Irving M. Lecin, district manager of San Francisco Theatres, Inc., announced completion of the installation of interchangeable 16 mm and 35 mm film and sound equipment for screening of all types of non-theatrical motion pictures during weekday hours.

Shakespeare by Amateurs

(*Continued from page* 95)

structed of leather, wood, and *papier mache*. The witches' cauldron was a battered copper maple syrup kettle borrowed from an antique shop. Settings were chosen for appropriateness and included an abandoned stone quarry near Racine, Wis., as the witches' scene locale; Holy Hill church outside Milwaukee, Wis., as Macbeth's castle seen from a distance; the

Spearheads are shaped out of wood by Rodney Maynard in basement workshop of the Bradley home. Props and costumes are of the ingenious home-made variety.

parish house of Christ Church in Winnetka, Ill., for some inside scenes; and Christ Church yard for the graveyard scene.

Treks of 100 miles were not unusual for the Macbeth cast of 100; for the larger scenes these jaunts took on the appearance of a caravan of gypsies—since actors put on makeup and costumes *en route*. Food for hungry actors had to be taken along, as well as lights, reflectors, tripods,

Crepe hair is formed into a beard on David Bradley (Macbeth's) face by make-up man-director Thomas A. Blair. At left Jain Wilimovsky studies her lines.

costumes, props, two 16 mm cameras, and a noisy gasoline generator.

Getting actors was a headache for producer Bradley, who took the part of Macbeth at the last minute when a member of his cast dropped the part. "Many other actors also quit when they discovered that it was work and not all fun," Bradley said.

Finally, after three months of organizing, prop searching, and shooting, the film was completed. Bradley did his own editing and cutting—expertly reducing the

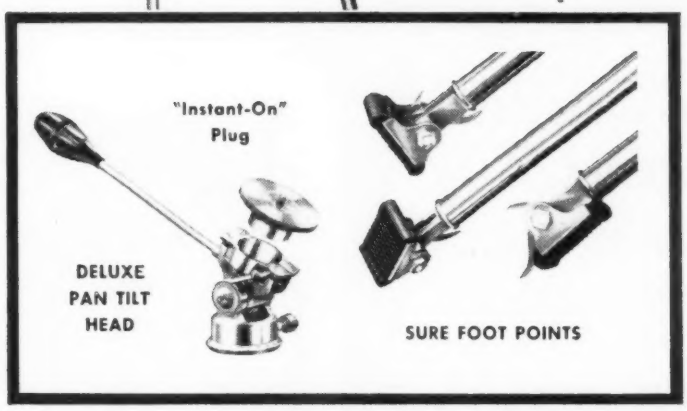
CRAIG THALHAMMER B/L TRIPOD PRICES DRASTICALLY REDUCED

Now only $24.50 with head (tax included)

Here's big news for photographers. The Craig Thalhammer B/L Tripod is now being sold at a new low price of just $24.50 complete with head, tax included—*a saving of more than 37% from the previous purchase price!* This is the same precision-made tripod whose exceptional quality is recognized by photographers the world over.

All the famous Thalhammer features are yours — rigidized two-section legs of hardwood and chromium plated steel — exclusive Sure Foot points which pivot from spur to rubber tread and provide a steady grip on any surface. De luxe Pan Tilt Head calibrated in degrees of rotation—and patented "Instant-On" plug to assure fast, safe mounting and dismounting of your camera.



The new low priced Craig Thalhammer B/L Tripod is today's best tripod value — compare and you'll be convinced. See your photo dealer now. You won't want to miss this opportunity of a lifetime!

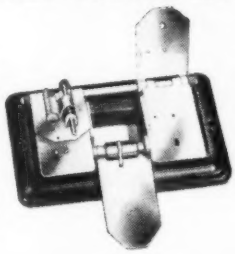
THE SAME HIGH QUALITY —

THE SAME FAMOUS FEATURES!

HERE ARE YOUR BEST BUYS IN SPLICERS TOO!

CRAIG SENIOR SPLICER

You'll like the ease and efficiency with which the Craig Senior Splicer splices 8-mm and 16-mm film. There's no need to wet the film—just insert, trim, dry scrape with the built-in scraper, apply film cement and splice! Handsome chrome plated splicer, solid one-piece cast base with black satin finish. **Only $15.00**



CRAIG JUNIOR SPLICER

Here's complete splicing efficiency in a lower priced model. The Craig Junior Splicer is light, compact and accurate in every detail, adaptable for either 8-mm or 16-mm film.

Complete with scraper, water container and Craig Safety Film Cement mounted on a hardwood base. **Only $4.50**

original 6,000 feet to about 3,000. The sound was dubbed in under the direction of Herman Hadley of Colburn Laboratories in Chicago.

Bradley's ciné techniques are arresting in many ways. Settings are satisfyingly oppressive, costuming is good, some of the acting is mediocre, much of it is good. Particularly effective in establishing the tone of horror are the leprous weird sis-

Acting cameraman Grosvenor Glenn checks a rehearsal of the love scene in Act I by Bradley and Miss Wilimovsky. Setting is a Winnetka, Ill., churchyard.

ters as they brew murder into their cauldron. The film can be forgiven if Birnam Wood doesn't come to Dunsinane in too convincing a manner—Bradley got the cooperation of 35 boys from Allendale School at Lake Villa and the entire drama class of Loyola University—but that gave him precious few actors to play the parts of the 10,000 soldiers which the King of England gave Macduff to storm Macbeth's castle.

However, Louther A. Horne, reviewing the production in the *New York Times*, said, ". . . behind it is a story of artistic

Producer Bradley edits a sound sequence in his library which has been converted into a cutting room. At right is collection of books on film subjects.

determination that war could not stop. It's not Hollywood, of course, but performance and photography are on a high level, and the film is certain to rank as one of the finest produced by amateurs." Fifty prints of the film have been made for distribution to educational institutions throughout the country.

As a result of the enterprising work on Macbeth, Bradley's hobby has become a profession. He is now a director with a large 16 mm concern in New York City which has branch offices throughout the United States.—

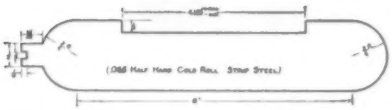
MR. EQUIPMENT Manufacturer

YOU CAN CUT COSTS ON

No matter how limited your die stamping requirements are, you can now get duplicate die-cut parts from any kind of sheet metal or sheet alloy in small lots for the lowest possible price.

The following sketch briefly shows and describes a typical example of producing a limited number of die-cut parts for photographic equipment with our process.



The first 100 pieces shown were made complete including all tooling and delivered to one of our customers for only $15.20, and a fraction of this amount for each subsequent 100 duplicate parts.

All working tolerances are adhered to rigidly, assuring accurate and uniform duplication to comply with photographic requirements throughout each small lot.

Write today for complete information or send your blueprint or samples for prompt quotation by return mail.

Daylight Plus Flash

(*Continued from page* 58)

sun, you say. Okay: ask yourself another. Which throws more light on the subject in front of your camera: the sun, or the flashbulb? You must be able to answer this one accurately if you want to get good flash pictures in daylight.

A simple test will prove to you the amazing fact that the flashbulb you are using, in the usual flash reflector, at the average picture-taking distance (6 to 10 feet) is from 2 to 10 times as bright as the illumination on your subject from average July sunlight. You see, the sun is so far away . . . that is why so many sunlight-flash pictures look as though they were taken at night—because by exposing for the powerful flashbulb the photographer is underexposing the daylight. In order to get a bright, sunny daytime effect with a flash outdoors, *both* the background and the foreground must be correctly exposed. Since the background is illuminated by sunlight and the foreground by flash, these two sources of light must be balanced. Usually, for obvious reasons, it is easier to cut down the amount of flash than it is to increase the amount of sunlight.

What we have to do is ignore the old rule about "expose for the shadows and develop for the highlights." We must follow instead the equally old but more practical rule: expose for the highlights, after illuminating the shadows so they have the right amount of detail. Expose for the sunlight as the main source and use the flash as a fill-in or secondary source.

Let's see how this works out. Indoors you took a picture at 8 feet with a Wabash Press 40 bulb; using medium fast pan film, your correct exposure at 1/200 may have been *f* 16. If you take the picture that way outdoors, the face will get just about the right flash exposure. (The amount of daylight present on the face will make up for the loss of flash illumination due to working in wide-open spaces instead of indoors where walls and ceiling reinforce the flash somewhat). But what about the background? Perhaps the amount of sunlight in the scene is such that the meter advises a diaphragm stop at 1/200, *f* 8. So, if you make your flash shot at 1/200, *f* 16, the background will be two stops underexposed; if you make it at 1/200, *f* 8, the flash-illuminated foreground will be two stops overexposed.

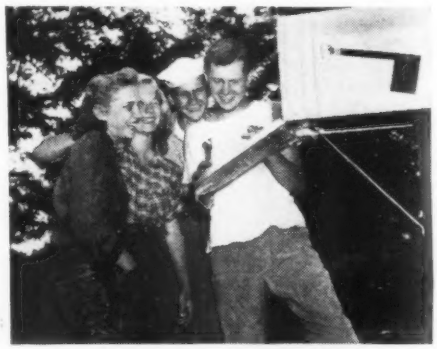
Since the sunlight in the scene is beyond your control, you must expose correctly for it. In this instance, you must set your camera for 1/200 at *f* 8 (or some comparable setting: 1/100 at *f* 11). Since this would cause the flash to overlight the foreground, giving you an unprintable negative, you must decrease the amount of flash illumination. This is easily done in one of three ways:

First, you can change to a smaller flashbulb (a Wabash #0 instead of a Press 40 flashbulb).

Second, you can move the flashbulb farther back (with or without any accompanying change of camera distance).

Third, you can cut down the output of the flash without changing bulb size or distance by covering it with a handkerchief, removing the reflector, or by aiming the flash off to one side.

The actual amount of flash illumination required to fill in the shadows and give you the effect you want can be calculated very accurately. Some writers on the subject have even gone so far as to provide algebraic formulas which, with the proper use of the accompanying tables of data, will enable you to compute the proper exposure to within a tiny fraction of an *f* stop. Unfortunately, sun and subject, like time and tide, wait for no man who accompanies his photography with slide-rule and logarithmic tables. And, fortunately, our photography doesn't have to be that precise. Even in color, which has far less latitude than black and white, you can quickly arrive at a correct flash-and-daylight exposure rating by a simple process which before long should become automatic and intuitive.



Happy-go-lucky youngsters at a summer resort are caught on film by fill-in flash, its controlled light revealing every detail.

First, as already pointed out, the exposure (unless you want special effects, which we will consider later) *must* be based on a correct evaluation, preferably a meter reading, of the general scene or (particularly in the case of strong backlighting) of the highlight areas.

Next, the shadows must get the amount of fill-in we want to give them. That fill-in can range from maximum fill-in (the amount required to balance absolutely with the highlights and give totally flat light) to no fill-in at all. Therein lies the art, the interpretation. Are you shooting color? You want flat lighting, maximum fill-in. Are you shooting a baby picture, or Easter fashions? You want brightness—maximum fill-in. Are you shooting a portrait of a man? You want moderate fill-in, to preserve character. Are you shooting a dramatic or pictorial scene? You can keep the amount of fill-in down to just barely enough to give a feeling of content in the shadow, without letting them go totally black.

All this choice of the degree of shadow illumination is arrived at by exposing for the daylight and using a bigger or a smaller flashbulb, by moving the flash in closer or farther back, by using more or less diffusion over the bulb. But in no case, for the type of picture we are talk-

MIKE WOLK'S COLUMN

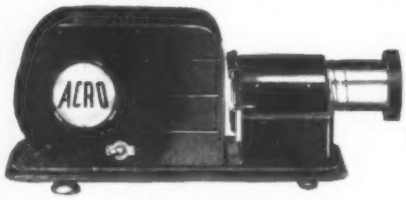
Dear Diary . . .

we're going CRAZY in my store

First it's a guy to buy a new press job, then a guy to trade in a projector, then three gals calling for prints—and in between ten characters who want advice on their photographic problems—they're driving us nuts . . . *and we love it!*

You see, I figure that helping fellow amateurs with their problems is as much a part of my business as selling cameras. So, if you've run up against a toughie, drop me a line. My gang and I will try to work it out for you.

Here's Typical Wolk Value!



ACRO SLIDE PROJECTOR

at less than half price!

ing about, should you allow the amount of flash reaching the subject to be stronger than the daylight reading. To be sure of this the only mathematics you need is your usual indoor flash-exposure calculation. This time, however, you use it in reverse. *Indoors* you might say to yourself, "I want to use a Press 40 on fast pan film at 8 feet, at a speed of 1/100. What *f* stop shall I use?" *Outdoors* you must say to yourself, "My meter tells me I must use *f* 11 at a speed of 1/100. I'm using a Press 40, fast pan film. How far away should the flash be from the subject?" Or you can change that last part to go something like this, "I have to be eight feet from the subject. What size flashbulb should I use?"

The answer to such a question will give you the proper choice of bulbsize and distance to give you maximum shadow detail, which is what—in most cases—you want. If you want less than maximum shadow detail, all you have to do is move the flash farther back, or otherwise cut down the amount of flash illumination.

As a general rule, since most outdoor flash pictures suffer from too much flash, all you need remember is to use a smaller flashbulb (#0 or its equivalent is usually best) and when in doubt, move it farther back or put a handkerchief over it. Too weak a flash fill-in is not as bad as too much. This rule, added to the one about always exposing for the daylight, will assure you correct handling of most outdoor flash situations.

In color photography outdoors, a flash fill-in is more frequently indispensable than for black and white. The procedure is entirely the same, using maximum fill-in. However, instead of the standard (clear) flashbulb that is used for black-and-white film, for color photography outdoors you use daylight color film with the special daylight (blue-coated) flashbulbs made for that purpose. Also, while speeds of 1/100 or 1/200 or even higher are entirely practical in sun-flash combinations on black and white, outdoor color pictures usually should be made at 1/25 or 1/50. This is necessary not only because the film is much slower, but also because the color of the flashbulb varies during its brief duration, and it is best to use as much of the total flash-output as possible. Needless to say, whether shooting black and white or color outdoors with flash, a synchronizer is necessary, the open-flash-close method of working on a tripod with a hand-flash being unreliable where there is bright sunlight.

Once you have mastered the proper technique ("expose-for-daylight") for natural-looking sun-flash pictures, you are ready to attempt (and not until then *should* you attempt) special effects. Now you can try your "expose-for-flash" technique, which was bad when you didn't want night effects, but can be used effectively for pictorial shots if you know when and how to make them.

It may seem inconsistent to go to great lengths to get you away from shooting underexposed backgrounds on outdoor flash pictures, only to say that now at last you can learn how to use them. This

sort of effect, however, should be used sparingly because in most cases it is not natural. An unnatural type of treatment, in art, is disturbing except where the departure from the natural is deliberately and successfully used to achieve a special effect. A normal street scene, carelessly handled ("exposure-for-flash") so that it looks like a night shot, is disturbing because even if the particular activity being photographed is not exclusively a daytime occurrence, we do not ordinarily see people in the foreground, at night, front-illuminated in just the way they are in such flash pictures. Yet we can rid ourselves of distracting backgrounds effectively by using the flash in such a way as to underexpose that background—provided it will go entirely dark, without any distracting highlight areas, and provided also that the background does not occupy too important a space in the picture frame. You can use it to do a successful portrait against a sky; you can't use it on the average general street scene.

To get rid of a distracting background, you must underexpose it. That means exposing for the flashbulb rather than for the daylight and working close enough, or with a large enough flashbulb so that the daylight is definitely underexposed. If the daylight meter reading calls for 1/100 at *f* 11, for example, you must use enough flash illumination so that you can close down your lens to at least *f* 16, preferably *f* 22.

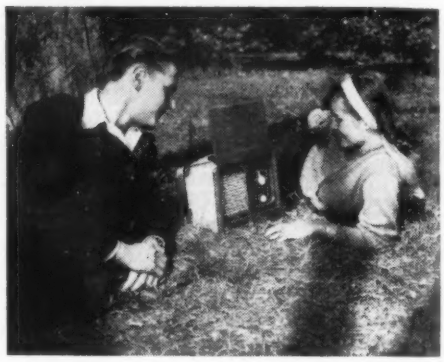
Of course if you don't merely want to get rid of a distracting background, but actually want to make your picture look as if it were taken at night, you need not only proper exposure, but proper lighting. It may no longer be adequate for you to use just one flash at the camera, no matter what the exposure. Even if you limit yourself to one flash it should be anywhere but at the camera. Your main light source should be so placed as to give the illusion of a night-time source of light: a street lamp, a light from a doorway, or a window. The exposure should be based on that light, and that light should of course be strong enough so that the daylight does not register. As in the night effect shot on page 58, you may have to change your camera position so that your background will be fairly dull—in terms of reflectivity. In that particular night effect picture, sun and sky were too bright, and would not have gone dark enough in my exposure for flash alone, so I was forced to use the ground for a background—shooting from a high angle.

In cases where a mainlight should be placed to give an illusion of a night time source of light, you will want another flash at the camera, for some shadow detail, but this should be a smaller bulb, or the same size at a greater distance from the principal subject than the main light source.

This gets us into a technique similar to two- or three-source flash lighting indoors. Properly used outdoors, with large enough bulbs close enough to the subject, so that the daylight does not register, we can get a night-time effect during the daytime, and the advertising photographer can make good use of this technique.

On the other hand it is far more frequently necessary to use the two- or three-source flash lighting outdoors on gray days to get the effect of bright sunlight, as for instance in fashion photography. The usual procedure is to have one main flash high and to one side, to simulate sunlight, with a fill-in flash at the camera, the exposure being based on the "sunlight" (in this case a flashbulb). Usually it also is necessary to use another flash to illuminate the background; this should of course be at the same angle as the main light source, and the background should not be so far back, nor so extensive, as to make the background light inadequate.

Often it is enough, for fashion or similar photography, to use one flash at the camera on gray days, exposing for the



Lifelike pictures with lots of sparkle and depth are the result of using fill-in flash as a supplement to natural sunlight.

weak daylight but using the flash to spark up texture and detail. For even though we get adequate exposure without flash on those soft, hazy days, the light is too diffused to give the brilliance and texture required for advertising, press, or fashion photography. For this brilliance we need the brief, intense flash, balanced against daylight.

It is sometimes necessary or desirable, on the other hand, to shoot a close-up on a bright day against a bank of clouds, perhaps from a low angle so as to frame the figure against the sky. We know that if we expose for the sky we can get the clouds, even without a filter, if the exposure is brief enough. This brief exposure will result in a silhouetted foreground, which may or may not be desirable. If we do not want a silhouette, an exposure short enough for the clouds, with or without a filter, plus a weak flash, will give the desired effect.

Unfortunately this type of picture, incorrectly handled, is the most commonly recognized of the so-called sun-and-flash pictures. So much foreground flash is used ("maximum fill-in") that the lighting is entirely unnatural: a backlighted scene with full front lighting, resulting in faces that seem to glow phosphorescently. A little discretion here (in the form of a handkerchief over the flashbulb) will result in a more subtle and more successful lighting.

For subtlety is the secret of success in outdoor flash photography. As previous-

ly pointed out, if you must err in your lighting balance, it is better to err on the side of not enough fill-in, rather than too much. For correct balance is the secret of good sun-and-flash pictures. The flashbulb is a very important ingredient in the lighting combination, but its importance lies in your ability to control it, to make it furnish just the right amount of shadow detail and no more. In outdoor photography the flashbulb is somewhat like the dash of seasoning that makes a good steak taste better. No good cook ever pours on the whole bottle.—

New BOOKS

GRAPHIC GRAFLEX PHOTOGRAPHY. Eighth Edition. By Willard D. Morgan and Henry M. Lester. Published by Morgan & Lester, publishers, New York. Cloth bound, 7¾x10¼, 456 pages, illustrated, $4.50.

This edition of the perennial best-seller in the photographic world has been completely reset and many new chapters added with hundreds of new illustrations. Some of the new photographic information includes: the new line of Graflex Pacemaker cameras—fully illustrated and described; two new chapters on color photography—including information about Kodachrome, Ektachrome, Ansco Color; a new chapter and illustrations on illumination. Other new chapters include: Portrait Photography, Perspective Control and View Camera Technique, Action Photography, The Syndicates and Metropolitan Press Photography, Publicity Photography, and Photography in Criminology. The editors spent nearly two years in the preparation of this new edition—a book filled with practical, useful information.

KENT STATE SHORT COURSE DIGEST, 1947. Edited by Alfred A. Crowell. Published by Kent State University, School of Journalism, Kent, Ohio. Paper bound, 8½x10, 80 pages, illustrated, $2.

This is a report on the Sixth Annual Session of the Kent State News Photography Short Course. It contains speeches given by leading news photographers and representatives of photographic manufacturers on subject such as jobs, color in newspapers, ethics of news photography, free lancing of pictures, reader interest in pictures, and equipment. It contains 8 pages of pictures.

JOE LOUIS—A Picture Story of his Life, by Neil Scott. Published by Greenberg, Publisher, New York. Paper bound, $1; cloth bound, $2. 5½x7¾, 136 pages, illustrated.

In his foreword to the book, Frank Sinatra says of Joe Louis, "Joe Louis is a living tribute to the democratic ideal."

This is the dramatic, exciting life story of the boy who rapidly rose to be heavyweight king of the fight world. The author, a close friend of Joe's, sees him as a man and a fighter, but he also sees Joe as an unconscious symbol of not only the

The Safe-Lock

The American Products Co.
(Photographic Division)
2287 HOLLERS AVE. NEW YORK 66, N. Y.

Negro race's fight against discrimination, but the fight that millions of men everywhere waged against Nazi racism. Like Joe himself, the author uses few words to tell his story. But from hundreds of photographs, he has put together the amazing career of one of the great fighters of all times. Most of the pictures, of course, are the best action shots of his important fights. But there are many pictures too of Joe's family, of his days in the Army, of his life as a plain American citizen, working, playing, giving of his time and money to worthy causes.

FLASH PHOTOGRAPHY by Gordon Parks. Published by Franklin Watts, Inc., New York. Paper bound, 8¼x11, 95 pages, illustrated, $1.25.

This book tells of the flashbulb's function, characteristics, possibilities, and limitations. Jack Delano, Arnold Eagle, Herbert Gehr, Harold Corsini, Philippe Halsman, Sol Libsohn, Esther Bubley, Bob Ritchie, Barbara Morgan, Edward Rosskam, Kenny Bell, Philip Sperry, John Vachon, and Weegee are among the photographers whose works appear in this book.

PAVLOVA, by Paul Magriel. Published by Henry Holt and Company, New York. Cloth bound, 7½x9½, 78 pages, illustrated, $3.50.

This book is the third in the series on ballet edited by Paul Magriel and published in connection with The Ballet Society, Inc. Anna Pavlova, greatest of the prima ballerinas, has become a treasured memory among ballet enthusiasts old enough to have seen her dance; a tantalizing legend to those who know her dancing only from photographs. The sixty-odd photographs in this volume show Pavlova in all her important roles and in less formal shots as well.

FROM CALIGARI TO HITLER. A psychological history of the German film by Siegfried Kracauer. Published by the Princeton University Press, Princeton, N. J. Cloth bound, 6¼x 9½, 361 pages, illustrated, $3.75.

The author of this provocative book is not concerned with the masterpieces of the German screen merely for their own sake. Through a lively analysis of the technique, the story content, and the evolution of the German film from 1918 to 1933, he uncovers the actual psychological pattern of the people of pre-Hitler Germany. It is Doctor Kracauer's contention that the films of a nation reflect its collective mentality. His study of the course followed by the German film from the days of "Caligari" to "M" and "Madchen in Uniform" and "The Last Will of Dr. Mabuse" is equally an analysis of deep-seated reasons for Hitler's ascendancy. The cinematic triumphs of the great German film-makers—Ernst Lubitsch, Fritz Lang, Carl Mayer, G. W. Pabst—are thus a mine of information for the social historian as well as for the connoisseur of this most modern of art forms.

COMING — AUGUST 22

THE FIRST QUARTERLY ISSUE OF

Photography

● New and exciting in treatment, scope, and content. . . . Quarterly PHOTOGRAPHY has been designed to give the photographic world its most distinguished magazine. Beautifully printed and excitingly presented, the eye appeal of PHOTOGRAPHY will do full justice to the modern advancements in camera art and technique. Look below for an advance glimpse of the provocative, informative editorial content . . . authors and articles in each issue will feature the foremost developments in photography.

● ***FASHION PHOTOGRAPHY TODAY —***

Famous authority Dr. M. F. Agha, examines practices in fashion photography. Illustrated with work of the leading photographers in the field.

● ***THE WORLD AND FRITZ HENLE —***

An appraisal of Fritz Henle's work and extraordinary versatility, and revealing his methods. Includes a selection of famous Henle pictures.

● ***COATED LENSES —***

Fritz Goro, noted authority, explains the benefits from coated lenses, why they work, and shows with a picture sequence the behavior of light rays.

● ***ACTION IN COLOR —***

An important instructional article by the Peskin brothers explaining for the first time how fast motion may be stopped with slow emulsion color film.

● ***CAMERA ON THE FARM —***

Kosti Ruohomaa, specialist in farm photography, tells how to proceed and what to shoot in country photography.

● ***MUST THEY BE SHARP —***

A controversial subject with Philippe Halsman, champion of sharpness in photography, taking the affirmative, and Martin Munkacsi the negative side of the debate. Illustrated with examples.

Press

(*Continued from page* 16)

dent of the group is W. T. Chambers, head of the photographic department of the Huntington Publishing Company in Beckley, West Va.

* * *

SOME valuable pointers for newspaper photographers were given out during the round table discussions at the recent American Press Institute sessions at Columbia University in which 27 picture men from all parts of the country took part. Here are some of them: The photographer should not give any picture job a brushoff. No matter what the assignment he should handle it in his best fashion . . . the photographer always should save one holder aside for that unusual picture he might stumble onto while en route back to his office . . . the photographer should stop worrying about getting exactly the same picture as his opposition. (And a case was cited where a Washington photographer once failed to

INP Soundphoto

A fine action shot of policemen wrestling with a picket during the Allis-Chalmers strike in Milwaukee last winter won Leland Benfer, chief photographer of the Milwaukee Sentinel, first place in the spot news class of the Inland Daily Press Association's seventh annual news picture contest held at Northwestern University. Picture above shows Benfer (left) receiving his award from Floyd G. Arpan, professor of journalism at Northwestern. Photo below shows the shot that won the award. Note how Benfer caught the tense expressions on each of the faces.

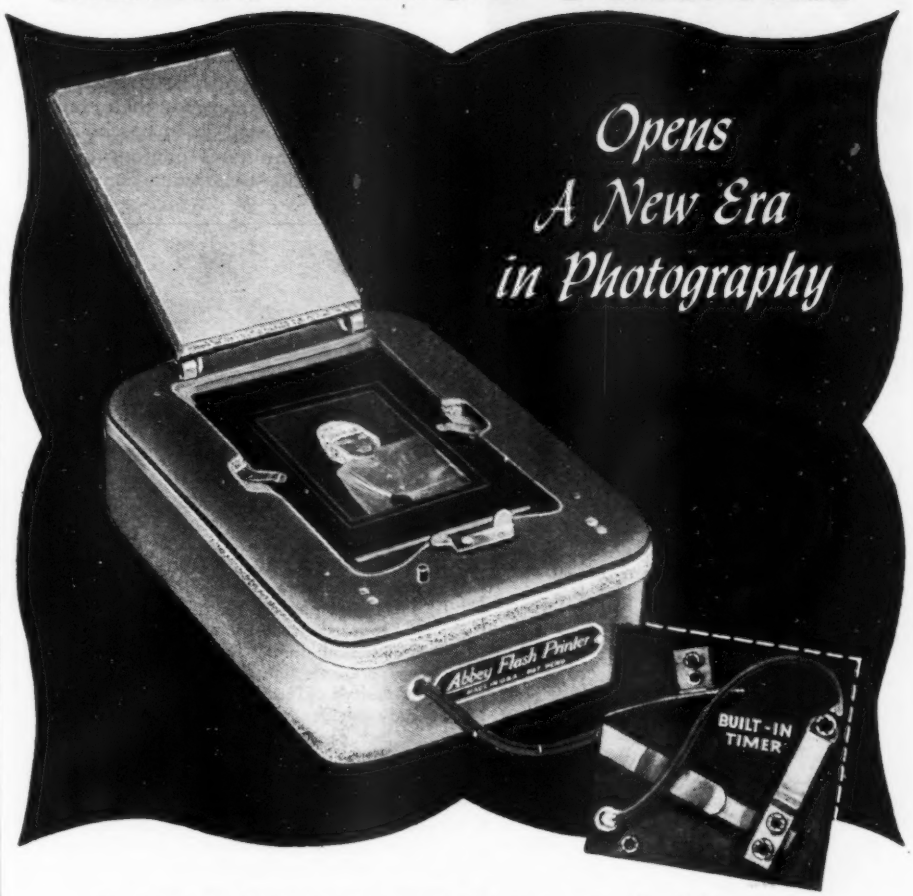
get the usual medal presentation shot, but returned with a different, more unusual picture of the two principals scrambling on the floor for the dropped medal) . . . the news cameraman should have most of these qualities: alertness, good appearance, knowledge of composition, determination, enthusiasm, imagination, ingenuity, initiative, nerve, news sense, patience, personality, salesmanship, speed, cooperation, be full of contacts and be observant, know how to handle people, anticipate pictures, and plan and work under pressure . . . some fine words of advice also were handed out to picture editors: editors should examine each picture minutely. Readers look for tiny details and so should picture editors, with an eye to getting the most out of each picture and each caption, as well as guarding against any material not in good taste. The picture showing what the person looks like, full-face or almost so, is the desired one in introducing a new personality. When the subject is well-known, an unposed picture, as compared with a posed one, has twice the reader appeal . . . encourage amateurs. Remember that one of the 45 million Americans who own cameras may some time come up with a top news picture because of an editor's courtesy and patience.

"Who? Me?" When the selection committee singled out 18-year-old Ruth Tolman of St. Cloud to reign as 1947 Minneapolis Aquatennial queen, Russell Bull, Minneapolis Star photographer, caught the never-to-be-forgotten thrill. Bull's picture recently won first place in the metropolitan feature class at the spring Minnesota Associated Press meeting. Fourteen Minnesota editors selected prize-winning classification pictures from nearly 100 pictures.

* * *

THERE'S nobody in New York who likes the circus better than Doc Skinner, *New York Journal-American* vet cameraman, and when the Big Top hits the Big City, Doc is right there shooting pictures in the sawdust arena in Madison Square Garden. But he had his troubles this year. He made a shot of the chimpanzee on roller skates one night and it turned and chased him. The crowd went wild, and this unscheduled act stopped

ABBEY FLASH PRINTER



Here for the first time is a radically new way of making contact prints . . . so new that thousands have expressed amazement at its accomplishments. Imagine, if you can, an all-metal contact printer with *built-in timer* . . . small enough to carry in a brief case or gadget bag, yet large enough to print post cards . . . a printer that gives you perfect, white borders, yet dispenses entirely with trimming boards . . . that lets you work in an ordinary lighted room with Azo, Velox or Convira contact papers. Guaranteed for life . . . yet costs only $8.80.

Use it in your own or friends' living rooms. Take it with you on trips. Make prints for fun or profit. *They cost less than 1¢ made the Flash Printer way!*

Built-In Timer

Never before has an automatic, electrical timing unit been built into a contact printer! Makes it easy to measure exposures *accurately*. No more guessing. The Flash Printer timer does the measuring for you. A feature not found in any other amateur contact printer! (Pat. Pend.)

Weight 22 ounces. Works on 110v AC or DC, 32½ watts.

Ask your Dealer to put on a Factory Sponsored demonstration. If your dealer does not sell the Abbey Flash Printer, ask him to get it for you, or send direct to Factory.

the show. Now Doc says that after all that applause he's thinking of putting his camera on the shelf and "joining up."

* * *

ENCYCLOPAEDIA BRITANNICA and the University of Missouri School of Journalism have merged their annual news photo contests. Each has held separate contests in news photography for four years. The Britannica contest and the University of Missouri "50-Print Exhibition" will be merged, with 100 outstanding prints to be included in an annual book showing their choice of the best photographs in news, sports, and features.

Marie Kezer, 22, of North Weymouth, Mass., brunette professional model, was acclaimed photogenic queen of the Press Photographers Association of Boston at the annual dinner and ball. Miss Kezer was presented the Loretta Young trophy in behalf of the association by Miss Judy McGrath of Chestnut Hill, winner of last year's contest. The judges were Clarence Finn of the Boston Post, president of the association; Mal Dodson, publicity director for Atlantic City; James Gardner, New York public relations counsel; and Melvin Massucco, picture editor for Hearst interests in Boston.

* * *

WHEN the smallpox deaths broke into the news in New York City recently, a campaign was started to vaccinate all grownups against spread of the disease. Vaccination stations were set up in hospitals and police stations. The first group was a number of girls who were jabbed in the arm by Commissioner of Health Dr. Israel Weinstein. Photographers showed up to record the event, for publication of the shots would stimulate the safety measure drive in a hurry. Then someone popped the question: "Why aren't there any males in the line?" No reason for the lack was given, so one of the photographers, Ray Howard of the *Journal-American,* set his camera down and took up his position in the center of all the gals, his arm raised and his sleeve rolled up. The shot in the arm came, the bulbs from the other cameramen popped, and Ray became the first man in the city to be vaccinated against the germ. Ray's nice gesture saved the day for the city's "stronger" sex.

* * *

THE first picture to be placed in the Kent State University News Photography Hall of Fame at Kent, O., will be "Striker Down," taken by Dominick Ligato, *Philadelphia* (Pa.) *Bulletin* staff photographer. The Hall of Fame will be

With

Personal I-D-CALS

NOW YOU CAN IDENTIFY YOUR EQUIPMENT the way manufacturers do . . . with decal transfers. Personal I-D-Cals are durable decals with name printed in rich gold letters ⅛" high, sandwiched between tissue-thin layers of tough, transparent, lacquer film. They adhere to wood, metal, glass, plastic, leather, and photo emulsions. Simply wet, slide on, and let dry.

ON CAMERAS, CASES, HOLDERS etc., I-D-Cals look professional and protect against loss. They also advertise your business. (**Commercial** and **News** photographers put own name on one side of holders, company name on other side.) Try I-D-Cals on prints for novel signature effects. Set of fifty, name only . . . $2.75. Second line for address (not over 22 letters) . . . $1.50. Three lines . . . $5.00.

•

HOLDER NUMBERS in matching gold, ¼" high. Choice of 1-24, 25-48, 49-72, 73-96. Each set of twenty-four . . . 60c.

established in the school's new student union building. The photograph, selected as the News Picture of 1946 by a poll of press photographers from all over the country, was taken during a melee between police and strikers in Philadelphia.

* * *

A NEWSPAPERMAN who likes to tinker with radios used his hobby to help solve one of the major bottlenecks in journalism—the problem of getting news photos quickly from the scene of the story.

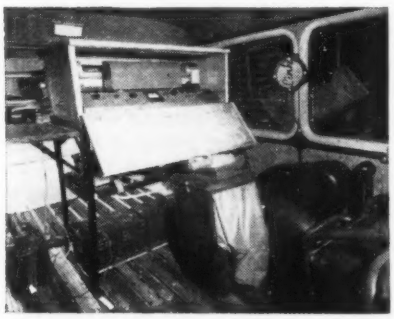
John Reidy, head photographer of the *New York Mirror,* is the experienced newsman who drew on years of spare-time radio work to develop a darkroom-transmitting station that is carried in one of his paper's jeep station wagon assignment cars.

Using his equipment for the first time to cover a spot news assignment, Reidy delivered finished prints in exactly 16

Chief Photographer John Reidy (left) of the New York Mirror and INP engineer Charles Smith prepare to transmit photographs from their mobile darkroom in Central Park to the office 9 miles away.

minutes to his editor, nine miles from City Hall, where photos were taken of ceremonies welcoming Mexico's President Miguel Aleman.

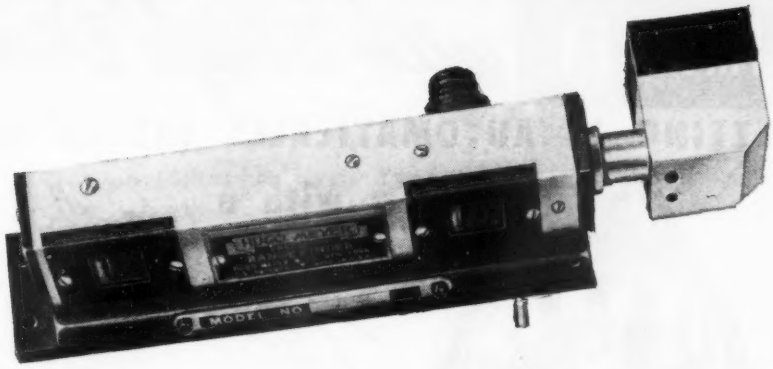
Instead of dispatching undeveloped negatives by motorcycle courier, who would make his way slowly through



Compact unit allows finished print to be put on editor's desk 16 minutes after picture is made. Soundphoto unit is powered by 15-watt transmitter. Two-way radio-telephone keeps points in touch.

heavy traffic, Reidy simply flashed his pictures to the newspaper through a compact Soundphoto unit, operating on an experimental wavelength. All the while, he was in constant communication with his paper through a two-way radio-telephone, regular equipment in the *Mirror's* jeep wagons.

As his apparatus is assembled now, Reidy takes four by five inch film-packs



HUGO MEYER *Cam-Coupled*

PRECISION RANGE FINDER

PRESS MODEL

Preferred by Professionals and News Photographers

Available on all Graphic cameras including

New Crown Graphic New Speed Graphic

Also on

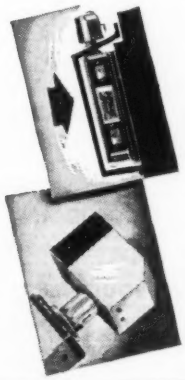
Busch Pressman; Brand; Meridian; B & J; Watson and most other Press-Type Cameras. Also Available for Installation on most foreign film-pack Cameras.

Press Model

$38.50 tax incl.

Installation $3 on most press-type cameras

Specify the Hugo Meyer Cam-Coupled Range Finder on your camera, and enjoy easy, instantaneous, *accurate* focusing. The Hugo Meyer Range Finder has two brilliant squares—one yellow, one white—easy to find, easy to coincide. Because it is specially designed for, and adjusted to, the focal length lens of your camera, the Hugo Meyer coupled Range Finder gives you precise synchronization at every point.



Encircling Bracket Protects Range Finder

The encircling bracket guards the Range Finder and supports the synchronizer and slide attachments without strain on the range finder, eliminates possible distortion of Range Finder Case and resulting synchronization error. **$1.65**

"Focalite" Available for Installation Now

The "Focalite" can be installed on any Hugo Meyer Range Finder—standard or press models. This excellent camera accessory simplifies focusing under the most adverse light conditions by projecting two light beams—one stationary, one movable—through the optical system of the Range Finder onto the object to be photographed. **$15.00** *tax incl.*

POCKET RANGE FINDER. Enables you to get those critically sharp pictures. For use with any camera. Can be held in the hand or attached to your camera. Covers range of from 2½ ft. to infinity. Also available with meter scale. **$12.50** *tax incl.*

HEIGHT ADAPTER, for use on Kodak 35, Monitor, Mercury II, and all cameras where surface obstructions prevent use of range-finder directly on top of camera. **$.50**

Also: 1295 SIXTH AVE. (NEAR RADIO CITY) N. Y.

from his press camera and, using an especially devised darkroom cabinet, has dry negatives in less than two minutes. His 15-watt Soundphoto transmitter, placed in a lead-lined cabinet, needs only five minutes to move an entire negative to the receiver atop the *Mirror* building.

The pictures transmitted were of such high caliber—comparing favorably with standard Soundphoto, Wirephoto, or Telephoto coverage—that the *Mirror* used an entire page of various poses.

* * *

SOME photographers will take the most unusual chances to get that most unusual picture—but if you will follow Leonard D'Attolico's advice, you won't press Dame Fortune too much and too far. D'Attolico, a 26-year-old former Army parachuter, owned a 16 mm motion

Sonnee Gottlieb—INP

Former paratrooper Leonard D'Attolico (with 16 mm movie camera) is stopped by Officer Hugh Matthews after he parachuted from a plane and took movies of New York City while floating to earth. Parachutes and packs are in foreground.

picture camera. By his own admission, he was a "camera bug." He decided he wanted to take a picture which had never been taken before—a shot of Manhattan's Times Square while floating down in a parachute. So he hired a plane and pilot, climbed out onto the wing of the plane while the ship was passing over the Empire State Building, adjusted his camera, and took the leap. He landed in the back yard of a West Side tenement house, and the police came in and arrested him. He was charged with violation of a section of the Sanitary Code which states that "no person shall knowingly, carelessly, or negligently do or contribute to the doing of any act dangerous to life detrimental to the health of any human creature."

* * *

A COURSE in photography will be offered this fall by the Syracuse, N. Y. University School of Journalism. The first semester of the course will develop basic theories; the second semester will be devoted to practice work, including assignments for University publications. The present photographic laboratory, now housed in the basement of the School of Journalism, will be moved into a new prefabricated building. New equipment to be installed will include five enlargers, 12 cameras, and darkroom apparatus.

The Magazines

(*Continued from page 16*)

around with IKE VERN on assignments for *Collier's, Liberty, Holiday,* etc.

Ike is always running short of a model. Once he used Dick as a man buying a $2,000 illuminated manuscript in Boston. (*See picture on pg. 65, this issue*—Ed.) In Oklawaha, Florida, Dick was a card-playing, smoking, drinking local character—in spite of the fact that he does none of the three. Dick's latest personal appearance is in the role of an amateur photographer at the circus. "It's just that I'm a cheap model," he says, modestly.

* * *

MARJORIE COLLINS, back from a two month assignment to Africa which got stretched out to a year, reports on a tiny territory called Ruanda. It sounds like a photographer's paradise.

Between Uganda and the Congo, Ruanda is dry and cool (wonderful for both your complexion and your emulsion), as well as photogenic. It boasts native boys who carry cameras all day for a franc or four cents. Beads aren't any good for bargaining there, but burned-out flashbulbs are better exchange than money. We're thinking of importing some of these chaps as strobe-unit bearers.

On her return, little Marjorie learned that while she was in Egypt, she had almost become a *casus belli*, or at least a *cause celebre*.

J. C. Olson

Dick Tucker, whose photo above shows him a dead-ringer for Bruce Downes, Eastern editor of Popular Photography, has built himself a successful career as a candid photographer of the theater and ballet. A starving architect for seven years, in Hollywood, Paris, and Boston, Dick started taking a Leica with him to theaters in Rome and Paris. Getting hungry one day in 1933, he began to peddle the pix—and soon was hitting *Stage, Vogue,* and *Town and Country.* Dick shoots during actual performances, dislikes setup shots. By now, his bulging files are a gold mine—and this is a good tip to some enterprising book publisher. So far, only the Harvard Library has realized the value of his pictures, and has bought several portfolios of them. [*For a complete article by Richard Tucker on "Stage Shooting" see page 53, March, 1945, Popular Photography.—Ed.*]

She had tried desperately for a week to photograph King Farouk. At last she got

plus value

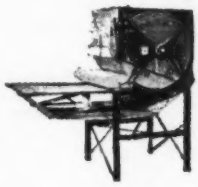
More than a liberal price policy, modern merchandising must include friendly and dependable service, and the guarantee of satisfaction, as well.

Any photographer beyond the casual snap-shot stage will find well worth his while the effort it takes to request our mailings, and to consider such choice offerings as these:

90 mm f6.8 wide-angle Graflex Optar lens assembly—indispensable for the all-around commercial, press and free-lance photographer, and offered only by Sterling-Howard at such precedent-shattering prices! Assembly includes Graphex shutter (to 1/400), Graflex solenoid flash tripper, 4x4 lens board, all brand new, for only $69.50

7" f2.5 Kodak Aero-Ektar lens—ideal for sports, nature study and portraiture, where scarce light requires maximum speed. We've sold dozens—the country's leading photographers endorse them enthusiastically! 4x5 coverage, lens-coated, click stops, aerial-photo sharpness. Government cost over $250. Our price, used and in excellent condition, only $59.50
Same lens brand new 79.50
4x4 metal lens board, threaded for above lenses 3.95

20" f5.6 Bausch & Lomb Telephoto lens—real long-shots without special camera rigs on 4x5 Speed Graphics! Latest syndicated sports photography features pictures made with these lenses. Swell for nature study and portraiture, too. Needle sharp, good coverage—made for 5x7 aerial cameras, cost was over $400; our price, used and in first-class shape, only $119.50
4x4 metal lens board, threaded for above lens 3.95
4" metal extension tube, for close work (under 18') with 14" bellows 9.75



Pako Liberty electric dryer—no toy, but real production equipment for the modern studio. Save half the usual cost! 1/20 HP DC motors. 26" cane-padded stitched-canvas belt, handles up to 300 8x10 prints per hour. Don't let this unusual value pass you by! Brand new, only $165.00

8x10 Simmon Omega Professional enlarger (type NF)—the finest of its class! Typical Omega heavy, angled, truss-braced construction, on a caster mounted base. Auxiliary waist-high table for easel support. Roller-bearing slides heavily counter-weighted. Universal-jointed bellows crank. Even, fast printing, cold-light fluorescent enlarging head. Special f6.3 enlarging lens included. Many, many more features. True "plus value," worth over $900. A beautiful bargain, brand new, only $465.00

9x10 Abrams A-6 Argon-lite printer—extreme light-dodging control with 20 independent toggle switches regulating the cold-light argon blue lamps, with master micro-switch in platen lock for print exposure. White light on separate switch for viewing and flash exposure. Orange-red neon safe-lamps. Ball-swivel mounting for even platen pressure. Ground-glass diffuser below heavy clear-glass print surface. This handsome compact printer cost the Army $237; you can add it to your darkroom, brand new, for only $49.50

All merchandise listed subject to prior sale.

an appointment to see and photograph Sidki Pasha, who promised to line up the King. So Marjorie cabled this success to her agent: "Shooting Prime Minister tomorrow; King pending."

* * *

MORRIS GORDON tells on the meanest photographer we've heard of yet. This bird roosts in night clubs and makes a habit of getting chummy with the girls who flash those terrible "candids" of the customers. While fingering their cameras, this fellow winds up the back curtain shutters on their Graphics—and then gloats as the mystified gals keep coming back frantically for retakes.

* * *

Fifty cent "Portraits" by PHILIPPE HALSMAN, VICTOR KEPPLER, JOHN RAWLINGS, MARTIN MUNKACSI and other high-priced "artistes," were featured at the magazine photographers' party in SARRA's New York studio.

One of Sarra's old "Men of Distinction" sets was gagged up for the purpose. The camera used was an ancient tintype box synchronized with strobe lights at 1/5000 second.

Mastermind of this great development in photographic art was DAVID B. EISENDRATH, JR., head of the technical committee of the ASMP. He prepared for it by figuring out the Weston rating of tintype film for the first time in history—it came out to .07!

ALLAN GOULD was barker for the event, while cooperative sitters included picture editors, stage and entertainment folk, and about 100 photographers who normally collect fat fees for being on the other side of the lens. The ASMP planned the party for about 200 guests—and wound up with 450. The poor devils who got the assignment to cover it: JAMES HANSEN of *Look*, a man from *P.M.*, John Hugelmeyer for the new *Photography*, and Phil Schultz, who was shooting a movie for the Tex McCrary and Jinx Falkenberg television show—had to operate under the noses of 446 kibitzers—all of them professionals. WEEGEE, at home in New York crowds, added footage to his Big City movie, manipulating his Bolex, his exposure meter, and his cigar, like a Coney Island juggler.

* * *

As a sidelight on the ASMP party, we present the case of poor SAM VANDIVERT. Sam got his toughest assignment to date: to bring in one of those umbrella-covered hot dog and lemonade pushcarts, complete with vendor, to serve the guests. He started interviewing on Third Avenue and worked out an approach. He'd buy a hot dog and lemonade, and work subtly around to suggesting that the proprietor bring his dog wagon to the party.

The first one apologized, told Sam he was allergic to cameras and gave Sam a hot dog and lemonade gratis. The next one was independent—he could make more money on the street. "But no hard feelings," he said. "Have a hot dog and a lemonade on the house."

Shifting to Second Avenue, Sam made the usual approach, forced down the routine course, and, loosening his belt, painted a glamorous picture of the ASMP party as a market for hot dogs. Wide eyed, the merchant pressed him for de-

tails. Sam lyrically described the virile photographers and luscious models, all of whom would be starving for hot dogs.

Regretfully, the hot dog man shook his head; he'd love to come; he loved parties—but his wife wouldn't let him stay out nights. "But I appreciate the invitation," said the man. "Please, do me the honor of having a hot dog and a glass of lemonade—on me."

After a whole afternoon of this, Sam staggered back to report his failure to the party chairman.

"Sam," said the chairman, "that leaves us in a hole. . . ."

Anyhow, that night Sam Vandivert wore a big white apron, stood over a hot grill, and cooked 500 frankfurters, every one of which he regarded as a personal enemy.

LOOK photo by Earl Theisen

A busy trader on the floor of the Los Angeles stock exchange, Sprague Talbott prepared for a blessed event about ten years ago by getting himself a movie camera. Before he'd had a chance to shoot it, someone heard that he was a photographer and asked him to do a job shooting some leg-art for publicity stills . . . and Sprague was a professional still photographer before the baby was even born. Since then, he's been a busy boy filling up several pages of each issue of *Look* magazine with color, fashions, and what-not. The old movie camera is gathering dust . . .

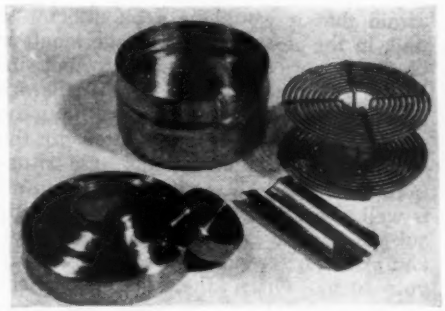
* * *

Progress footnotes—the photographic profession continues to advance in all sorts of little ways. For example, the forthcoming "Who's Who in the East" will probably list more photographers than ever. At least three working cameramen we know will be included are JOSEPH BREITENBACH, for his pictures of odors and development of color processes, and MORRIS GORDON and DAVID EISENDRATH for their pioneer work with speedlights.

* * *

Wrong cover girl. ROBERT CAPA'S autobiographical book, "Slightly Out of Focus," will be out shortly. It features his terrific war experiences, but with a lighter thread of his romance with an English girl, "Pinky," running through the book. The jacket shows Capa in the arms of a girl who is supposedly Pinky—at least Bob and the publishers thought so, until Pinky saw the picture. Then Bob remembered that is wasn't Pinky but some girl in Italy.—

11 *reasons why* 100,000 NIKOR TANKS *are now in use*



Nikor No. 35 develops 5 ft. 35 mm roll in only 8 oz. solution.

Easy Loading—Films slide smoothly and without effort into the stainless steel reels, which on all post-war models have a brilliant electro-chemical polish. Scratches and abrasions are almost impossible.

Quick Daylight Filling—The absolutely light-tight black stainless steel baffle of Nikor roll film tanks lets solutions pour freely in and out, in an average of six seconds.

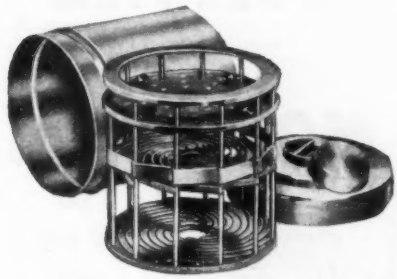
Free Circulation—The open center and continuous spacing of the spirals, both exclusive with Nikor reels, allows solution to flow freely and uniformly over the film, resulting in even and perfect development.

Thorough Washing—Films are completely freed from hypo in 7 to 10 minutes by running fast stream of water into open center of reels.

Uniform Agitation—When loaded, Nikor tanks are leak-proof, and permit any degree of manual agitation, preventing uneven processing which results from settling of concentrated developer, or over-development of outer spirals caused by merely rotating the reel.

Chemically Clean—The hard, polished stainless steel stays bright and clean. Old chemicals cannot collect in the tank or adhere to the smooth surfaces to fog films by contaminating subsequent solutions.

Rapid Drying—Successive films may be processed in the same Nikor tank without delay, by drying the tank by artificial heat.



Nikor cut film Model for negatives from 2¼x3¼" to 4x5".

Temperature Control—Uniform internal temperature can be maintained easily and accurately by placing the all-metal Nikor tank in a pan of water which is readily maintained at desired temperature.

Economy of Chemicals—Small and compact, only a minimum quantity of developer is required; yet no serious change in temperature occurs during development, as in odd shaped containers.

Long Lasting—Nikor tanks will last a lifetime. Their ability to stand hard usage rates highly with press photographers, explorers, and military services, as well as amateurs.

Ideal for Color—Impervious to all chemicals used. With sufficient light, film can be flashed without removing from reel; or flashed off of reel, and then easily rewound.

Nikor models are available at dealers everywhere, priced from $7.25, tax included

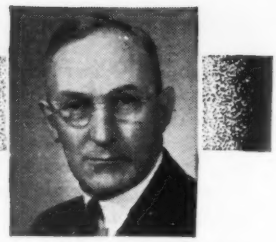
WARD PEASE DISCUSSES



Adventures in Photography

ONE ordinarily associates adventure with arduous personal deeds of daring—something thrilling, something to tell your grandchildren about. I am afraid that it would be a bit difficult to find, in the story of the average amateur photographer of today, much that involves great personal risks. Thrills are another matter, and I have in mind the type of thrill which is related to the wholly photographic aspects of a situation. They can be experienced when all is well, conditions are right, photographic subject matter is found on every hand, and you can see pictures whichever way you turn. Often these circumstances come as the result of well laid plans which are working out nicely. When things go that way there is an inner satisfaction which can lift you "out of this world," and you feel sure that you have found the photographer's "happy hunting ground." You have that feeling that no matter what you point your camera at, you have created a masterpiece—you cannot miss. When you get the prints made, they may or may not be as marvelous as you thought they were going to be. That is beside the point. What counts most is the feeling that you had at the time and the memories that stay with you. If you have pictures to refresh that memory, so much the better.

I have the good fortune to have several such memories. I hope that I can tell of some of them in such a way that you will be able to enjoy them with me. Have you ever lain on your back on a hilltop looking up at the towering, miles-high castles of cumulus clouds on a summer day and wondered what it would be like to be up among them? It was my good fortune to be among them an hour or two. It was on a non-stop flight east several years ago. We were at 11,000 feet near Cleveland when we first met these clouds. They towered miles above us; one instant we were in the midst of a cloud, the next crossing a canyon of clouds of tremendous depth and distance. It was almost too absorbing to permit any attention to the camera, but more or less subconsciously, a good number of exposures were made. Most of them are rather disappointing as they fail to convey the impression of the immensity of the space involved. One appeared to have possibilities and, with the aid of some manipulation on the negative to bring out some missing emphasis, "The Stratospectre" was created—a print which has had some success in salons.

On another flight, we were returning from the east via Buffalo and Niagara Falls. Conditions were favorable to making the trip in less than scheduled time, so the pilot spent a little more time than usual over the Falls, giving us three circles around them at moderate altitude. I had the rear seat, well clear of the wing on the side toward the best view, and was able to make the most of the situation. The resulting pictures are not quite the kind that would go well in a salon, but they go well in refreshing my memory of a real photographic thrill.

I once had a chance while east to spend a short time at Nantucket, Mass. I arrived at the island after dark in the evening, and my boat was scheduled to leave early the following afternoon. When I awoke the next morning, the fog horns

"The Stratospectre" was made from a plane at 11,000 feet—one of the times when photography provided a real thrill.

were blowing, and the fog was so thick that visibility was limited to a hundred yards or so. Nevertheless, I started out to see what I could of the town which is so noted for the beauty of its early nineteenth century architecture. I took pictures—that is, I exposed film, but the light was not right for that sort of thing. How could it be under the circumstances, when it was completely without direction and there were no shadows? It finally dawned on me that in a fog the thing to do was to make fog pictures, and that the place to make fog pictures was down at the waterfront among the boats. The only shot worth while was made there. I got quite a kick out of it several months later when another member of my camera club brought around a shot made from within a few feet of the spot where I had stood! I found out also that he had been there within a few weeks of the time I was on the island. Naturally we had to swap prints. The other pictures made in the fog are not worth showing to anyone else, but they help to recreate for me the thrill of being in the presence of so much opportunity. I hope to get back

there some day when the fog horns are not blowing.

There have been other spots where I have been able to return after a long absence or a long period when picture making was impossible, and the return lived up to expectations in every respect and the long anticipated thrills were fully realized. A spot too far up in vacation land for war-time gas allowances remained unvisited for five years while dreams and plans built up to something which would seem impossible to achieve. Last summer's vacation allowed a few precious hours for the realization of the dream. The consumption of film was terrific, but only one film has been carried through to the finished result so far, and it has been successful. Even without this success, the memory of the thrill would be enough.

These things can happen much nearer home as well. I can recall at least four instances in my favorite winter hunting grounds when everything was just right. The snow was fresh and clean and deep enough, the ice formations were just right, the creek was breaking through as I had hoped it would be, the light was good, and all was right with the world. And on such occasions, who cares whether the results are good enough for the salons. The thrill of working under such conditions should be enough for anyone, yet it is surprising what dividends accrue in the way of successful prints when such happy circumstances guide the creative efforts.

In today's world of high adventure, these experiences look rather tame. Such things are relative. Adventures with a camera do appear tame in comparison with some that I can remember going through. On the other hand, they would seem quite riotous to one who is accustomed to taking his thrills over a chess board. However, they were real adventures in photography, and they prove that much satisfaction and pleasure can be gained in the taking of pictures even if the end results in the form of prints may at times be disappointing.—

SOCIETY FOR VISUAL EDUCATION, INC.
A Business Corporation
100 EAST OHIO STREET, CHICAGO 11, ILL.

"Wait a Minute, Mr. Downes!"

By Eric Bender

RUBBING his hands and flexing his muscles, Bruce Downes ("Let's Talk Photography," POPULAR PHOTOGRAPHY, June, 1947, page 138) prepares to dance on the grave of black-and-white photography before the corpse is even at the undertaker's. "Color photography has its whole future before it," he says, "whereas black and white is probably at the end of its cycle."

True enough, perhaps, for the amateur who makes photographs for the sake of hanging them on the wall and gazing at them reverently with his hat off. But let's move over into the field of business, where a photograph is a salable commodity. As such, it has not only to pull its own weight, but must conform to printing processes.

I'm talking now as a textbook publisher. If a photographer offers me a color transparency as a book illustration, he can talk all night about the emotional impact of color and the reality it imparts to a picture. At the end, he will still butt his head against the solid fact that maybe I can't afford to illustrate a book in color.

We buy thousands of photographs for various purposes; so do hundreds of other book and magazine publishers. But unless something revolutionary happens in engraving and printing processes, which isn't at all likely, we are going to need good black and whites for a long time to come—a lo-o-o-o-ng time.

The same thing applies to newspapers, advertising printers, and everyone else who deals with printing processes. We're all just as much interested in color as Downes. We'd like to use it more, and we cheer lustily for each forward step made in color processing. But as long as improvement results only in a better picture to hang on the wall, there's nothing we can do about using it. If there were as much progress in printing processes as there is in color photography processes, we would be tempted to dance on the grave of black and white along with Downes. But there isn't.

This is all by way of saying that if anyone is interested in making photographs *to sell*, he'd better not throw away his black-and-white equipment just yet.

The obvious rebuttal from color-happy photographers is this: "Spend the money necessary to illustrate in color and you'll sell so many more books that it will pay."

Wait a minute. The law of diminishing returns hasn't yet been repealed. A specialized book has a sharply limited market that you couldn't increase even if you printed it in gold leaf. There are just so many buyers for a certain book, and they have just so much money to spend. All this is true of most printed matter.

Here's something else about color as compared to black and white. What many amateur photographers do not realize is that there is a mile-wide difference between a picture to look at for its beauty and interest, and a picture that has to do

a certain specific job. In our business we are concerned, in the main, with pictures that explain or demonstrate or visualize something; pictures that tell a specific story, even though the subject isn't always very entertaining. Very often we use a photograph that doesn't have much in the way of composition, angle of view, interesting light and shadow, but it does show what we want shown. We'd rather have a photograph that has artistic merit—but try to get it! The amateur photographer makes pictures of beautiful women cuddling water lilies, or of cocker spaniels making wistful with the eyes, when what we need is a picture of a man in dirty overalls scratching scale off a casting, maybe, or a picture of somebody paying his taxes down at the court house.

The commercial picture suppliers offer plenty of prints, but the subject matter is often too general for our use. You can't blame them. They've got to supply pictures that will appeal to other users besides ourselves. But commercial photographers too, when they want to show a housewife at the sink, or a lady welder, tend to use a twenty-year-old model of the practically edible type, with every curl in place and a $15 makeup job.

Well, with that much of our requirements sketched in, I want to say this about color. I think that color, in a picture with a job to do, often can be a drawback rather than a help. Of course I am not speaking about situations in which the picture is *about* color, such as in the study of birds or the identification of flowers. I want to say that in a great many pictures, color makes an emotional impact that gets in the way of clear thinking and even of clear seeing. The best way to teach certain things with pictures is to eliminate all distracting influences and concentrate on the essence of the situation. Color can be a distraction.

I will grant you anything you want to say about color enhancing the *reality* of a picture, not to mention the esthetic effect. But as far as teaching is concerned, reality can get in the way. If you're teaching how to wire a house for electricity, the *realest* way would be to turn students loose in a wired house. But the better way would be to have them work with a small-scale model of a wired house, where they can see what goes on in one eyeful rather than a hundred eyefuls. Or, a toy grocery store in a classroom is infinitely more instructive than twenty visits to a real store.

Same thing with pictures—not always, but often. Take away whatever is distracting about reality—color, maybe—and students will then see what you want them to see.

I will freely concede that black and white can't do everything that color can, but neither can color do everything black and white can. If you want to argue that, I will want you to tell me why such monochrome media as etchings have held an eminent place in art for so many centuries.

Let's not get oversold on black and white, or on color either. Color, or its absence, is not the only criterion by which to judge either the beauty or the usefulness of a photograph.—

Little Stories in Three Scenes

(*Continued from page* 96)

to one side of the center, and, if walking, should walk away from the camera into the scene, and toward the center of the scene if that is possible. Remember also that a distant view looks deeper and better if there is something in the foreground. A limb of a tree (which may be there by nature or placed there for the photograph by yourself), a person sitting on a stone bench or leaning against a tree, or a part of a building and archway, will serve excellently. Some photographers carry props for this purpose: usually you will be able to improvise on the spot very successfully.

A second theme adaptable to a story in three scenes is the introduction—development—climax theme. The introduction tells what the story is going to be about, the development leads the viewer to expect a certain action, and the climax is the action itself, usually a humorous disaster. For instance, if the whole movie is about the family or about the child of three, a little story in three scenes might be about the garden hose.

In the introduction, the little girl picks up the hose and peers intently into the nozzle as if to ask, "What's this for?" In the development, Father, innocently, goes to turn on the water to sprinkle the lawn; this leads the audience to anticipate a dousing. And sure enough, in the climax, the water spurts from the hose, converting the well dressed little girl into one resembling a drowned rat. But the tragedy becomes funny when the child laughs and giggles and wants Daddy to do it again!

Be ready for this type of little story any time and anywhere. Usually the last scene occurs first, and if you're there with the camera, and get it, the others may be taken later as required.

A third theme that can be adapted to a story in three scenes is the familiar introduction—development—result theme. The introduction tells the viewer what is going on, the development leads him to the height of the action, and the result or conclusion sums up the story and draws it to a close. The usual fishing story is always a good example.

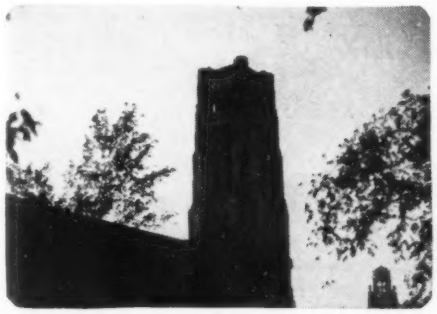
The entire movie might be about a vacation or a trip, and it should be well known to the audience that the old man is a great and successful (his version) fisherman. So, the first scene shows the old man and his daughter or little son sitting beside the river or lake fishing. The second scene or development shows the youngster catching a fish, to the disgust of the old man. And the third scene, or result, shows the catch: the little guy holding a string of big ones, the old fisherman chagrined at his catch of small ones, or a scrawny snapping turtle or two. Or the picnic theme: the introduction shows preparations for roasting wieners, the fire, and the actors gathered around, all working at the art of getting just the right tan on the hot dogs. The development might be a closeup of the fire silhouetting the wiener skewered on the

stick. The result, or third scene might be the youngster eating the roasted wiener, her face a mixture of ecstasy and ketchup!

A fourth theme readily adaptable to a story in three scenes is the familiar "here it comes! here it is! there it goes!" theme, which is particularly adaptable to travel movies. A precaution: this theme becomes monotonous after being used just once; twice is vicious repetition! The

Buildings, such as this chapel, are good material for descriptive stories in three scenes. First scene could be a long shot, showing chapel in its general environs.

Second shot could be a closeup such as this, showing the tower against a background of beautiful clouded sky.



Third scene could show another angle of the church, in a semi-frame of trees, such as the one that is shown above.

best known example is familiar to everyone: your car pulls into the rest camp, you all eat your picnic lunch, and your car pulls back onto the highway and speeds away.

A nice variation of this theme can be used anywhere, such as in your back yard. For instance, a long shot is followed by a closeup, which is then followed by a second long shot. You see, instead of the subject coming, staying, then going, the camera moves closer to the subject, sees it, then moves away. This is done as follows: the first long shot shows your flower garden with your wife and child

COLOR PHOTOGRAPHS
WITHOUT COLOR COSTS

- Less than one cent per print.
- No special skill needed.
- No artistic ability required.
- No colors to mix.
- No brushes necessary.
- Changes easily made.

IT IS truly simple to give color magic to dull black-and-white prints. Even if you have never colored a photograph before, you will find that Marshall's Photo-Oil Colors are so easy to use that you will create glowing life-like effects the first time.

Marshall colors are transparent; the highlights and shadows of the original print shine through, giving the appearance of actual shading.

Marshall colors, named for the things to which they refer (Lip, Cheek, Flesh), are applied with tufts of cotton. For small areas a bit of cotton twirled on a toothpick does the trick.

Each Marshall set contains a FREE instruction booklet giving complete information on the application of the colors and the exact colors to use for various purposes such as blonde or red hair, grass, tree trunks, brick walls, etc. . . . in fact EVERYTHING to give you the "know-how" for perfect results.

YOU CANNOT RUIN A FAVORITE PRINT WITH MARSHALL'S PHOTO-OIL COLORS. You can always remove the color and begin again. For amateur or professional, Marshall oils assure brilliant natural hues at a cost LESS THAN ONE CENT PER PRINT.

Sets are priced from $1.25 to $5.85

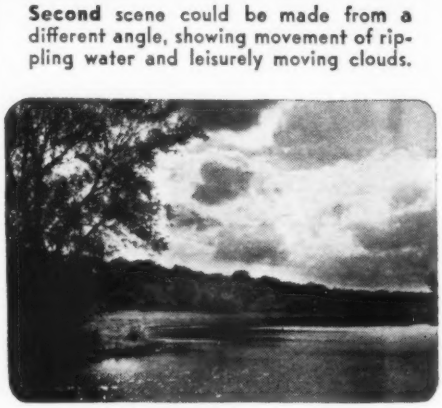
PERSONAL ATTENTION • EVERYTHING PHOTOGRAPHIC

strolling along and admiring the flowers. You should instruct your subjects to walk toward the center of the scene. The second scene would be a closeup showing the better two thirds of the family admiring a particularly luscious blossom. And the third scene or concluding long shot (which, incidentally, should be taken from a new point of view) should show them moving away from the center of the scene to other parts of the garden. It usually is best to make the first two

Beauty of a river can be shown better in three scenes. First could show a woman and child strolling on the bank.

Second scene could be made from a different angle, showing movement of rippling water and leisurely moving clouds.



Third scene of the sequence could be made from still another camera angle, and show backlighted sparkling waters.

scenes somewhat longer (twelve to fifteen seconds) than the last one (which might be six to eight seconds long).

And a fifth theme adaptable to a story in three scenes is the well known running gag. Probably the best way to make this little story is to have three scenes to be repeated three times at intervals throughout the movie. For example, in the movie of the new baby, the diaper washing sequence is good material for little stories. The running gag consists of these three scenes: first, Daddy washing the diapers in the washing machine (see illustrations); second, wringing them; and

third, hanging them out to dry. By repeating this series three times, each time making the action faster and more hectic (accomplished by tilting the camera a little, and decreasing the number of frames per second) and each time making each scene a little shorter, you will evoke many a chuckle from experienced daddies in your audience. For what is an experienced daddy but one who has washed mountainous piles of diapers and has acquired rough wash-day hands?

Those are a few examples. Many more suggest themselves immediately; use your own ingenuity and your movies will improve immeasurably. Let me again emphasize the fact that these little miniature stories are to be added to your movies wherever they fit in or wherever interest is lagging. They're not supposed to be anything profound; they are interesting sidelights, each set of three scenes complete in itself but related to the general theme or subject of the whole movie.

In making these short stories, make the point obvious, simple, unmistakable, and plain; make your humor robust and easy to understand and appreciate.

You will be surprised to see how much your movies will be pepped up, how your audiences will relish seeing them and look for more movies when you turn the lights on instead of suggesting a card game or pantomiming a thirst that can be quenched during intermission.—

CAN YOU SPARE A REEL?

A plea for no-longer-used 16 mm film to be used for education and instruction of underprivileged children comes from the Rev. Anselm Francis. He says: "I am wondering if there aren't some of your readers who might have some reels of film tucked away . . . we know of thousands of poor boys and girls who would more than enjoy such discarded film. There is one school in New Jersey—with 514 children—that has asked us for films. We also send films for free shows to schools in Pennsylvania, New York, Maine, and North Carolina." The film will be welcomed regardless of condition, and they can use both silent and sound prints. Father Francis' address is: Franciscan Friars of the Atonement, St. Joseph's Friary, Saranac Lake, New York.

Gordon Kohler — Popular Photography

"I can see your ideas on splicing are rather vague, Montgomery!"

USE A HEILAND...

FOR SHOTS *You can't afford to miss!*

For those pictures you can't go back and take again . . . those once in a lifetime opportunities . . . use a HEILAND Flash Synchronizer and you'll HAVE the picture. That's why press photographers use HEILAND equipment — it's dependable. There's a HEILAND especially engineered for YOUR camera. See your photographic dealer today.

CAMERA CLUBS

Lombard Club Sponsors Annual Civic Contest

Realizing the publicity value of their city's renowned Lilacia Park, members of the *Lombard* (Ill.) *Camera Club* are running a contest to obtain the best possible photographs of the lilac center. In cooperation with the local park board, the club selected and crowned a "lilac queen" who, with her attendants, received considerable attention from Chicago metropolitan newspapers. So successful was the contest that the club has been asked to handle a similar event each year henceforth.

The impartiality and suspense with which the queen was chosen are worthy of note. Each entrant was assigned a number, which was used by the judges in voting. Sealed ballots were handed over to a committee, which selected the five numbers—not the names—receiving the most votes. These numbers then were given to the individual who originally had assigned them, and the winner's name thus was not known until the last minute, although the competition had received considerable publicity for several weeks prior to that time.

Cash for Zoo Pictures

In cooperation with the Brookfield Zoo, the *Nature Camera Club of Chicago* is sponsoring a contest for animal pictures taken in any zoo in the world. Prints and slides are eligible, cash prizes will be awarded, and the deadline for entries is September 30, 1947. There is no entry fee, and all work submitted will be returned to the owners. For further details, write to Ben Hallberg, 3336 Grand Blvd., Brookfield, Ill.

Correspondence Club Formed

Designed to foster acquaintance among those having similar photographic interests, and to promote the exchange of prints, slides, and movie films, the *Photographers' Correspondence Club* has been formed. Membership is open to young and old, the prime requisite being a sincere interest in photography. For complete details, send a stamped self-addressed envelope to the secretary, Edwin J. MacEntee, P.O. Box 90, Station 20, New Orleans 15, La.

More on Negative Sizes

Each year, Ward Pease uses *Ft. Dearborn Camera Club's* "Spotting Brush" as a forum in which to discuss the respective popularity of various negative sizes and cameras among successful salon entrants. On the basis of this year's research, Pease finds the 2¼x2¼ negative and the twin-lens reflex camera far ahead, with 3¼x4¼ and 9x12 cm equipment close behind. The 35 mm negative has dropped to sixth place in the lists, although the story would undoubtedly be a different one were color included in the analysis. Of course, a good picture is a good picture regardless of the size or type of camera used in making the negative—we just thought you might be interested. (And we're taking no sides in any of the juicy camera club arguments this item may stir up.)

Hawaiian Council Convenes

By boat and chartered plane, delegates to the annual *Territorial Camera Club Council* convention gathered at Kauai, T.H., in July. A full schedule of business sessions, sightseeing trips, lectures, and demonstrations proved highly successful, and all-expense registration fees were pro-rated according to the distance traveled by each individual delegate. Correspondent for the council is Urban M. Allen, who can be addressed in care of the Honolulu *Star-Bulletin*.

New Yorkers, Irish Swap Prints

With the formation of the *Ulster-American Print Circle*, photographs are being exchanged in dozen lots by avid groups of Irish and American photographers, it is learned. According to reports, no punches are pulled in criticizing prints, and both groups are broadening their perspectives while widening their circle of friendships. Ed Wilson organized the New York contingent, while the Irish are headed up by Thomas Berry of Culmore, Londonderry.

For Your Correspondence List

Each month word comes from newly-formed groups of enthusiasts who are anxious to exchange correspondence and ideas with those having more experience in the camera club field. We urge you to drop these outfits a letter or a card as soon as possible.

First meeting of the *Fort Payne Camera Club* was held at city hall July 15, 1947. Acting president is J. B. Johnson, who manages the DeKalb Studio at 207 S. W. Gault Ave., Fort Payne, Ala.

The Erie Photographic Society was organized only recently and already is interested in seeing any available traveling salons. Correspondence should be sent to Miss Sarah Moore, 438 E. 28th St., Erie, Pa.

In Ogalla, Neb., the *Trail End Camera Club* has come into being under the guidance of professionals and leading amateurs in the vicinity. Letters can be addressed to the secretary.

Not quite one year old, the *Long Island Lighting System Camera Club* already is at work on its first annual salon and is going into color work emphatically. Parties and field trips are on this group's schedule, and the president is John J. O'Connor, 250 Old Country Rd., Mineola, L.I.

Now in the process of formation, the *Bellflower Camera Club* at present is under the guidance of Lloyd Stevens, whose Photo and Sports Center is located at 643 Bellflower Blvd., Bellflower, Calif.

The Associated Camera Club is anxious to obtain program ideas. Bart J. DeVito is secretary of this new organization, and

he can be addressed at 4025 Hubbard Pl., Brooklyn 10, N.Y.

Want to Exchange Salons?

Print exchanges always are beneficial to the clubs involved, and for that reason we bring to your notice the following groups which want to engage in this activity:

Tripod Camera Club, attention Fred Mitchell, 185 Oakland St., Bristol, Conn.

Franklin County Camera Club, attention Morris Wolpert, 21 Congress St., Greenfield, Mass.

Midwood Camera Club, Max Navis, secretary, 1640 48th St., Brooklyn 4, N.Y.

Miniature Camera Club of Philadelphia, care of J. G. McGonigal, 130 Woodland Rd., Wyncote, Pa.

Cairo Camera Club, M. C. Currier, president, 637 34th St., Cairo, Ill.

Terre Haute Camera Club, attention print director, P.O. Box 222, Terre Haute, Ind.

Oaklyn Camera Club, John Stratton, secretary, 28 W. Haddon Ave., Oaklyn, N. J.

We Hear . . .

THAT when its monthly salon winner is chosen, *Fine Arts Camera Club* (Evansville, Ind.) has contact prints made from the negative and sticks one on each copy of the club bulletin. Nice idea.

Edward C. Wilson has been elected president of *Pictorial Photographers of America,* with the faithful Sam Grierson continuing as secretary-treasurer.

Here are the names of a couple of recently-elected club secretaries for your correspondence file: *Shorewood Camera Club,* Andree Robinson, P.O. Box 1906, Milwaukee, Wis.; and *Camera Club of Rhode Island,* John B. Mayall, 144 Westminster St., Providence, R.I.

When Doc McGinnis let off his blast in *Woodland Camera Club's* "Forum," regarding the use of initials after photographers' names, he spurred the redoubtable Fred Quellmalz into action. A recent issue of the California club's bulletin carries the complete exchange of letters between Fred and the doctor, and it makes fascinating reading. Both gentlemen did very well, and it's gratifying to note the sincere courtesy and broadmindedness which marked their epistles.

The 1947 Chicago International Salon has been put on slidefilm, as was done last year, and you can obtain copies of the film at $10 apiece from Fred Edwards, Chicago Historical Society, Clark St. at North Ave., Chicago 14, Ill.

Manhattan Camera Club's "Amacam" is one of the more professional-looking bulletins. Nice paper, nice topography, good photographic reproduction. The club, by the way, is 11 years old, and we send them birthday greetings herewith.

A neighbor of ours is determined that he'll reload a movie film magazine. So far his efforts to use a reloaded job have resulted in his shooting blanks of two parades and his baby's first steps. Now he wants to borrow our 8mm camera. Of course the thing's insured, but . . .

—*Whit Hillyer.*

Rely on NASH COLOR SERVICE ★ For

THE FINEST COLOR PRINTS AND TRANSPARENCIES

Color shots you'll treasure always

Nash Color Prints

Yankee AGITANK

ADJUSTABLE DAYLIGHT CUT FILM TANK

12 cut film or film pack exposures from 2¼" x 3¼" to 4" x 5" can be developed in the new YANKEE tank with only one dark room loading operation *that's fool proof*. You load each groove in the adjustable rack through a loading bar that slides along to each new position with positive accuracy.

When inserted, each film is held under special tension that prevents sagging or contact with other films.

Only 4 parts—tank, cover, rack and bar. Tank is agitated merely by gentle rocking. Cover has extra large inlet and corner outlet for rapid filling and emptying plus engraved solution capacity chart. Made of strong, acid-resistant Bakelite.

* Tax included.

Available at your photographic dealer now.

Architectural Photography

(*Continued from page* 49)

forest, go in and shoot out; if hemmed in by city buildings try the roof across the street.

Having taken the subject from a distance as an entity related to setting, approach for more specific views. Seek then the character-giving parts which tell the story, the important points, the features. Eliminate the superfluous.

Even after we have found the part we wish to accent most, with the light that flatters it best, we must still arrive at a composition. Many ingredients are needed: a dominant (usually), a certain equilibrium (rarely symmetry), variety of line, mass, light and shade, rhythm, and other abstruse elements which one can read about in savants' notebooks. I try to sidetrack all divine triangles and optical metaphysics by the simple device of squinting. Half closed eyes let one concentrate on the main elements of the composition without being distracted by the nonessentials. Squinting gives contrasts similar to those on the final print and helps flatten the three dimensions of the scene into the two of the photograph.

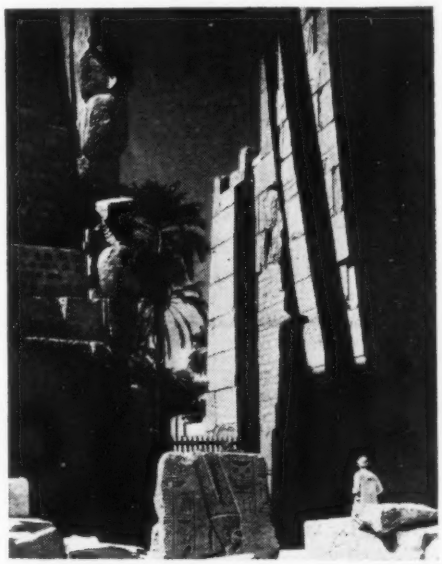
The device of holding down the foreground with parts of another building, trees, and figures often will give depth, especially if the foreground value is darker than the background. Note in the picture of the Old City in Stockholm how the main subject matter is projected back in space by the foreground. In addition to giving depth, a strong foreground can be the basis of the whole composition. If this foreground can duplicate the main element architecturally, so much the better. An example of this is the photograph of the Grecian temples, where the column bases are really fragments of the columns beyond.

If our subject matter is composed of a number of separate buildings, there will be many opportunities to project them in space by light and shade. Do not approach a group with the idea of only getting individual shots of each, but try to relate them to each other, tie them together to give an impression of spatial composition. It is not necessary to include whole sides of each to do this. As a matter of fact more can often be expressed by a choice detail than any overall panorama.

That same illustration of the Grecian temple recalls another point which is useful to bear in mind—camera height. It was desired in this case to give some feeling of the crowning quality of the Parthenon, to emphasize its commanding location. If the camera had been at eye level it would have only partially succeeded, but by placing it almost on the ground the whole building seems resting on a pinnacle. Furthermore, by including a small section of the Propylea in the foreground, with its rather rhythmic shadow, the composition was given depth and plasticity. It was of course necessary to stop the lens down as far as it would go to give sufficient depth of field, and also to make use of the swing front. Note

that the picture was made when the sun just picked out the edges of the columns at left, giving life to the shadow side. In all cases be aware of camera level.

In photography we can include figures as a reference of size; however, avoid at all costs backing some unfortunate up against the wall, self-consciously staring into the camera. Make the figure fit into the picture naturally, make it a considered part of the composition. Try placing a friend in the spot you think best, have him face away from the camera, and in the act of taking a step—not standing stiffly. Figures can be used in a number of ways: for reference only, to lead the eye into the picture, or as a strong point of the composition itself to hold



Here is another example in architectural photography where a figure has been used to denote scale. Temple of Karnak, Egypt.

down a side of the picture. However, I find the use of figures so unpredictable that I generally take two shots, one with and the other without figures.

Interiors are undoubtedly difficult. In addition to the obvious need for wide-angle lenses, a battery of lights seems necessary. Actually the main idea, as I understand it, is to illuminate the room so that the contrasts are weaker than you think they should be—with dark corners non-existent. At any rate this is the safest way to start. However, I find that a surprising amount can be done with daylight, sometimes supplemented by fixtures in the room. The lovely Hedquist auditorium was taken in the very early morning when the sun was streaming across the entire width.

Equipment and technical apparatus have been purposely left at the end as their importance is always less than that of the photographer. The best camera in the world can take the poorest pictures, yet an expert can produce top-notch stuff with a box camera. However, architectural photography does make demands unknown to most other outdoor work. Good pictures can be made with almost any camera, but a moderately good one will let you take more and better ones —if you know how to use it. In any case get a simple camera first and graduate

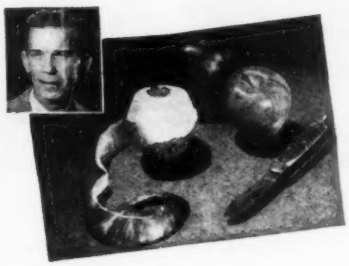
You too, can

LEARN PHOTOGRAPHY
in the Professional Manner . . .
STARTING IMMEDIATELY!

Read what these typical students have to say about their training at the Baltimore Institute of Photography:

MISS MURIEL SHAPIRO: *I signed up for the Commercial Course, because I knew specialists made high pay while doing fascinating work. My instructors started me right in taking pictures and already, in my sixth week, I'm turning out work such as this example.*

MR. C. W. TIFFANY: *I entered the Portraiture Course, planning to specialize in Glamour Portraits. By working closely with my instructors, I have improved my technique so that I am turning out portraits like this daily.*



MR. WILLIAM PARKS: *The navy started me on photography. Came here for a brush-up in my color technique. Individual instruction plus practical experience is doing the job! Yes . . . I'm making fine progress and plan to open my own studio when I graduate.*

only when you find yourself limited.

I believe the best kind for architecturals is the rectangular, groundglass back, folding variety, equipped with rising and sliding front and taking sheet film. This is best used on a tripod. The reasons for this choice are several. With the groundglass back one sees exactly and full size what the lens takes before it takes it. No matter how accurate the usual finder might be (and this includes those corrected for parallax), there is always a degree of uncertainty present which the groundglass obviates. Nor will an optical finder give anywhere near the image size of the final print. By focusing and composing on groundglass, we are not only sure of the amount the lens subtends but about its focus as well. Groundglass viewing with its great ease of composing and focusing is a good reason for the popularity of the twin lens reflex.

Subjects for your architectural photographs may be found in the country, too. Wooden building, Wallis, Switzerland.

The groundglass, sheet film type of camera almost always has what is called a rising, falling, and sliding front, a feature almost no miniature and few roll-film cameras possess. This simply permits you to keep the camera back level and elevate the lens relative to the back to include the subject from top to bottom. The distorted perspective which results from tilting a camera is well known and always occurs unless the back is parallel to the building. Many of this type of camera also have "swings," which means that the lens front and back can be turned to various angles, a feature useful in more advanced work for freedom in focusing and composing.

There are other advantages inherent in this kind of camera, such as interchangeability of lenses, but the ones mentioned are sufficient to justify its choice. Fortunately such cameras are not over-expensive—not nearly as much as some miniatures, and several makes can be had. The preferred sizes are 2¼x3¼, 3¼x4¼, or 4x5.

After the camera, a tripod perhaps comes next in importance. You might think that you are in for a lot of fuss and bother just for a few pictures when the word tripod is mentioned, but if you want results you must expend the effort. You soon will find that a light metal folding support (although the bulky wooden ones are generally sturdier) will become second nature. I carry thirty pounds now, fifteen on each shoulder, and don't give it a thought.

A medium yellow filter to give qual-

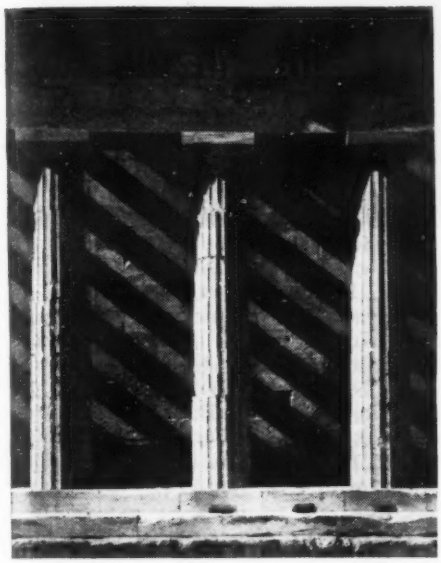
ity to the sky and bring out the clouds, an exposure meter to determine diaphragm opening, and a lens shade to keep the direct sun off the lens completes our outfit. It can eventually run into many lenses, a dozen filters, and countless other useful (or shiny) gadgets, but it need not go beyond one lens, one or two filters, the meter, and the lens shade.

Remember, above all, whether or not you have the fancy equipment, or just the box Brownie, that architectural photographs are not something you must travel over the world to find and make. They will be in your own home town, when a new school, church, library, or other buildings have been put up. You'll find them on your own trips, usually a scenic point of interest which you wish



Attempt, above all, to express the brilliant play of light and shade, and their patterns. This is the Thesion at Athens.

to preserve and remember. You'll see them as you drive along the road—perhaps they are an industrial building which strikes you with its dominating lines or sky piercing smokestack—maybe a tiny cottage frame among the trees. And should you travel, remember that the buildings you see are just as interesting as any people you find, that stone and steel can make as striking a subject for your pictures as any other scene you'll find. And if you follow the suggestions given in this article, the results should be worth keeping.

Admittedly, the best results will undoubtedly come from enlarging your own negatives if you have the desire, ability, and experience, but the "if" is a big one, and unless the itch is there let some competent professional finishing service do the job for you (rarely the corner drug store). When you think you have something really first rate, have what is rather juicily called a "salon" print made. Costing two to three dollars, they are no more than very carefully made enlargements with more thought and attention to paper, exposure, and emphasis than is possible with run of the mill work. They will give your morale a great boost.

Now, when you are equipped and ready to shoot, remember and analyze the three

Announcing

CLARUS FLASH GUN*

Here it is—the flash gun you've waited for . . lightweight . . . sure in action . . . easy to use. No need to be a contortionist with CLARUS . . . position under camera assures easy natural handling. No moving parts—uses only 2 medium batteries—BUILT SO YOU NEVER MISS THE PICTURE.

Your dealer has it, at $9.85 plus tax . . . or will be glad to order it for you. But DON'T take anything less than CLARUS—TOPS today . . . TOPS allways!

*P.S. POSITIVE SYNCHRONIZATION

No disappointments . . . synchronizer is geared (at all speeds) directly to the shutter curtain. Motion of curtain fires the flash bulb. IT IS IMPOSSIBLE TO MISS THE PICTURE.

main points mentioned earlier.—WHAT to take, and WHERE and WHEN to take it. (1) WHAT—the character giving parts, the impressions; emphasize the important features by approaching them; relate to setting. (2) WHERE—stand where the composition makes a dominant; get depth; relate buildings to each other; half close your eyes so that masses of light and shade build up and non-essentials disappear. (3) WHEN—have some parts in full sun, others in half light or shade; wait until the subject is modeled with sunshine from one side or the other, but rarely behind. Take your time and remember—always analyze the scene first.—

WINS EMPLOYEE PHOTO CONTEST

Bermuda Sunset, showing the sun rays slanting through clouds over Elbow Beach, Bermuda, won first prize in an employe contest conducted by Pan American World airways. The picture was made by Hamilton Richards of Great Neck, N. Y., while he was stationed at the Clipper base in Bermuda. He used a Kodak Model 1A, Verichrome film, lens set at *f* 7.9 and an exposure of 1/25 second with a medium yellow (K2) filter.

NUMBERING PERSONS IN GROUPS

Many times an amateur photographer wants to remember the names of persons appearing in a group photograph in the proper order. This is especially important if he plans to have the picture published because editors insist upon proper identification. Unfortunately, large groups tend to break up as soon as the photographer has snapped a picture, making it difficult to secure names in the usual left to right order. This difficulty can be avoided if, when the group first is posed, the photographer assigns each person in it a number. The first person on the left would be No. 1, the second No. 2, and so on. It is an easy matter for each person to remember his own number, and should the group scatter the moment the picture is taken, the photographer can still secure the names in their proper order.—*Duane Featherstonhaugh, Duanesburg, N. Y.*

USE OUTDATED FILM TO TEST HYPO

Film which is very much outdated need not be thrown away . . . it will make a good test for hypo exhaustion. Cut the film in strips about two inches long and a half inch wide. Soak in water for a minute or two and then place in the fixer. If it takes longer than ten minutes for the film to clear, discard the hypo. The correct fixing time for good hypo is found by doubling the time that it takes to clear. —*John Stockwell, Brooklyn, N. Y.*

Newer Infrared

(*Continued from page* 51)

should remind readers that the "light" sources most generally useful for infrared photography are those most used for ordinary photography—namely, sunlight and the common lamps such as the tungsten filament studio lamps, the overvolted lamps of the Photoflood type, and the flashbulbs. Some of the lamps are made with black bulbs which allow infrared to pass and absorb most visible light. There have been no new lamps put out recently especially for the infrared, but experience has shown that the recent Type 2 bulb for the Kodatron Speed Lamp is satisfactory for infrared exposures of very short duration. The S-2 type of lamp also is well suited. Naturally, filters have to be used on the lamps or over the camera lens. All infrared films respond to blue light as well as infrared, and it is necessary to cut this out. This generally is done by the red Wratten No. 25 filter. If the pictures are to be taken in the dark, which we shall speak of later, the lamps are covered with the Wratten No. 87 filter, or the special lamps coated with the black filter are used.

Special cameras are not required for infrared photography. In fact, all types of normal cameras can be used. The films are made in this country by the Eastman Kodak Company in the form of roll film, miniature camera film, sheet film, and for aerial cameras. Plates also are made for special purposes. The speed of the roll and sheet films is such that good negatives can be obtained outdoors in sunlight at 1/25 second at *f* 8 through the Wratten No. 25 or 70 filter. If a deeper filter is used, such as the No. 87 or 88a, for greater haze penetration or more pronounced infrared effect, the average exposure will be 1/25 second at *f* 5.6. Exposure meters of the common photo-electric types cannot be used satisfactorily for evaluating outdoor infrared exposures because there is not a strict relationship between the amount of visible light, which the meter measures, and the infrared in daylight. The condition of the atmosphere upsets the simple relationship. In the case of studio lamps of the tungsten filament type, however, the meter can be used once it is calibrated by making trial exposures.

For indoor photography using two No. 1 Photoflood lamps in reflectors, and infrared sheet or roll film, an average exposure will be ½ second at *f* 8 with the two lamps five feet from the subject. The meter ratings for tungsten lamps are ASA 8, Weston 6, and General Electric 10.

The actual exposure for infrared photography will depend on the nature of the subject and on its distance from the camera to a greater extent than in the case of ordinary photography. If dark objects strongly absorbing infrared are photographed, longer exposures must be given than in the case of highly infrared reflecting objects such as foliage or grass. In closeups, the exposures also must be increased.

For pictorial photography the strong

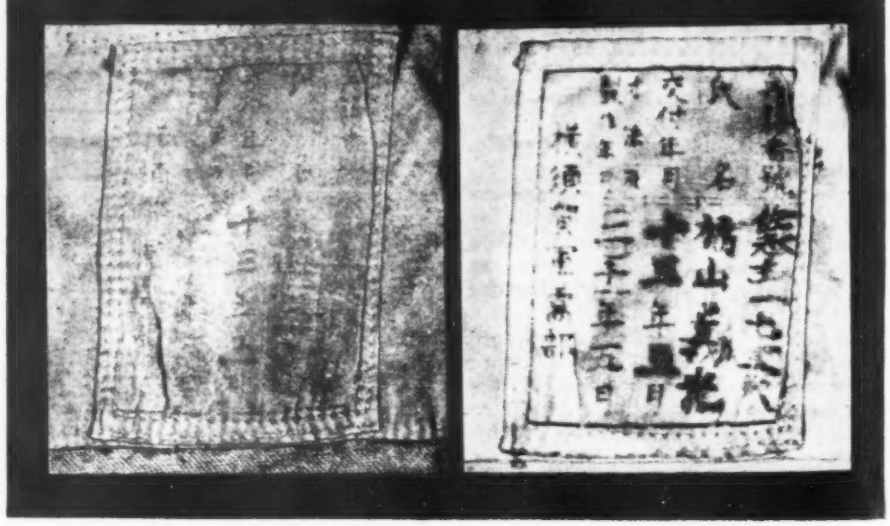
DOVER FILM CORP., DOVER, N. H., U. S. A.

Ultra-speed flash now is being used in conjunction with infrared photography, as shown in this shot of a lecture audience. It was taken with three Kodatron lamps, hidden behind a Wratten No. 87 filter in a booth to absorb visible light.

contrasts typical of infrared photographs frequently are undesirable. They can be reduced in three ways—by developing to low contrast, as for instance in D-76; by appropriate printing; and by using a filter which lets through some blue light. Such a filter will be pale yellow—for instance, the Kodak Color filter or the Wratten K1. If no filter at all is used, the photographs resemble to a large extent those taken on panchromatic films. If the camera happens to be loaded with infrared film and a normal type of picture is required the filter may be omitted in which case the exposure in sunlight will be of the order of 1/50 second at *f* 16. In forestry survey from infrared aerial photographs, the interpreters seem to prefer those made with the red No. 25 filter to those made with the deeper red No. 89a filter, which commonly was used in aerial work. The Army Air Forces have recently adopted the No. 25 type of filter rather than the old standard No. 89a for infrared aerial photography.

Shadows are very black in infrared photographs, at least when the sky is clear, because they are illuminated only by scattered sky light which is devoid of infrared. Large areas of shadow should therefore be avoided. If the pale yellow filter is used, some of the blue light will be recorded by the film and the shadows will appear somewhat less dense. Large areas of all infrared absorbing objects should be avoided in general for pictorial photography. Water in particular is an offender in this respect. On the other hand, large areas of highly infrared reflecting objects, such as foliage and grass, should be avoided if great white patches are undesirable in the picture. They may be darkened somewhat by using the paler filters. Very striking architectural photographs can be made of bright buildings against the sky, which appear dark, by exposing fully and developing to rather low contrast. If high contrast is desired in infrared photographs, it can be obtained readily by giving full development in D-19 developer.

A thing to be careful about in the case of the camera to be used for infrared photography is that the bellows and shutter blades do not allow the infrared to pass. With most cameras of recent



Obliterated data the eye cannot see does not escape the camera with infrared film. These Federal Bureau of Investigation photos show the label of a Japanese uniform, as photographed with panchromatic film (left) and with infrared (right).

make there is no fear, but with older cameras there might be trouble with fogging of the film if the bellows in particular are not checked. Old, hard rubber draw slides and shutter blades may be especially bad offenders. Infrared photographs have actually been taken right through wooden or hard rubber slides.

The lenses used on cameras are designed to give their best focus to visible light, and they may not be at their sharpest for infrared photography unless a change in focus is made. This always is done by extending the bellows—that is, focusing on an apparently slightly nearer object. In practice, this change in focus frequently is much less than one has been led to believe, and in many instances it may be ignored. The Kodak Data Book of Lenses gives corrections for many of the lenses. In general, the changes rarely amount to more than one per cent, usually less, and they need only be made (except for the most critical work) with lenses of long focus and wide aperture. At short working distances, the infrared focus correction required increases the closer the subject is. It is usually more in the case of lenses which are focused by varying the space between the elements by turning the front of the lens.

Infrared films are developed in the common negative developers, following the instructions of the manufacturer. It is not possible, however, to use the common safelights, because they all transmit infrared rays, and so would fog the film. Special safelights, for instance the Wratten Series VII, are made to absorb the infrared and pass green light, and are intended for infrared darkroom illumination. Infrared films have very low sensitivity to green light, and this color can therefore be used in the darkroom. The green panchromatic safelights must on no account be used, however, for they allow the infrared to pass freely.

Probably the best known use of infrared photography is in revealing the distance through atmospheric haze. It is able to do this because infrared rays can penetrate some suspensions of dust and smoke in the air better than light to which panchromatic films respond. It is quite wrong, however, to say that infrared photography permits penetration of fog, and that it can allow ships to be navigated at sea in a dense fog, and so on. Such statements appear repeatedly in the press, but the actual facts are that the denser the haze, fog, or mist, the less is the chance of penetrating it by the infrared used in photography, and if a fog is so dense as to be a menace to safe navigation, infrared offers no help. For long-distance photography on hazy days, however, and in high altitude aerial photography, the infrared offers a distinct advantage. The most outstanding published examples of this are the photographs made by Captain Stevens on the second National Geographic Society-U.S. Army Air Corps stratosphere balloon flight, from a height of fourteen miles.

Stephen H. Spurr, in conjunction with the Fairchild Aerial Surveys, Inc., has made a study of the use of infrared film in forestry survey, with quite interesting

THE CHOICE OF PROFESSIONALS!

STROB* ELECTRONIC FLASH UNIT

The high speed light in use longer and more widely used than any on the market at this time . . . operates on any 110 volt, 60 cycle, A.C. light socket. Consists of SR power unit, 2 SR flash lamps with G.E. sealed beam flash tubes, 15 ft. A.C. power cord, 15 ft. tripper cord, spare fuses, extra tripper connector. Packed complete in rugged fibre carrying case. Write for full details or see your dealer. Price $260.00 plus tax.

For outstanding performance — for tested practicality — get acquainted with the name SR.

Here is equipment actually designed by a group of working professionals and recognized pioneers in the field of high speed photography — Frank J. Scherschel, Edward R. Farber, Robert H. Dumke, Egon Grimm. Already more leading professionals, newspapers and magazines use SR equipment than any other of its kind. You, too, will get better results. At better camera stores everywhere.

QUICK CHANGE CLAMP

Designed to mount light cameras and lamps almost anywhere. Consists of C clamp, camera mounting flange, camera stand, adapter, permanent camera mount, tripod socket adapter and adjustable swivel. Price complete $5.95.

STAND

Precision engineered of 24 ST aluminum, anodized for clean handling. Extends to ten feet, telescopes to a compact 25 inches. Weighs only two pounds, but amazingly rugged. Virtually tip-proof. Price $11.95.

results, particularly in photographing the Harvard Forest at Petersham, Mass. It appears that infrared photography permits the differentiation of tree species to quite an extent. In such photographs, hardwoods photograph nearly white, while softwoods appear gray to black, and various softwood species can be distinguished by their tone differences. All hardwood species photograph lighter than the softwoods by infrared but so far it has not been possible to distinguish between the various species. Trees which have lost their leaves, or which are dying appear black by infrared, and older trees appear darker. It will be evident that photographs of this type will be of great economic value to the man interested in determining the size of trees and the extent of stands of different kinds. They provide the information in a much simpler way than the laborious methods of ground survey where the trees are actually counted. The infrared also is being applied to geological survey with some promise of success, and there is no doubt that it will take its place in the vast schemes for aerial survey which are now being formulated.

Modern science has brought many of its techniques to bear on the undoing of the criminal, and infrared photography takes its place with ultraviolet, x-ray photography, and chemical analysis as an important means of investigation. It has been used with conspicuous success where pencil or carbon inks have been obliterated by dark inks which may appear opaque, but which are transparent to the infrared. It is also usually successful in photographing old documents which are faded and dirty. Some instances are on record of infrared photography deciphering documents which have been charred by fire, although the F. B. I. has reported that in their experience it has seldom been of value in this connection. Much depends on the degree of charring.

The infrared has been used with success in the examination of works of art. In the study of the techniques of the old masters, it has been used to reveal the sub-surface modeling in rendering anatomical detail, to show alterations and over-paintings, and to reveal signatures and characteristic brush marks.

We already have mentioned flashbulbs coated with an infrared lacquer for photography in the dark. There was some interest aroused in them in England in the earlier days of the war for photography in blackouts, and some were used for a time in this country by press photographers, in conjunction with Infrared Aero Film cut to sheet sizes. They appear to have been of transient interest, however, except when chosen for highly specialized uses.

Other applications of photography in the dark have been made, and one instance is shown in the illustration of the audience listening to a lecture. It is possible to imagine that some lecturers—and audiences—would receive quite a jolt if after the lecture they were shown candid photographs of the effect of the learned discourse. Some dark photographs have successfully been made of intruders—the

DETROIT PUBLIC LIBRARY

act of opening a door, for instance, tripping a shutter with synchronized infrared flash to expose a picture of the unwanted guest.

One point to remember in all this dark photography, however, is that the eye is quite sensitive to very deep red light, so that if the source is to be invisible a filter must be used which only allows the long wavelengths to pass. The infrared film is not sensitive to very long wavelengths, so a compromise must be effected if short exposures are to be used. The trick is to direct the lamps not at the subject, but at a reflector like a light-colored ceiling, so that the photograph is taken by indirect illumination. Then a little deep red light, which would be visible if the subject looked straight at the source, can be allowed. The Wratten No. 87 filter is generally satisfactory for indirect illumination, although the filament of a clear-bulb tungsten lamp can be seen through it by looking straight at it in the dark.

One application of infrared photography in which a number of people have dabbled at odd times, and which is being more seriously studied by a number of groups at present, is what may be called "photothermometry." This involves taking infrared photographs of hot objects, and from their appearance in the print, i.e. the variation in density, deriving an idea of the distribution of temperature (or rather of emissivity) over the surface. For instance, an infrared photograph of a flatiron might well show that it was hotter near the center, or over the heating elements, than at other parts. The hotter parts will appear whiter in a print—or darker in a negative. The method is not yet worked out so that it is known to be reliable, but it has promise over a temperature range of, say, 300°-400° C., just below visible red heat. There is little object in using it in the case of red hot objects, which can be seen, or photographed on panchromatic films.

Analogous to the ability of infrared to penetrate haze and similar atmospheric suspensions, is its ability also to pass through the surface layer of skin and so reveal the underlying small veins. The veins may not show up very strongly in the case of normal persons, especially if they are fat, but some doctors have recorded distinct changes in the pattern of the veins in connection with some diseases, for example, cirrhosis, axillary thrombosis, and some tumors. Infrared photography also has been of interest in dermatology, by showing up the condition underlying sores and scabs, and it has been employed in the investigation of some eye troubles.

In general, infrared photography is well worth the attention of the photographer. It is capable of beautiful pictorial effects, if properly used, and has already proved to be a very important photographic tool in science and industry. Photography bids fair to branch out into many special fields in the near future, and infrared photography undoubtedly will be used quite a lot. Photographers who expect to apply their knowledge of their subject would do well to develop an acquaintance with the infrared.—

DELTA FOR LENSES and FILM BARGAINS

Reserve your copy NOW! We are cataloging our entire stock of lenses —be sure of receiving your copy—ask for Lens Catalog "M." Wait till you see the eye opening values we are planning for the Fall! Thousands of fine lenses, in barrels, shutters, focusing mounts; or, if you prefer—tailor-made to fit YOUR camera. Don't forget—WRITE NOW!

JUST RECEIVED . . .
KODAK 16MM MAGAZINE SUPER X MAGAZINES, outdated, but good by our actual tests. Tropically packed to insure results. Priced for quick clearance...$1.95 each; $18.50 per dozen
(Price includes processing and return by Eastman Kodak)

ATTENTION: KINE EXAKTA OWNERS
We can at last supply bayonet adapters in matched pairs, male and female, for use with standard Leica Extension tubes, to fit the KINE EXAKTA camera and lenses. With this set, any lens in a focusing mount can be screwed into the set and be used with this camera. Leica lenses are instantly fitted into the bayonet adapter and, if in collapsible mounts, may be used at all distances from 1½ feet to infinity. Lenses in non-collapsible mounts can be used for close-up work and, with the extension tubes, easily available, can be used for extreme close-up work. We made these in response to the hundreds of calls we have had and are sure that these are the only ones of their kind in the country.
GET YOUR ORDER IN NOW. BE AMONG THE FIRST. Kine Exakta Bayonet Set.
Consisting of one male bayonet adapter (fits into camera), one female adapter (Kine Exakta lens fits into it) and one extension tube (threaded, fits into both adapters for copying or close-up work).

The ABC's of Enlarging

(*Continued from page 61*)

blotter roll—to prevent the damaging of the emulsion.

No matter which method we use for drying, it is likely that our prints will be curled when dry (Figure 3). If they are going to be mounted, there is no need to worry about it. But if they are going to be used as they are, or in a folder, we should straighten them. This is a rather easy task. All we need are two breadboards and two C clamps. The procedure is shown in Figure 4. We take the curled prints and moisten their backs with the sponge. Be careful not to moisten the emulsion side; it has to remain dry. Place the moistened prints face to face and back to back (dry emulsion side toward dry emulsion side and moistened back toward moistened back) and put these prints between the breadboards.

Then place the two breadboards flat on the table, holding them together with one hand all the time to prevent slipping, and apply one of the C clamps to one side. Make the clamp tight, but not too tight. Then stand the boards on edge and apply the other C clamp to the other end. During this operation one hand must hold the boards together to keep the prints from moving. When both clamps are on, we tighten both as far as they go. Leave the prints in this "press" for 24 hours, and when you take them out they should be perfectly flat. If you wish, you may use four clamps instead of two, one on each corner. Of course it is more convenient to use a print press made for this purpose and sold in most photo supply stores, but it is cheaper the way we have described it above. The flattened prints should be kept under pressure all the time (in folders, between glass, in books, etc.) because if they are just left around loose, they will curl with a change in the weather. If they do, they can be flattened again as described above.

Drying and straightening of the prints is really a part of the enlarging procedure. For good results they must be given the same care and attention as any other steps in the process.—

ANSWERS TO PIX-QUIZ

(See Page 20)

1. (2) Metol, a developing agent.
2. (2) those portions of the electromagnetic spectrum affecting photographic emulsions.
3. (3) retouching small imperfections on a negative or print.

Think up some questions yourself! POPULAR PHOTOGRAPHY will send you three dollars and the original Popko drawing, suitable for framing, which is used to illustrate your quiz question. So send in your pet problems, and let's see if you can stump the experts. Unused contributions cannot be returned.

Closes Sept. 13.
Entry fee $1.
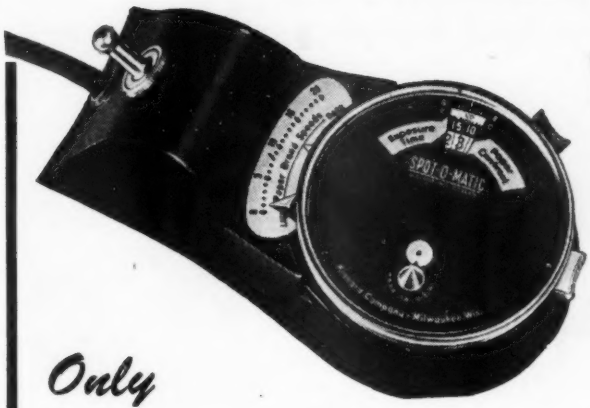
Four slides allowed.
On exhibition Sept. 30 to Oct. 3, Chicago Historical Society.
For entry form write George W. Blaha, 6240 South Artesian Ave., Chicago 29, Ill.

5th International Contest of Sporting Photographs, Provincial Athletic Club.
Closes Sept. 15.
No entry fee.
Six prints allowed.
On exhibition in October.

HOW TO Simplify and Speed Up ENLARGING!



Having trouble exposing enlargements? *Don't become discouraged!* The "error allowable" is even *less* than in exposing for color film with a camera. A variance of as little as 10% may mean the difference between GOOD and POOR prints. The problem is further complicated by the relationship between exposure, contrast grade of paper and contrast range of the negative.

Only **SPOT-O-MATIC *gives ALL the Answers!***

By providing all needed information *automatically* . . . SPOT-O-MATIC solves your biggest enlarging problems. In ONE reading it tells the correct paper to use for each negative, the exposure time required, and whether negative is over or under-developed. Has illuminated dial!

Always accurate and easy-to-follow, SPOT-O-MATIC owners say it is *indispensable.* See for yourself!

COMPLETE PRICE: . . with instructions for black and white, and color; 6-ft. cord . . . "Speed" Chart and 48-page Manual. **$9.85**

KINNARD COMPANY...760 N. Water St., Milwaukee 2, Wis.

Salon chairmen are invited to send us complete information regarding their exhibitions at the earliest possible moment so that announcement can be made in this column in time to permit readers to write for entry forms.

PRIZE-WINNING PICTURE

The International Society of Photographic Arts selected this picture of Ingrid Bergman, made by Scotty Welborne, Enterprise Studio photographer, as "The Most Provocative Motion Picture Still of 1946," according to Sam Opee, president of ISPA. The picture, titled "Invitation" is

from the film version of "Arch of Triumph." In awarding Welborne the $250 first prize, Opee stated that "Invitation," selected from more than 1500 American, British, and French entries, represented a new achievement in the creation of the "provocative mood" through masterful use of black-and-white photography.

REMEMBER ROEHRIG FOR COLOR

QUALITY OIL PHOTO COLORS!

MAGIC . . . FUN . . . THRILLS—COLOR YOUR PHOTOS WITH

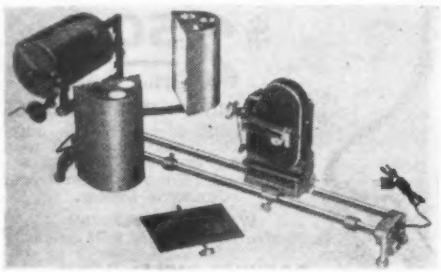
extension pipes 5, 8, and 11 inches in length, these hood shades are priced between $6.50 and $9.60. Additional information will be supplied by the manufacturer upon request.

AVAILABLE ONCE MORE after having been off the market since 1941, the Brownie Darkroom Lamp, Model B, is provided with a Series O yellow cup for safety in handling paper during printing operations. Series 2 (red) and Series 3 (green) cups also are available for use with film. Made by Eastman Kodak Co., the Brownie Darkroom Lamp, Model B, is priced at $1.25 plus tax, equipped with your choice of the three cups.

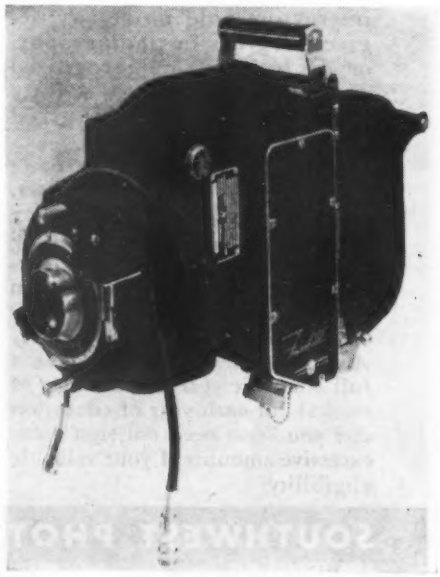
EQUIPPED WITH A wide variety of devices for producing straight and trick movie titles and animation, the new Bolex Titler can be used with an 8mm or 16mm camera. In many ways similar to an optical bench, the unit features a sliding camera mount which moves on calibrated base rods. The card-holder takes 5¾ x 8″ stock, and a flat plate is provided for holding smaller sizes in position. A scroll drum is an integral part of the assembly, and is fitted with a



Titler has variety of trick devices.

guide for accurate placement and alignment of title letters. The two light reflectors are adjustable and afford adequate ventilation for flood bulbs. For additional details concerning the new titler, write to American Bolex Co., Inc., 521 Fifth Ave., New York City.

THE PORTRAMATIC 70, using 70mm rollfilm, has been brought out by Fairchild Camera and Instrument Corp., Jamaica, Long Island, N.Y., for the convenience of portrait photographers. Using daylight-loading magazines affording 370 exposures 2½ x 3″ or 425 exposures 2½ x 2½″, the camera's automatic, remote-control operation is completed in two seconds. As the shutter blades reach full open position the electronic flash (if one is used) is discharged and the film then is advanced to the next position. The same operational cycle obtains with conventional studio lighting. The Portramatic's shutter is an Ilex Universal No. 4, with speeds from 1 second to

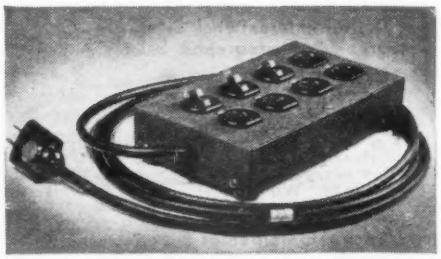


Automatic camera for portrait work.

1/100 second, and built-in synchronization. The lens is a 10-inch coated Ektar *f* 6.3, which stops down to *f* 45. Information regarding price and delivery can be obtained from the manufacturer, attention W. J. Schubert.

A WIDE VARIETY OF photographic stamps, matchbooks, medallions, and personalized pocket mirrors now is being made by the Photo Stamp Co., 40 Newkirk Plaza, Brooklyn 26, N. Y. Prices and instructions for ordering can be obtained by writing to the manufacturer at the address given above.

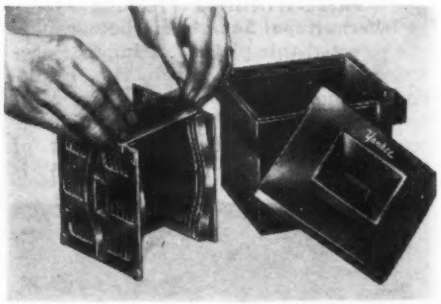
A CONTROL PANEL to facilitate the use of several electrical connections from a single wall outlet is announced by Ewart, Healy, and Koch, Inc., 248 Boylston St., Boston, Mass. Three single outlets are provided, controlled by individual switches, to-



Three single, one duplex outlet on panel.

gether with one duplex live outlet. All are flush-mounted in a box-type steel housing finished in black and red wrinkle enamel. A fused attachment plug is provided, containing two fuses rated at 15 amperes. The unit is equipped with rubber feet, and demountable keyhole clips are available for wall mounting. The price is $9.95.

A DAYLIGHT TANK for developing sheet film and filmpacks is the new Yankee, announced by Windman Brothers of Los Angeles, Calif. It will accommodate all sheet-film sizes from 2¼ x 3¼ to 4 x 5, and has a capacity of 12 negatives. Loading grooves are designed to place the film under



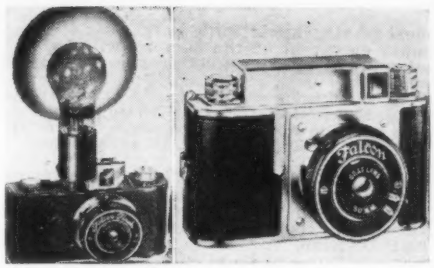
Tank takes 2¼x3¼ to 4x5 sheet film.

tension so it does not sag during development. A loading bar is provided to simplify loading in the dark. The cover contains a solution chart and directions for agitation by gentle rocking. A thermometer can be inserted directly into the solution, and the corner spout permits complete emptying. Made of black bakelite, the Yankee tank is priced at $6.95 including tax.

USING NO. 6 bayonet-base bulbs, the new flash synchronizer for the Clarus camera is light in weight and has no moving parts. Designed to work in conjunction with the synchronizing mechanism built into the camera shutter, the unit can be mounted on the camera with or without the case.

SAID TO BE CAPABLE of supporting 300 lbs. safely, the Adjusto-Stand is designed as a firm support for movie projectors. Adjustable to heights ranging from 33″ to 57″, the stand is particularly useful where the light beam must pass above the heads of an audience, and will compensate for uneven floor surfaces. Information regarding prices and other details can be obtained from Visual Education, Inc., 12th at Lamar, Austin, Tex.

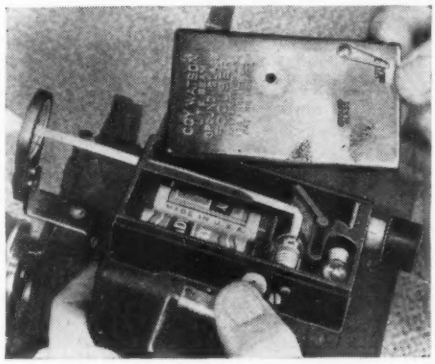
TWO NEW FALCON cameras have been announced by Camera Specialty Co. The Falcon Senior takes 16 pictures on No. 127 rollfilm, has eye-level viewfinder, two shutter speeds, and is priced at $5.50 with 50mm Graf lens or $7.50 with 50mm *f* 7.7 achromat lens. The Falcon Flash has an internally



Rollfilm cameras have eye-level viewfinders.

synchronized flash unit, 50mm Graf lens, two shutter speeds, and a collapsible eye-level viewfinder. Taking 16 pictures on No. 127 rollfilm, it has a storage compartment for additional film.

OF INTEREST TO those owning cameras of the press type is the Combination Lite Beam and Groundglass Rangefinder, designed and made by Coy Watson, 2217 Berkeley Ave., Los Angeles 26, Calif. The focusing lens conforms in focal length with the camera lens, and is mounted on the front board of the camera. Pressure on a button sends a ray of light (via a front-surface reflector) through this lens onto the subject, the sharpness of the lamp-filament image determining when sharp focus has been achieved. The same focusing lens is used in conjuncion with a small groundglass and

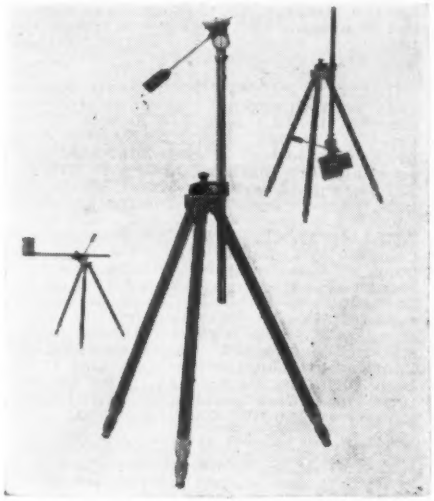


Light beam-rangefinder for press cameras.

a magnifying eyepiece to duplicate the image formed by the camera lens on the camera groundglass. Price of the Combination is $32.

CONVENIENCE IN hanging framed pictures level is afforded by a device known as Pic-Hang, manufactured by Franklin Picture Frame Co., 2019 W. Montrose Ave., Chicago 18. Priced at three for 10 cents, complete with two sizes of nails, Pic-Hang is being sold at department and chain stores.

WEIGHING ONLY 7 OUNCES, the Adjustapod can be mounted on any standard tripod having a head up to 4 inches in diameter, and provides a 17-inch extension in any direction. Its major advantage for



Arm provides 17-inch extension on tripod.

With the blue Pacific half an hour away, stimulating field trips under the direction of instructors are part of every student's training in the Fred Archer School. Widely varying locations, mountain and desert as well as seashore, are reached quickly and easily.

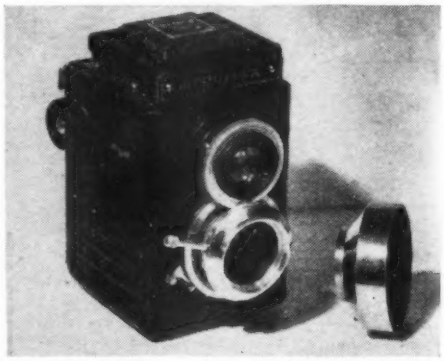
most photographic work is its provision for rapid elevation of the camera without any adjustment of the tripod proper. It can be employed with movie and still cameras, with or without pan head, and is controlled by a single thumbscrew. Priced at $5.95 plus tax, the Adjustapod is made by Arrowhead, Inc., 360 S. Navajo, Denver, Colo.

A SERIES OF EXTRA-THIN knife blades appropriate for such work as negative etching has been added to the line of hobby knives and tools manufactured by the King Kut Division, AP Parts Corp., Toledo, O. Various types of handles and adapters also are available, and complete information can be obtained from the manufacturer.

A HORIZONTAL BAR fitted with pistol grip and a standard electrical socket at each end, Trav-A-Lite is a portable floodlighting unit for use in conjunction with movie and still cameras. Constructed of aluminum and plastic, the unit is adaptable to tripod use by means of a socket in the handle base. Complete with 11-ft. cord and master switch, Trav-A-Lite is priced at $7.50 plus tax, and is made by Johnson Engineering Co., 3628 W. Pierce St., Milwaukee, Wis.

AUTOMATIC, WIRELESS control of remote flashbulbs is afforded by an electronic unit called Servo-Flash. Any desired number of "slave" units can be operated from a single master flash with positive synchronization, it is claimed by the manufacturer, Davis Electronic Laboratories, 220 S. State St., Chicago 4, Ill. Price of Servo-Flash without reflector is $24.95, plus tax.

A FOCUSING MOUNT specially designed for all Argoflex cameras, both old and new, has been announced by Super-Cam Prod-



Projecting arm facilitates focusing.

ucts, 96-32 Queens Blvd., Rego Park, L. I., N. Y. The mount comes complete with lens shade and filter-holder, for Series V filters. A projecting arm facilitates focusing with lens shade and filter in place, and the mount can remain on the camera without interfering with the case.

A SERIES OF holf-tone masks has been added to the line of Greetex accessories designed for the making of personal photographic greeting cards. The Greetax masks can be used for enlarging as well as contact work, and enable the user to print a complete card in a single exposure. A booklet on the making of photographic greetings can be obtained by writing to Greetex' manufacturer, Frederick D. Fisher, 207 East 84th St., New York 28, N. Y.

DIE-CAST HOUSING, 300-watt illumination, easy-threading film gate, and interchangeable *f* 2.4 lens are among the features of the new 8mm Excel Apollo motion picture projector. Those interested in inspecting this machine, which is priced at $37.50, should write to Excel Movie Products, Inc., Chicago, Ill., for further details.

RELIANCE ELECTRONIC Manufacturing Co., 609 W. Lake St., Chicago 6, Ill., has announced a custom-built studio flash outfit consisting of power pack and two or three flash units mounted on heavy-duty caster-equipped 12-foot extension tripods. A synchronization switch for Packard shutters is standard equipment. The three-light outfit is priced at $600, the two-light unit at $385, both including excise tax. The manufacturer maintains permanent demonstration studios at 180 W. Washington St. in Chicago.

FLEXIBLE SUPPORTS for two lights near the movie or still camera are provided by the new Voss Flexo Lite announced by Camera Specialty Company of New York. By bending the supports, different lighting

effects can be obtained—and the whole unit can be moved at once with the camera. The vertical portion provides a pistol grip for hand-held shots, threaded at the base for mounting on a tripod or pan head. Attached to the hand grip is a camera mounting-bracket and screw.

A MOVIE FILTER KIT recently brought out by Peerless Camera Stores, 138 E. 44th St., New York 17, includes a dural combination lens shade and filter-holder of either slip-on or screw-in type to fit most movie and some miniature camera lenses. The kit is available in two types: one for Kodachrome, with Type A, Photoflood, and haze filters, and one for monochrome work, with medium-yellow, green, and red filters. ASA and Weston speed ratings, filter factors, and other information are supplied with each kit, which is made of leather and plastic. The Kodachrome kit is priced at $4.49 complete, the black-and-white kit selling for $3.89. For further details, write to Peerless.

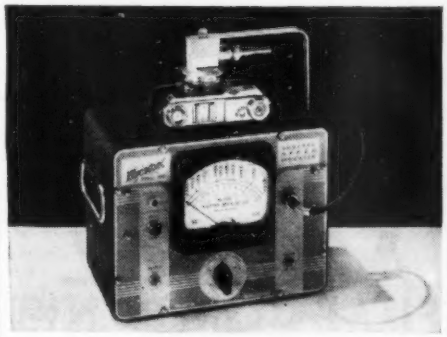
UNIFORM WHITE PRINT BORDERS without the use of masks are possible with the new Devolite-Peerless Frame-Finished paper. Before use, the paper has a greenish-yellow border; this disappears completely and automatically when the print is placed in the hypo. Frame-Finished paper is available in both Devolite and Devodark contact types, and is available from Devolite Corp., 50 Broadway, New York 4 and Peerless Photo Products, Inc., Shoreham, Long Island, N. Y., these two concerns having become affiliated.

PACKAGED IN A gold-foil envelope, Edwal 1-2-3 Developer for film and paper sells for 15 cents per package. Containing Edwal Orthazite, an envelope of the new developer will make 1 quart of solution for contact printing, 2 quarts for enlarging, or three quarts for film development. Further details can be obtained from Edwal Laboratories, Inc., 732 Federal St., Chicago 5, Ill.

USED DURING THE WAR as a dehydrating agent to prevent rust on ordnance equipment, De-Moist now is available for absorbing moisture in basements, darkrooms, paper and film lockers, etc. A 12-oz. package is priced at $1.29, and can be used repeatedly by means of drying in the oven. Manufacturer is the G. N. Coughlan Co., 29 Spring St., West Orange, N. J.

GENUINE LEATHER albums in saddle tan, green, red, and blue are being offered by Amberg File and Index Co., Kankakee, Ill. Sizes to accommodate 5 x 7, 8 x 10, or 11 x 14 prints are available, with or without acetate sheet protectors, at prices ranging from $5 to $18.

OF SPECIAL INTEREST to retailers, camera repair shops, newspapers, and others who often have occasion to check shutter speeds is the new Shutter Speed Meter announced by the Hickok Electrical Instrument Co., 10581 Dupont Ave., Cleveland 8,



Meter measures speed of shutter.

MODEL FILM COMPANY
723 SEVENTH AVE., NEW YORK 19, N.Y.

Ohio. It measures the speed of any shutter, showing the actual duration of the exposure at any setting.

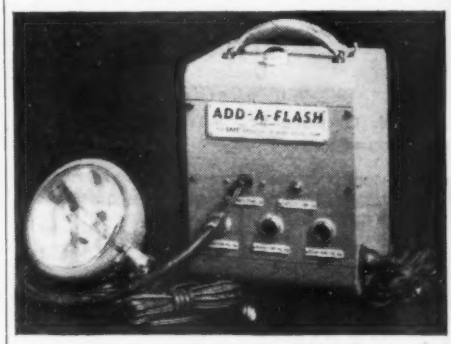
A SERIES OF SUNSHADES and filter mounts for Series V, VI, and VII filters, designed to accommodate Omag, Wratten, and other standard filter disks, has been announced by Chess-United Company, Inc., Emmet Bldg., Madison Ave. at 29th St., New York 16, N. Y. The mounts are made of solid brass, satin-finished and chrome-plated. The lens shades are made of satin-finished Dural, with interiors black-flocked to prevent stray light reflections. Prices of the shades are: Series V, $2.15; Series VI, $2.60; Series VII, $3.75, tax included.

Filter mounts for Series V, VI, and VII.

Mounts are: Series V, $1.25; Bayonet, $1.85; Series VI, $1.75; Series VII, $2.40, tax included. Additional information is available from Chess-United at the above address.

A NOVELTY ITEM recently announced by Plastigraph Corp., 45 Fifth Ave., New York, N. Y. is a Plexiglas picture frame in which photographs can be mounted permanently, sealed in plastics. Called the Keepsake method, this process provides mounts in four styles including book-ends and paper-weights. Further information is available from the manufacturer.

ADEQUATE CAPACITY to handle three flashtubes is claimed for the new Add-A-Flash Model II, which is doubly-fused for protection and which has a safety circuit for neutralizing the high-voltage charge as soon as the current is shut off. With a single



Unit can handle three flashtubes.

lamp of the G-E sealed beam type, the unit produces a 1/10,000-second flash comparable in output to that of a No. 22 flashbulb. A 60-watt glare-free modeling flashtube is available for predetermining the lighting arrangement. The power unit, with three outlets, is priced at $145 including tax, sealed beam assemblies listing at $39.50 each. Price of the modeling tube unit is $64.50. Manufacturer is Electronic Specialties, Inc., 2643 E. Dauphin St., Philadelphia 25, Pa.

MALLINCKRODT PHOTO Bulletin No. 63, on the subject of children's photographs, has been released. It contains several interesting pictures of young children, together with technical data and formulas. Those interested in the bulletin should write to Mallinckrodt Chemical Works, Mallinckrodt St., St. Louis 7, Mo.

A COMPLETE LINE OF translucent screens for rear-projection, process shots, and similar photographic uses, is being made under the trade name of Klearcite, by the Fowler Company, 750 S. Wabash Ave., Chicago, Ill. For details regarding price and size, write to the manufacturer.

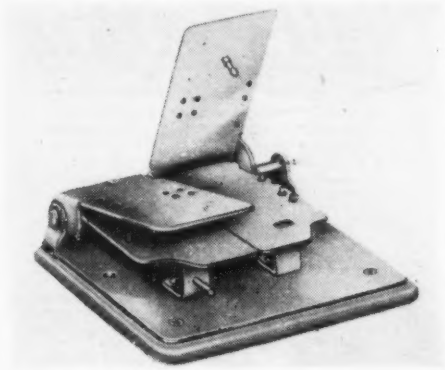
front and rigid construction, and will accommodate line cord, extra reels, and spare lamp. Priced at $9.95, the case is distributed by Arel, Inc.

NOW OFFERED IN concentrated liquid form, the improved Kodak Photo-Flo is a wetting agent having many photographic uses. It is bottled in 4-ounce, 8-ounce, and 32-ounce sizes, and is intended for 1 to 200 dilution.

THE MARVEL BABY POSER is a seat-like affair which can be set on a table or bench, and has holes in the sides through which a parent's arms can be inserted to support a very young infant. Weighing only 5 lbs., the Baby Poser is priced at $8.50, and is a product of Stern & Company, 1118 Grand Ave., Kansas City 6, Mo.

A STAINLESS STEEL splicer for both 8mm and 16mm movie film has been announced by Bolsey Corporation of America, 118 E. 25th St., New York, N. Y. The scraper is said to be a replica of a machine tool file, which shaves emulsion smoothly off of the film base, and working surfaces are unusually ample for ease in locating the



Splicer has ample working surface.

film properly. Mounted on a solid wooden base with rubber feet, the Bolsey splicer is priced at $13.50.

INEXPENSIVE DIFFUSERS for flash and flood reflectors are provided in a new line announced by Martin Products Co., 288 Flushing Ave., Brooklyn 5, N. Y. They are made of a non-woven, plastics-like material known as "Viskon," which can be folded, crushed, and even washed without harm. A sewn-in elastic edge holds the diffusers in place. Prices are as follows: 5-inch and 7-inch sizes, 25 cents; 10-inch and 12-inch, 40 cents; 14-inch, 65 cents; 18-inch, $1.00.

A CONVERTER to permit operation of Lektro cameras on 105 to 120-volt, 60-cycle AC current now is available from Associated Photo Products, 152 West 42nd St., New York, N. Y. Called the Powr-Savr, this unit is priced at $22.50 and can be used with any model Lektro camera.

LENS HOODS and adapter rings of turned and polished aluminum, threaded to make them interchangeable with standard Series V, VI, and VII filters and hoods, are being distributed by Ponder & Best, Inc., 1230 S. Grand Ave., Los Angeles 15, Calif. Additional information is available from photo dealers or by writing the distributors at the above address.

AN ADAPTER BACK for converting plate-back cameras in the centimeter sizes to take standard double holders has been announced by Hollywood Photo Mfg. Co., P. O. Box 1454, Beverly Hills, Calif. Called the Feather Lite Adaptor, this device provides a spring back which automatically places the ground-glass in the film plane when the holder is withdrawn. Made of lightweight aluminum plate, it is available in three sizes to convert 9x12 cm to 3¼x4¼, 9x12 cm to 2¼x3¼, and 6.5x9 cm to 2¼x3¼. All sizes are priced at $14.95 including tax, and are available at photo dealers. Distributors are American Photo Industries Co., Inc., of New York, Farnan & Seeman, Inc., of Los Angeles, Intercontinental Marketing Corp., of New York and Chicago, and Lenco Photo Sales of Detroit.

A FOCUSING AID for owners of the Hugo Meyer coupled rangefinder is the Focalite, an accessory which projects light through the rangefinder system. When the two light beams coincide on the subject, focus is correct. It can be installed on any Hugo

Sensational

"For many years I've been using a filter, built on the same idea as the 'Hollywood Glamour Filter, and I think it will improve any still photographer's pictures to a great extent."

Joe Valentine
One of Hollywood's Most Famous Cinematographers

The subject of your photograph will be glamourized thru our filter and it will eliminate the necessity of retouching. The H.G.F. is nothing new in cinematography where the same system has been used for many years. Now, for the first time H.G.F. is on the market for use in still photography.

Send us the description of your camera and the exact size of your lens. (Outside measurement).

You will receive the H.G.F. which will fit your lens perfectly.

Meyer coupled rangefinder, including those on cameras already in use. Additional information is available from the manufacturer, Hugo Meyer, Inc., 39 West 60th St., New York 23, N. Y.

MICROFILM USERS will be interested in the AMIC microfilm reader manufactured by American Measuring Instrument Corp., 240 West 40th St., New York, N. Y. It is available in two models—A for 35 mm and B for 16 mm. Both employ a 12x12 screen. Additional information is available from the manufacturer.

ADJUSTABLE TENSION is provided by the film clip employed in the new Carr stainless steel film hangers manufactured by Carr Associates, 8637 Washington Blvd.,

THREE-POINT AGITATION is provided by the new Yankee Agitray, manufactured by Windman Brothers, Los Angeles 23, Calif. Three small buttons on the bottom of the tray facilitate agitation, and also permit the tray to rest flat on an uneven surface. Made of Bakelite, the trays are available in 5x7, 8x10, and 11x14, in black or white.

A BLOTTER ROLL which offers some features of the blotter book is the Kwik-Dry Print Roll announced by Martin Products Co., 288 Flushing Ave., Brooklyn 5, N. Y. It employs a new lintless, absorbent material known as Viskatex. Seven sheets of this material, each 11½x17, together with a slightly larger corrugated cover, are fastened to a heavy cardboard center tube. When open, the roll lies flat for insertion of prints. It provides drying surface for 12 8x10 prints or the equivalent. The price is $1.25.

A RIGID CASE custom built to carry the Bush Pressman, Argoflex, and most movie cameras, together with many accessories, is the Nasco camera and gadget case offered by Nathan Schectman, 228 W. Houston St., New York 14, N. Y. It is made of kiln-dried lumber and plywood, with sturdy lock corner joints. Inside smooth rayon flock lines the compartments to protect the equipment being carried. The case is available in assorted colors and fabrics.

A FLASH OUTFIT for use with the Brownie Reflex camera has been announced by Camera Specialty Co., Inc., 50 West 29th St., New York 1, N. Y. It is the Peak Flash, compact in design with metal reflector and palm-size battery case. It comes complete with an L-bracket for fastening to the camera and connector wire and plug at $3.98 plus tax.

A PORTABLE SINK for the darkroom is announced by H. M. Wigg Company, 308 E. 53rd St., New York 22, N. Y. Made of thermo-setting plastics and stainless steel, it is easily cleaned and can be hooked up with rubber hoses for portable use or built into a permanent darkroom. It is 3 feet long, 18 inches wide, and 4½ inches deep inside with a 6-inch splash back. The price is $65.00.

LOW-COST MOVIE FILM for Univex users again is available, Universal Camera Corporation has announced. The Univex 100-Standard 8 mm movie film is anti-halo coated and sells at 85 cents per roll, including excise tax.

AN AMATEUR MODEL of the Terado "Ruby-Glow" timer is available in addition to the professional model described in this column in the May issue. The two models are similar, except that the professional model has a 1500-watt capacity and is priced at $24.95, while the amateur model has a 600-watt capacity and sells for $19.95.

AN IMPROVED MODEL of the Wirgin Pole Tripod now is available, it was recently announced by Camera Specialty Co., Inc., 50 West 29th Street, New York, N. Y. The chrome-plated tubular pole in the center gives added stability, and can be raised and lowered to change the camera height without adjusting the legs. Each leg is attached to the center lock by steel chrome-plated braces, and the leg tips are made of alumilite and have reversible rubber tips. The tripod measures 25 inches long when closed, and 52 inches high when extended. The price is $17.50 plus tax.

A SIDE LIGHTING UNIT for use with the Universal Flash Synchronizer, Press Synchronizer, and D-B Flashing Unit has been announced by DeMornay-Budd, Inc., 475 Grand Concourse, New York 51, N. Y. The unit consists of a standard flashbulb holder, complete with bulb ejector and provision for the accommodation of either the Deluxe or

Standard D-B reflectors and safety shields. It is mounted on a spring clamp with ball-and-socket joint, and comes complete with a 15-foot extension cord at $12.50, including tax.

A NEW SCREEN in the low-priced field is the Model Q, recently announced by Radiant Manufacturing Corp., 2627 Roosevelt Road, Chicago, Ill. A tripod model, it is equipped with a self-locking device for lowering and raising the extension rod to adjust for screen height. It is manufactured in the 30x40 and 40x40 sizes, for projection distances of 10 to 15 feet with average equipment.

NEWS NOTES: Fairchild Camera & Instrument Corporation's new Cartographic Camera accommodates a 180-ft. roll of film with capacity for 250 9 x 9" exposures. The between-the-lens shutter, with speeds of 1/100, 1/200, and 1/300 second, can be removed without disturbing collimation of the lens in use.

Utilizing an overpowered actuating coil for fast, positive action, a relay for the firing of speedlight tubes has been brought out by Potter & Brumfield Sales Co., Chicago. Specially constructed to withstand moisture absorption, the relay is available in all contact combinations.

A good portable source of high voltage is afforded in the new 300-volt Eveready No. 493 battery which weighs 1 lb., 1 oz. Six or seven of these units will supply adequate voltage for most flashtubes.

The Amphibious Motion Picture Service recently put into operation by Benton Black of Chicago's Educational Projection Service is engaged in delivering projectors, films, and screens direct to hotels, camps, and resorts, via land or water. Black uses a Seabee amphibian for this purpose, and in addition has a specially-fitted automobile available for shorter hauls.

Moviette, Inc., 366 Madison Ave., New York City, has introduced a snap-on hand-finished picture frame for use with the Vuette Illuminator for transparencies and slides.

For the first time in six years, Central Camera Co., 230 S. Wabash Ave., Chicago 4, Ill., has brought out a new edition of the Central catalog, a 48-page condensed version of the almanacs published prior to 1942. Copies are available free upon request to Central.

A reduction in price for the Thalhammer B/L Tripod and head, from $39.16 including tax to $24.50 including tax, has been announced by Craig Manufacturing Co., 1823 S. Hope St., Los Angeles 15, Calif.

Users of the Mult-Efex Titler will be interested in a new booklet containing instruction and suggestions. To obtain a copy of the booklet, write to Bardwell & McAlister, Inc., Box 1310, Hollywood 28, Calif.

A new line of voltage regulation units, called Nobatrons, have been announced by Sorensen & Company, Inc., 375 Fairfield Ave., Stamford, Conn. They provide amperages of 5, 10, or 15, with output voltages of 6, 12, or 28 respectively.

The Streamliner, a new high-speed positive printing machine which employs dry developing, has been announced by Ozalid Division of General Aniline & Film Corp.

A new machine for mass production of color enlargements at high speeds has been announced by American Photographic Appliance Corp. of Greenfield, Mass.

Dritek, the moisture-absorbent chemical that was packed in overseas shipments of instruments during the war, now is being distributed in the East by Camera Specialty Company of New York.

A printing cabinet for making contact prints on P.O.P., called the Sun Proof Cabinet, has been announced by Garden and Williams, 3266 West Pico Blvd., Los Angeles 6, Calif. It employs blue fluorescent tubes.

Summer dampness can be eliminated from the darkroom with Drier Outer, now available in a metal container that also serves to collect the water taken from the air. Closet size is 89 cents, basement size $2.49, and giant basement size, for several rooms, $3.98.

As a result of expanded facilities and streamlined manufacturing methods, Da-Lite Screen Co., Inc., sends word that 1947 prices on their screens will remain equal to or lower than those charged 10 years ago for similar sizes and models. O. N. Wilton, general sales manager, anticipates an all-time high in sales for Da-Lite this year.

Because of the extreme difficulties presented by the present exchange situation, Ansco may set up manufacturing facilities in Europe to supply the demand for the company's products abroad. According to E. A. Williford, Ansco general manager, who recently returned from a European

business trip, the shortage of American dollars overseas makes it impossible for many countries to import the required volume of this nation's products.

A new 24-page catalog and reference book has just been put out by Radiant Manufacturing Corp., 2627 W. Roosevelt Rd., Chicago. Copies are available from Radiant upon request.

Formerly handled by Vard, Inc., Opticote lens-coating now is being performed by Ray Campbell & Co., of Los Angeles. The Campbell organization has acquired the equipment used heretofore by Vard, and now has greatly increased production facilities.

A new, standardized system of nomenclature for its lenses has been adopted by Eastman Kodak Co. The Ektar will continue to be the top product; the name Ektanon will be used for lenses which approach the Ektar in quality; and front-element focusing lenses of the four-element and triplet variety will be known as Anastars and Anastons, respectively. Such lenses as the Kodar, Kodet, and Twindar will continue to be known by those names.

A new line of photographic products is to be brought out under the Peerless trade mark by Peerless Camera Stores, 138 E. 44th St., New York 17, N. Y. Functional packaging and the inclusion of survey-tested features will distinguish these products, it is learned.

Guide sheets including diagrams and instruction on camera technique, posing, backgrounds, and child psychology are available at $1 per set for those who specialize in photographing children. For details, write to Guide-Pix, 147 Fourth Ave., New York 3, N. Y.

Wage increases and other boosts in manufacturing costs have forced General Electric Company's Lamp Department to make the 5 per cent Federal excise tax on lamps payable by the consumer henceforth. Apart from the tax, however, average prices on GE lamps will be leveled off at 5 per cent below prewar prices.

PERSONALS: Newly-elected president of Ampro Corp., Chicago, is A. J. PALMER, who has been a well-known figure in the 35mm movie industry for the past ten years. . . . Wide experience as a production executive is among the qualifications of MATHEW J. BETLEY, newly-appointed plant superintendent for Radiant Manufacturing Corp., Chicago. . . . At the request of President Truman, THOMAS J. HARGRAVE, president of Eastman Kodak Co., will head up the Army-Navy Munitions Board as executive chairman. As a machine-gun captain in World War I, Mr. Hargrave won the D.S.C. and the Croix de Guerre, and his guidance of Eastman's large and complex activities in World War II renders him well-fitted for the munitions board post. . . . Tikern Corp., Brooklyn, N. Y., has appointed as general manager IRVING L. LITTY, who has extensive experience in retail merchandising. . . . Having had many years' experience in sales promotion, and in motion picture writing and production, GEORGE LONG has taken over the Midwest territory for Radiant Manufacturing Corp. . . . After 32 years as Ampro head, AXEL MONSON has retired from active duty to become board chairman. . . . Recently added to the sales staff of Universal Camera Corp. are the following: JACK WELEBA and JOSEPH DOLBEER, Hollywood office; J. WALKER BEEGHLY, New York, Ohio, and Pennsylvania territory; ROBERT E. HARPER, Chicago office; ALVIN C. GECKS, Michigan office; and WILLIAM A. LLOYD, New York office. . . . Manager of Victor Animatograph, Ltd., STANLEY GORRIE recently came over from London to visit the Davenport offices of the Victor firm.

WINDOW SHADE SERVES AS BACKGROUND

If your walls are not suitable for backgrounds and you do not have room to store backgrounds of adequate size, use a duplex (light on one side, dark on the other) window shade hung over a doorway. Mount the roller hooks in the top of the door casing and when a background is needed, simply pull the shade down over the doorway. Two opposite sets of roller hooks should be installed so that you can change the background from light to dark by turning the shade end for end and attaching it to the proper set of hooks—*Kenneth S. Johnson, Binghamton, N. Y.*

CONTESTS MARKETS

CONTESTS

GRAFLEX, INC., Rochester 8, N. Y., announces the $5000 Third Graflex Photo Contest. Closing Oct. 1, 1947, the 1947 contest is divided into the following groups: A, teen-age photographers; B, non-professional photographers; C, professional photographers; color section, open to all groups of photographers. First, second, and third prizes in the A group are $250, $150, and $100 respectively. In the remaining groups, first wins $500, second $250, and third $150. A special press award is open to all groups. Any pictures taken with a Graphic, Graflex, Crown, or Century camera may be entered in this contest, and you may submit up to ten black-and-white and five color photographs. Obtain full contest rules and entry form from your local dealer.

MECHANIX ILLUSTRATED magazine offers color photographers $300 for the six best color transparencies or prints received before Sept. 30, 1947. First prize is $100, second $75, third $50, and the remaining three winners receive $25 each. All entries should include picture data and return postage. Entries should be mailed to the Color Photo Editor, *Mechanix Illustrated*, 67 W. 44th St., New York 18, N. Y.

THE MON BLANC CHEMICAL CO., Fort Wayne, Ind., and Spearman, Texas, makers of Von-L photo chemicals, announce the first Von-L photo contest. Cash awards totaling $1100, as well as merchandise prizes, are being offered in the contest, which closes midnight Oct. 14, 1947. Judges of the competition are Harry K. Shigeta, Rus Arnold, Anne Pilger Dewey, and Dr. R. H. Von Leidtke. Further information and entry forms are available at your local dealer.

THE OKLAHOMA CAMERA CLUB is awarding $100 in cash awards for the three best pictures made during the 1947 PSA convention and exhibition in Oklahoma City from Oct. 8 to 11, 1947. Only PSA members attending the convention are eligible to enter the contest, and the last day for receiving entries is Dec. 1, 1947.

THE WM. R. WHITTAKER CO., LTD., 915 N. Citrus Ave., Los Angeles 38, Calif., is giving away 10 merchandise prizes valued at more than $500, to the monthly winners of their world-wide photographic contest for Service personnel.

JACKSON & PERKINS CO., rose growers, is conducting a garden photographic contest for the best pictures showing roses or perennials being used in any way. Grand prize is $500. Eight other awards are $100 each, and there are 28 additional prizes of rose plants. The competition closes Oct. 15, 1947. For further information, write the Photographic Contest Editor, Jackson & Perkins Co., Newark, New York.

SEAMEN'S CHURCH INSTITUTE, 25 South St., New York 4, N. Y., is offering $25, $15, and $10 for the three best photographs of shipboard scenes submitted by active merchant seamen only. Glossy 8x10 black-and-white prints are preferred for the contest, which closes Dec. 1, 1947.

ALLSPORTS magazine is conducting a $1500 contest for the best sports pictures of 1947. First prize is $500, and the remaining ten honorary awards will bring $100 each. Open to all photographers, the contest closes Dec. 1, 1947. All pictures submitted must be 8x10 glossy. For further details, write Best Sports Picture Contest, *Allsports*, 431 Howard St., Detroit 31, Mich.

PAN-AMERICAN COFFEE BUREAU invites all professional photographers to enter the Coffee News Pix Contests for published pictures in which coffee plays a newsworthy part. Any news picture showing coffee, which has been published in a newspaper, magazine, house organ, etc., is eligible. The competitions close on June 30 and December 31. Glossy print of photograph must be submitted together with clipping as evidence of publication, and there is no limit on the number of entries from any pho-

tographer. Announcement of winners will be made semi-annually after the close of each contest, and a grand yearly prize, as well as the half-yearly prizes, will be awarded. For complete information address Coffee News Pix Contest, Suite 1448, 60 East 42nd St., New York 17, N. Y.

THE ALBERTA GOVERNMENT TRAVEL BUREAU is offering medals and cash awards totaling $1000 for pictures of vacation activities taken during 1947 in Alberta. The medals will go to the winners of the first, second, and third prizes of $300, $200, and $100, respectively. Other prizes range from $75 to $10. The bureau reserves the right to purchase for $2 negatives and prints which do not win prizes. Photographs submitted must be accompanied by a descriptive paragraph. The contest closes Dec. 31, 1947. For further information, write the bureau at the Legislative Building, Edmonton, Alberta, Canada.

MARKETS

TOPPER magazine, Wilson and Chestnut Sts., Hazleton, Pa., is in the market for sharp glossy 8x10 black and whites of young children, domestic animals, or a combination of the two. Pictures for cover use will earn $10 each, and other photographs accepted will be paid for at the rate of $5 each. Photographs to be returned must include self-addressed stamped envelope.

BROOKSTAR PHOTOS, 617 Main St., Buffalo, N. Y., needs all types and classes of photographs for advertising purposes. Black and whites should be 8x10 glossy and include caption information; price is $5 and up, payable on acceptance. Demand is greatest for landscapes, scenic settings, sports, and human interest. Prints marked "stock file," if not accepted at once, will be filed or sold on a 50-50 basis. Otherwise all prints with return postage will be sent back.

FPG, INC. (Free-lance Photographers Guild, Inc.), 219 E. 44th St., New York 17, N. Y., is interested in hearing from photographers capable of producing good quality Kodachromes covering all subjects. Prices range as high as $500 for outstanding work, and 4x5 or larger negative size is preferred. Prompt opinion given of work submitted. Especially desired are shots of pretty girls, babies, children, animals, farm scenes, action, sport scenes, and scenics. They also can use top caliber color layouts.

WOLLENSAK OPTICAL COMPANY, Rochester, N. Y. is in the market for color transparencies and black-and-white prints taken with a Wollensak lens. Photographs purchased will be used for advertising purposes, and payment will be made for all pictures accepted. Technical data should be included. Exclusive rights are not desired. Material should be sent to Ed Wolff & Associates, 428 Taylor Building, Rochester 4, N. Y., and on request, they will furnish free an explanatory folder titled *How Wollensak Chooses Illustrations.*

ANSCO, Binghamton, New York, is purchasing black-and-white negatives and transparencies made on Ansco film. Almost all types of subject material are desired, with the story-telling, human interest shots having preference. Payment is made on acceptance. In the case of black-and-white pictures, small enlargement prints should be submitted—not the original negatives. Selections will be made on the basis of technical excellence, composition, and subject interest.

RAY SHAW, internationally famous sculptress of hands is preparing a book on the importance of hands, in shaping our lives and desires photographs of hands in action, at rest, expressing emotions, dexterity, etc. For further information, write William S. Cole, Ray Shaw Studio, 1366 Sixth Ave., New York 19, N. Y.

GLOBAL FEATURES SERVICE, 47 West 56th St., New York 19, N. Y., desires series and feature photographs of activity in the U. S. This material will be distributed overseas. They can also use fashion and glamour Kodachromes, black-and-white glamour shots, etc. Payment for accepted material is on a 50% basis on publication. Include postage and return envelopes for unsuitable photographs.

VINCENT & JOHNSON, P.O. Box 451, Neosho, Mo., will market black-and-white photographs—human interest, winter scenes, farm, industry, people, spot news—at a 50% commission basis. Pictures will be used for covers, advertising, and payment is made

after the prints are sold. They also desire Kodachromes 3¼x4¼ or larger and will pay 60% to the contributor. Subject matter should be suitable for calendars, advertising, magazines, etc.

SUN-UP, a new home and garden magazine, can use photographs on a wide variety of subjects, such as how-to-do layouts, flower arrangements, gardening, landscaping architecture, outstanding scenic spots in the South, home decoration, and outdoor living. Cover pictures of pronounced scenic beauty and of human interest are desired. Payment is $3.00 and up upon acceptance of each picture. Layouts will be paid for on an individual basis depending on value to the magazine. For full information write Kenneth Kitch, Managing Editor, *Sun-Up* magazine, 4th Floor Moore Bldg., San Antonio 5, Texas.

ROTOR, a house organ published by the Peerless Electric Company, Warren, Ohio, will buy outstanding human interest and seasonal landscape pictures. All prints must be glossy, 5x7 or larger, and black and white. Payment depends upon type of picture. Mail photographs to *Rotor* Editor, Peerless Electric Company, 1401 W. Market St., Warren, Ohio.

AUSTIN SLIDE COMPANY, 1403 W. 6th St., Austin 21, Texas, wants 500 original transparencies of monuments and scenes in the various national parks in the United States. From $1 to $5 will be paid for each transparency accepted. Sizes larger than 35 mm are desired, but 35 mm will be purchased if they are exceptionally good.

RELIGIOUS NEWS SERVICE is in the market for inspirational photographs adaptable for cover-page use. Theme of composition must be of nature suitable for religious publications and glossy 8x10 prints desired. From five to ten dollars will be paid for those accepted. Address the Service at 381 Fourth Ave., New York 16, New York.

THE THOMPSON CO., 1146 North Waco, Wichita 5, Kansas, wants 8x10 glossy photographs for photomurals. All subjects are needed, and prints are placed in files from which clients select pictures for photomurals. Copyrights are not wanted, and $3.00 will be paid for photographs used. No pictures will be returned.

BRICK AND CLAY RECORD, 59 E. Van Buren St., Chicago 5, Ill., desires glossy 4x5 (or larger) photographs of modern constructed (built within last five years) factories, hotels, churches, or any structure wherein clay products are used. Photographs may be over-all views or closeups of brick details, and caption material should include names of architects, contractors, and brick manufacturer. Payment is $3 to $5 per photograph on acceptance.

CENTRAL PRESS ASSOCIATION, 1435 East 12th St., Cleveland, Ohio, will purchase spot news and feature photographs of nation-wide interest at $5 each or $3 in a series of more than two. Either negatives or prints may be submitted. Material returned promptly if not usable.

SHERMAN PAPER PRODUCTS, Newton Upper Falls 64, Mass., will buy black-and-white photographs of scenic settings, sports, or human interest shots having seasonal interest appeal for retail store window advertising. Submit any size prints and include return postage.

BRADY DRAKE PHOTO COPY COMPANY, 623 Chestnut St., St. Louis, Mo., wants photographs that can be used to make photo murals for public buildings. Pictures can be scenic, architectural, or landscape. Brady Drake will pay $1 for each negative they keep and $5 every time they use it.

CORONET MAGAZINE invites contributions of black-and-white vertical photographs of unusual beauty, drama, or general appeal and color shots rich in human interest or beauty. Subject matter is unlimited, and entries must be accompanied by return postage and packaging. Top prices will be paid for reproduction rights and credit will be given. Send photographs to Picture Editor, *Coronet Magazine*, 366 Madison Ave., New York 17, N. Y.

A. DEVANEY, INC., 227 E. 47th St., New York 17, N. Y., can furnish outstanding cameramen with an immediate market for black-and-white negatives and Kodachromes of any subject except spot news and personalities. Immediate payment will be made, and negatives submitted should be 4x5 or larger. Worthwhile material may be handled on royalty.

LEARN PHOTOGRAPHY THE CORRECT WAY

ROBT. L. WOODARD
President
DAVID H. FISHMAN
Director of Instruction
J. OTTO CADIEUX
Senior Instructor

APPROVED FOR TRAINING UNDER G. I. BILL

Opportunities in the photographic field are constantly expanding. Realizing that there was a real need for a place where serious students could get professional training that would equip them with confidence and skill, we have established a school which is dedicated to fill that need with the highest standards of accomplishment.

R. L. WOODARD

A school is only as good as its instructors. Our modern equipment and extensive facilities would not be effective without the ability, experience and inspiration of our instructors.

FOR *INVISIBLE* RETOUCHING
of Kodachrome Prints

Webster Photocolors, specially processed to work in gelatin, leave nothing on the surface. Thus they are ideal for retouching color prints from color transparencies, and for retouching the transparencies themselves. **Introductory Set** of 15 colors and *Dye-Proofing* (the liquid frisket) in ⅛ oz. bottles, with Manual, **$3.75** postpaid. Order from local dealer or **Webster Brothers Laboratory, 53 W. Jackson Blvd., Dept. P-7, Chicago 4.**

FREE Color Chart

WEBSTER PHOTOCOLORS

An unbeatable pair for 8mm movies

Filmo Sportster

So simple to use that even beginners get beautifully clear, brilliant 8mm movies with it, in full natural color or black-and-white. So versatile that it delights advanced enthusiasts, too. Features include four film speeds, single-frame exposure control for animation work, ½″ F 2.5 Filmocoted lens, instant lens interchangeability, and viewfinder masks matching telephoto lenses. A built-in exposure calculator covers every outdoor condition. Filmo Sportster is easy to load—film literally drops into place. Your dealer has it now or can get one for you quickly.

Filmo Picture Master

An all-new 8mm projector with every feature you could ask! Offers more brilliant illumination than any other 8mm projector, *bar none.* Base-up lamp gives maximum light longer. Has fine F 1.6 Filmocoted lens, reverse mechanism, "wind-tunnel" cooling, self-locking tilt, automatic power rewind, and gear-driven film take-up. Pilot lamp, hinged film gate, and exclusive B&H Safe-lock Sprockets and guards make threading easy and sure. Single frames may be projected as really brilliant "stills" with complete safety. 400-foot film capacity. Order from your dealer now for earliest delivery.

1907 40th ANNIVERSARY 1947

Kodak 35 with range finder

. . . the more-for-your-money miniature

If you're having trouble in reconciling what you want in a miniature with what you can afford to pay—step up to your Kodak dealer's counter and meet Kodak 35 with range finder

There are mighty few pictures . . . either in color or in black-and-white . . . that you can't handle beautifully with this fine miniature.

Lens is Kodak Anastigmat Special *f*/3.5 . . . *Lumenized* (ultrahard-coated the Kodak way) to banish flare and "ghosts" . . . well corrected for greater color purity. Coupled range finder is split-field type for fast, accurate focusing . . . needle-sharp negatives.

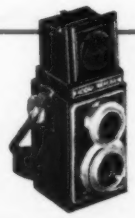
When night comes, you can keep right on going . . . still in color or black-and-white. Just slip on an inexpensive Kodak Flasholder. That *f*/3.5 lens and 1/200 Flash Kodamatic Shutter with built-in synchronization won't let you down. Automatic film stop . . . double-exposure prevention . . . automatic shutter setting. And the price, you'll find, is decidedly reasonable for so expert a miniature . . .

EASTMAN KODAK CO., ROCHESTER 4, N. Y.

Color and "flash" shots with these models, too

Kodak is making more cameras than ever before, but the demand is greater, too. Consult your dealer.

Kodak



KODAK REFLEX— leading medium-priced twin-lens reflex.

KODAK MEDALIST II— precision-built, highly versatile.

KODAK BANTAM (*f*/4.5)—handles with delightful ease.

KODAK VIGILANT SIX-20 (*f*/4.5)— an instant hit.

You'll be Amazed WITH THE PERFORMANCE OF WOLLENSAK'S NEW *Raptar* LENSES

IMPROVED DESIGN — IMPROVED RESULTS

● New methods of manufacture and control . . . new electronic testing and inspection instruments . . . Wollensak has jumped years ahead in the science of making fine photographic objectives to bring you this entirely new series of Raptar lenses. You don't have to be a professional to notice the improvement. Greater resolving power gives you pinpoint sharpness. WOCOTED surfaces open up new camera angles without the old fear of ghost images or haze. And color? Wait until you see the results. In fact, once you try a new Raptar lens, you won't be satisfied with less. Enjoy the advantages of superior lens performance. *Your dealer knows. Ask him* about Wollensak Raptar lenses for your still and ciné cameras; enlarger and projector.

Wollensak

For Movies, Candid, Enlarging, Action, Stills
